OOIS 2000 Dilip Patel, Islam Choudhury, Shushma Patel, Sergio de Cesare, 2012-12-06 New object-oriented technologies have been conceived and implemented over the past decade in order to manage complexity inherent in information systems development. Research has spanned from information systems modelling languages (UML and OML) to databases (ODMG), from programming languages (Java) to middleware technology (CORBA). A more widespread use of the Internet has led to the emergence and integration of various other technologies, such as XML and database connectivity tools, allowing businesses to access and exchange information over the Internet. The main theme of OOIS 2000 was Object-Technology and New Business Opportunities and focused on research conducted in the area of effective information systems development for the promotion of e-commerce. Papers were invited from academics and practitioners. The thirty-nine papers accepted for OOMS 2000 are included in these proceedings. It is nice to see this year that the shift from centralised to distributed systems and the widespread access and use of the Internet has allowed the advent of new opportunities for businesses to exploit, in the form of e-commerce.

Mathematical, Computational Intelligence and Engineering Approaches for Tourism, Agriculture and Healthcare Pankaj Srivastava, S. S. Thakur, Georgia Irina Oros, Ali A. AlJarrah, Vichian Laohakosol, 2021-10-19 This book is a collection of selected papers presented at the 17th FAI International Conference on Engineering, Mathematical and Computational Intelligence (ICEMCI 2019), held at Jabalpur Engineering College, India, from 21–23 December 2019. This book discusses mathematical, computational intelligence and engineering approaches for tourism, agriculture and health care. It is a unique combination of a wide spectrum of topics, such as tourism destination ranking, medical diagnosis-based intelligent systems, drivers for hotel objectives, irrigation systems and more, which are discussed by using fuzzy, statistical and neural network tools. This book will be valuable to faculty members, postgraduate students, research scholars as well as readers from the industrial sector.

Corporia Mark Plemmons, 2014-03-10 *Corporia* is a 208-page tabletop role-playing game of genre-bending fiction and futuristic urban fantasy. In *Corporia*, you take on the roles of reborn Knights of the Round Table or their supernaturally-powered allies, fighting an invisible war for justice in the struggle between otherworldly Chaos magics and the oppressive Order of the ruling mega-corporations! *Corporia* is 'knights in shining Armani.' It's what happens when you mix Camelot with a spoonful of

Torchwood, add a pinch of cyberpunk, a dash of Joss Whedon's Angel, and a sprinkling of Shadowrun. If you enjoy these, you're going to love Corporia. Highlights One simple, unified game mechanic for all abilities, including fighting, spellcasting, and hacking! All characters can join the Hacker in virtual conflicts; no one gets left out! Spellcasters can cast whatever they can imagine, limited only by their skill rank in any of eight schools of magic - and all 64 sample spells can be easily modified at will! Four personality traits (three public, one private) keep situations interesting and provide points for permanent and temporary improvements, supplementing the core dice mechanics without becoming the main aspects of the rules! Metal melee weapons are more effective against monsters than firearms, keeping swords and daggers relevant even in a future of X-Calibre energy pistols and glowing raypiers! An innovative, modern design style in a book full of page-turning concepts!

Energy Security Challenges Centre for Public Policy Research, 2015-06-17 The International conference on Energy Security Challenges–Non Traditional Security planning in India was yet another attempt by the Centre for Public Policy Research (CPPR), to focus on one of the most challenging themes of current times. Given its global outlook and ramifications, energy security demands an integrated approach and strategic positioning, especially for a country such as India. Several factors have contributed to the unprecedented predominance that the energy security debate has achieved in international dialogue and diplomacy: the growth of new economic power centres; the fluctuating price of fossil fuels over the last three years; global warming due to climate change; the threat of terrorism, instability in some exporting nations; power blackouts and chronic shortages of power in several countries. Power blackouts have occurred on the east and west coasts of the United States, in Europe and in Russia while chronic shortages of electric power are being faced by China, India and other developing countries. Given the fundamental need for energy to fuel a country's economic growth, these power crises have caused concern not only about the reliability of electricity supply systems, but also raised fears of a scramble for energy supplies and heightened geopolitical rivalries. Thus the situation at the global level does not seem very positive. However, there have been attempts by several countries to streamline and reassert state control by installing new transportation channels and pipelines, hoping to offset the stark scarcity of their domestic resources through diversification, trade and investment in the energy sector. "Energy independence" is a phrase that has become a mantra since it was first articulated by Richard Nixon four weeks after the 1973 oil embargo was put in place. This national aspiration had long been at odds with reality for the United States. The real mood and

the state of the nation was captured by President Obama in 2009 when he stated, “At a time of such great challenge for America, no single issue is as fundamental to our future as energy” In recent years, new energy suppliers, technological developments like hydraulic fracturing and the US shale gas boom have redrawn the global energy scenario and caused significant geopolitical shifts. That energy issues are fundamental to India’s future is an undeniable fact. The country’s energy imports come at the cost of 7% of its GDP and is more often ruptured by the country’s balance of payment, which takes an ugly turn with the fluctuations in the energy market. India, the world’s fourth largest energy consumer, imports 80% of its crude oil and 25% of its natural gas requirements. Around 600 million Indians do not have access to electricity and about 700 million Indians use biomass as their primary energy source for cooking, according to Indian Government sources. India’s energy demand is expected to become more than double, from below 700 million tonnes of oil equivalent (mtoe) in 2013 to around 1,500 million tonnes of oil equivalent by 2035, according to estimates made by the oil ministry. Hence, the issue of energy security is undoubtedly a major concern for India as well as the United States.

Only Bachelors Need Apply Charlotte Maclay, 2011-07-15 HUSBAND IN A MILLION Single mom Joanna Greer knew all the mommy tricks: kiss boo-boos, fix three squares a day...fuss, fuss, fuss. But when it came to acting as a father figure to her young son, she was desperately at a loss.... Then little Tyler staked his claim on the handsome bachelor next door. Kris Slavik didn't know the first thing about fatherhood. His upbringing had been short on hugs, but long on expectations. Well, he'd earned his millions...several times over. Problem was, he had no one to share it with. Until a rambunctious kid and his beautiful mom had him tossing around footballs—and sizing very big diamond rings....

The Joy of Being Eaten Lawrence Vandervert, 2014-11-19 The Joy of Being Eaten, subtitled: Journeys into the Bizarre Sexuality and Private Love Lives of the Ancient Layers of the Human Brain is a science fiction novel based on psychology, and includes (1) the newest factual brain-imaging research that reads the mind (Professor Jack Gallant — see demonstration video at <http://gallantlab.org>), (2) triune brain evolution of layers of the brain (Paul MacLean, late Senior Research Scientist at National Institute of Mental Health), (3) the paleoanthropology of the Homo erectus people, (4) the neuroscience of the holograms of the mind (Professor Karl Pribram), and (5)

the artificial intelligence of tomorrow. The Joy is the story of two young women who journey into the ancient layers of the brain to experience 200 million years of deep autobiographical memory that includes our reptilian past and the Homo erectus people (http://en.wikipedia.org/wiki/Autobiographical_memory). This strongly science-based novel is an excellent supplemental reader for college-level courses in psychology, anthropology, computer science, and physics, or a helpful reader for anyone undergoing any of the psychological therapies.

Soon Lewis Blackwell, Chris Ashworth, 2001 *Soon* reveals the inner workings of leading advertisers and creative thinkers from around the globe when asked to create advertising for brands that will answer the needs of society in the future. Each project is meant to provoke, stimulate and inform with narratives, images and objects developed around issues like a synthetic drug that provides the benefits of eight hours of sleep in sixty minutes. Or solid state wired clothing that plays music, links to the web, and projects messaging onto sunglasses. It's a fascinating study, an exciting challenge and compelling read--just what the brave new world needs. Lewis Blackwell is International Creative Director at Getty Images. Formerly publisher and editor of *Creative Review*, he is the author of numerous critically acclaimed books. Chris Ashworth has held senior creative positions at MTV Europe and *Ray Gun* magazine, as well as formed the studios, Substance and Still. He is currently Design Director of gettyone design studio, a division of Getty Images in London, England.
