Culture Media for Food Microbiology J.E.L. Corry,G.D.W. Curtis,R.M.

Baird,1996-04-23 This publication deals in depth with a limited number of culture media used in Food Science laboratories. It is basically divided into two main sections: 1) Data on the composition, preparation, mode of use and quality control of various culture media used for the detection of food borne microbes. 2) Reviews of several of these media, considering their selectivity and productivity and comparative performance of alternative media. Microbiologists specializing in food and related areas will find this book particularly useful.

Basic Techniques in Biochemistry, Microbiology and Molecular Biology Aakanchha Jain,Richa Jain,Sourabh Jain,2021-03-14 This book presents key methodologies, tools and databases for biochemistry, microbiology and molecular biology in simple and straightforward language. Covering all aspects related to experimental principles and procedures, the protocols included here are brief and clearly defined, and include essential precautions to be taken while conducting experiments. The book is divided into two major sections: one on constructing, working with, and standard operating procedures for laboratory instruments; and one on practical procedures used in molecular biology, microbiology and biochemical analysis experiments, which are described in full. Each chapter describes both the basic theory and relevant practical details for a given experiment, and helps readers recognize both the experiment's potential and limitations. Intended as an intensive introduction to the various tools used in molecular biology, the book covers all basic methods and equipment, including cloning, PCR, spectrophotometers, ELISA readers, sonicators, etc. As such, it offers a valuable asset for final year

undergraduate (especially project) students, graduate research students, research scientists and technicians who wish to understand and employ new techniques in the field of biotechnology.

Handbook of Culture Media for Food and Water Microbiology Janet E. L. Corry, G. D. W. Curtis, Rosamund M. Baird, 2011-12 A reference for microbiologists wanting to know which media to use for the detection of various microbes in foods and how to check their performance.

Digital Culture & Society (DCS) Tim Hector, David Waldecker, Niklas Strüver, Tanja Aal, 2023-09-30 Modern mundane life is brimming with a variety of data-driven technologies that are supposed to augment the practices they are involved in. As humans bring these technologies into their lives in a process of domestication, they tame them and are

simultaneously influenced by their presence. In combining domestication research and an empirical analysis of current, digital, and interconnected media, this issue examines the process of taming with an emphasis on practices. The contributions in this issue explore the use of digitally connected media such as vacuum robots, smart speakers, drones, and kitchen appliances with reference to the domestication paradigm from interdisciplinary perspectives including media studies, sociology, anthropology, and human-computer interaction.

Meiobenthology Olav Giere, 2013-03-14 This is a comprehensive treatise on meiobenthology, the science of small animals which live, often disregarded even by zoologists, in huge numbers in all aquatic sediments. Covering all the scientific literature on the subject, particular emphasis is placed on ecological and systematic aspects. After a survey of the biotope conditions and important methods, the animals are introduced in a systematic account. This is followed by a report on the meiobenthos in relevant biotopes. The book concludes with an analysis of the productive role and the position of meiofauna in the food web and perspectives for future research.

The first section describes in detail the structures, molecules and regulatory mechanisms involved in sperm movement. Also reported are the effects of external milieu and egg factors on the initiation and types of sperm motility. The second section covers how to measure sperm motility in human semen and in capacitating media. The book addresses the prognostic value of motility parameters in cases of infertility. It covers the clinical significance of various drugs and toxins on sperm motility and the clinical management of infertile males with sperm motility defects. This volume is indispensable to biochemists, cell biologists and andrologists interested in cell motility, and to urologists, obstetricians, gynecologists, and endocrinologists involved in the management of infertility. It is of value to those in reproduction, animal science, veterinary science, and vertebrate zoology. The book contains basic and clinically relevant information for graduate students, researchers and clinicians.
