Fundamentals of Information Technology Bharihoke, 2009 The third edition of Fundamentals of Information Technology is a 'must have' book not only for BCA and MBA students, but also for all those who want to strengthen their knowledge of computers. The additional chapter on MS Office is a comprehensive study on MS Word, MS Excel and other components of the package. This book is packed with expert advice from eminent IT professionals, in-depth analyses and practical examples. It presents a detailed functioning of hardware components besides covering the software concepts. A broad overview of Computer architecture, Data representation in the computer, Operating systems, Database management systems, Programming languages, etc., has also been included. An additional chapter on Mobile Computing and other state-of-the-art innovations in the IT world have been incorporated. Not only that, the latest Internet technologies have also been covered in detail. One should use this book to acquire computer literacy in terms of how data is represented in a computer, how hardware devices are integrated to get the desired results, how the computer can be networked for interchanging data and establishing communication. Each chapter is followed by a number of review questions.

Shared mobility and MaaS Yves Crozet, Georgina Santos, Jean Coldefy, 2019-09-19

This CERRE report finds that to effectively reduce congestion and pollution in cities, policies should focus primarily on the rarest resource: space. Mobility as a Service (MaaS) also has a role to play in the transition towards truly sustainable mobility. But this is provided regulation guarantees that new mobility models complement and not substitute for public transport. European cities have been trying to enhance their mobility and transport systems, while reducing congestion, pollution, CO2 emissions, noise and accidents. Local transport policies across countries strive to encourage car drivers to switch to public transport, but with limited success. The authors of the report find that the lack of success of policies to encourage the switch to public transport is often due to the alleged trouble of using other transportation modes compared to the convenience of

private cars. “If cities are to effectively reduce congestion and pollution, regulation of access to cities must change dramatically. Until now, the constraints on the use of cars have largely remained low”, explain the authors. “An approach promising individual time savings will not benefit the collective interest. To be efficient, policies should focus primarily on the rarest resource for the community: space. Transport authorities must intervene on the uses of roads, sidewalks and pedestrian zones. It is up to them to define the balance between the different uses of roads”. In addition, public authorities should significantly develop public transport systems that constitute a genuine, practical, fast, reliable, and affordable alternative. The lack of public transport in areas of disperse and low demand due to financial reasons also remains a critical issue to be addressed. The CERRE report also finds that new mobility services (such as shared cars or free-floating e-scooters) provide unprecedented opportunities to reduce the disutility users would face from simply switching from the private car to public or active transport. Mobility as a Service (MaaS) enables users to change their routines, discover the variety of mobility services available and to combine former and new mobility services. Shared mobility providers may complement public transport, especially by supplying first and last mile solutions, and by serving areas where public transport is not financially viable. However, unless ridesharing replaces solo trips by car at a large scale, the impacts on congestion, pollution and CO2 emissions are likely to be neutral at best. Urban mobility public authorities cannot neglect the opportunities brought by new mobility services. Public authorities have to be more ambitious. They have to enlarge their spectrum of mobility services that will, in a financially sustainable way, ease user life and foster alternatives to

solo car use. But to effectively deal with new mobility services authorities must develop new skills in the data and platforms areas. Platforms, information services and ticketing are crucial to increase the number of users of urban mobility services. Although digitalisation cannot be considered a magic wand, it plays a critical role in achieving this transition to new mobility services. For MaaS to develop, Mobility data must be gathered under the umbrella of Metropolitan Transport Authorities, who are the only trusted party able to do so. "Policies for the use of roads should discourage the use of individual cars and incentivise ride sharing. As long as individual cars can move freely and on the same roads and use services in the same conditions as shared vehicles, it is unlikely that MaaS and shared mobility will be successful. In addition, public authorities need to modernise and grasps the opportunities that digitisation and data offer for the transition to a truly sustainable mobility", conclude the authors.

Agent-Based Modeling of Environmental Conflict and Cooperation Todd K.

BenDor,Jürgen Scheffran,2018-10-12 Conflict is a major facet of many environmental challenges of our time. However, growing conflict complexity makes it more difficult to identify win-win strategies for sustainable conflict resolution. Innovative methods are needed to help predict, understand, and resolve conflicts in cooperative ways. Agent-Based Modeling of Environmental Conflict and Cooperation examines computer modeling techniques as an important set of tools for assessing environmental and resource-based conflicts and, ultimately, for finding pathways to conflict resolution and cooperation. This book has two major goals. First, it argues that complexity science can be a unifying framework for professions engaged in conflict studies and resolution, including anthropology, law, management, peace studies, urban planning, and geography. Second, this book presents an innovative framework for approaching conflicts as complex adaptive systems by using many forms of environmental analysis, including system dynamics modeling, agent-based modeling, evolutionary game theory, viability theory, and network analysis. Known as VIABLE (Values and Investments from Agent-Based interaction and Learning in Environmental systems), this framework allows users to model advanced facets of conflicts—including institution building, coalition formation, adaptive learning, and the potential for future conflict—and conflict resolution based on the long-term

viability of the actors' strategies. Written for scholars, students, practitioners, and policy makers alike, this book offers readers an extensive introduction to environmental conflict research and resolution techniques. As the result of decades of research, the text presents a strong argument for conflict modeling and reviews the most popular and advanced techniques, including system dynamics modeling, agent-based modeling, and participatory modeling methods. This indispensable guide uses NetLogo, a widely used and free modeling software package, to implement the VIABLE modeling approach in three case study applications around the world. Readers are invited to explore, adapt, modify, and expand these models to conflicts they hope to better understand and resolve.

Mutative Media James A. Dator, John A. Sweeney, Aubrey M. Yee, 2014-09-09 Mutative Media is a sweeping examination of how communication technologies have contributed to changes in people's thoughts and actions, and thus in the power structures of societies, in the past, at present, and in four alternative futures. We start by surveying what is generally known about the emergence of human language and speech that has enabled humans to extend their organizing abilities beyond that of other hominids. We then review research on the emergence of signs, symbols, and eventually writing, which led to new ways of thinking, acting, and organizing in scribal societies and vastly extended human influence globally. We consider the impact of the printing press in Europe, the Middle East, China, and Korea that led to various ways of thinking and organizing in modern societies, and conclude our historical survey with a discussion of the emergence and impact of electric and electronic communication technologies from the nineteenth century to the present. After a brief overview of what "futures studies" is and is not, based on our

extensive experience in the field, we present four generic alternative futures, and discuss a prototype of a hybrid, mixed-reality game designed to enable players to experience the power and potential of new communication technologies within four very different environments and conditions. We think you will be intrigued by our surprising findings and what they may mean for future generations!

Electrical Control and Quantum Chaos with a High-Spin Nucleus in Silicon Serwan Asaad, 2021-10-19 Nuclear spins are highly coherent quantum objects that were featured in early ideas and demonstrations of quantum information processing. In silicon, the high-fidelity coherent control of a single phosphorus (^{31}P) nuclear spin $I=1/2$ has demonstrated record-breaking coherence times, entanglement, and weak measurements. In this thesis, we demonstrate the coherent quantum control of a single antimony (^{123}Sb) donor atom, whose higher nuclear spin $I = 7/2$ corresponds to eight nuclear spin states. However, rather than conventional nuclear magnetic resonance (NMR), we employ nuclear electric resonance (NER) to drive nuclear spin transitions using localized electric fields produced within a silicon nanoelectronic device. This method exploits an idea first proposed in 1961 but never realized experimentally with a single nucleus, nor in a non-polar crystal such as silicon. We then present a realistic proposal to construct a chaotic driven top from the nuclear spin of ^{123}Sb . Signatures of chaos are expected to arise for experimentally realizable parameters of the system, allowing the study of the relation between quantum decoherence and classical chaos, and the observation of dynamical tunneling. These results show that high-spin quadrupolar nuclei could be deployed as chaotic models, strain sensors, hybrid spin-mechanical quantum systems, and quantum-

computing elements using all-electrical controls.

Trends and Issues in Global Tourism 2012 Roland Conrady, Martin

Buck, 2012-01-28 This book offers insights into important trends and future scenarios in the global tourism and travel industry. Besides the general topics (aviation and hospitality industry, destination management, marketing, and distribution management) it analyses current challenges and impacts resulting especially from developments in social media, corporate social responsibility and eco-mobility. Sustainability in the global tourism sector and particularly eco-mobility is one of the top themes to-be and therefore a focus of this book. Among the contributors to the book are well-known notabilities from institutions such as the UNWTO and top executives of various segments of the tourism and travel industry. The articles are based on presentations and panel discussions presented at the world's largest tourism convention, the ITB Berlin Convention.
