### **Equipping the Nexus 7** Rob Nagle,Alex

Ponting,Nicholas Nizibian,2012-07-17 With over 600,000 apps available for Android devices, hunting down and evaluating every app that might be worthwhile can be a real challenge. Fortunately, this book saves you the trouble. We've compiled a list of the best made, best looking, and most useful Nexus 7 apps across twelve categories: - Productivity - Reading - Social - Graphics - Audio - Video - Local - Sports - Utilities - Health - Games - and a final category for apps we wanted to include, but which didn't fit into any of the other categories. In this book, our focus is on recommending nothing but the best; we think it will be a valuable addition to any Nexus 7 ebook library.

Intersectionality and Urban Education Carl A. Grant,Elisabeth Zwier,2014-08-01 In urban education, "urban" is a floating signifier that is imbued with meaning, positive or negative by its users. "Urban" can be used to refer to both the geographical context of a city and a sense of "less than," most often in relation to race and/or socioeconomic status (Watson, 2011). For Noblit and Pink (2007), "Urban, rather, is a generalization as much about geography as it is about the idea that urban centers have problems: problems of too many people, too much poverty, too much crime and violence, and ultimately, too little hope" (p. xv). Recently, urban education scholars such as Anyon (2005), Pink and Noblit (2007), Blanchett, Klinger and Harry (2009), and Lipman (2013) have elucidated the social

construction of oppression and privilege for urban students, teachers, schools, families, and communities using intersectionality theories. Building on their work, we see the need for an edited collection that would look across the different realms of urban education— theorizing identity markers in urban education, education in urban schools and communities, thinking intersectionally in teacher education & higher education, educational policies & urban spaces— seeking to better understand each topic using an intersectional lens. Such a collection might serve to conceptually frame or provide methodological tools, or act as a reference point for scholars and educators who are trying to address urban educational issues in light of identities and power. Secondly, we argue that education questions and/or problems beg to be conceptualized and analyzed through more than one identity axis. Policies and practices that do not take into account urban students’ intertwining identity markers risk reproducing patterns of privilege and oppression, perpetuating stereotypes, and failing at the task we care most deeply about: supporting all students’ learning across a holistic range of academic, personal, and justice-oriented outcomes. Can educational policies and practices address the social justice issues faced in urban schools and communities today? We argue that doing intersectional research and implementing educational policies and practices guided by these frameworks can help improve the “fit.” Particular attention needs to be paid to intersectionality as a lens for

educational theory, policy, and practice. As urban educators we would be wise to consider the intertwining of these identity axes in order to better analyze educational issues and engage in teaching, learning, research, and policymaking that are better-tuned to the needs of diverse students, families, and communities.

**Health Informatics Meets EHealth** D. Hayn, G. Schreier, 2017-05-12 Ineffective discharge management can jeopardize the successful completion of hospital treatment; but a well managed transition from hospital care to care at home depends on the efficient exchange of information with out-patient healthcare providers and professionals. This is just one way in which ICT can support healthcare and provide tools which help health professions to identify and communicate relevant data. Such tools will be increasingly important in future healthcare systems, and indeed a Europe-wide ICT infrastructure for information and data exchange may do much to revolutionize the quality of healthcare. It is therefore essential that infrastructures build on well-established standards such as Integrating the Healthcare Enterprise (IHE), even if this initially takes longer to implement. This book presents the proceedings of the annual Health Informatics meets eHealth conference, held in Vienna, Austria, in May 2017. The special topic chosen for eHealth2017 is Digital Insight – Information-Driven Health & Care, and the conference addressed the increasingly international focus of eHealth and the importance of cross-border health ICT. The

papers presented here cover many eHealth topics, from maternity records to rehabilitation and from staff training to information exchange. Future ICT systems will inevitably involve machine learning and predictive analytics in order to provide actionable information to health professionals and support preventive healthcare concepts, and this book provides an insight into current research in health informatics and eHealth, addressing many issues central to the future of health and care. The book will be of interest to all healthcare researchers and practitioners.
