The Natural Motion of the Sun Practically Explained; which Discovers the Longitude in All Parts of the World James HURLY (Master of the Grammar School at Taunton.),1768

**The natural motion of the sun practically explained: which discovers the longitude in all parts of the world** James Hurly,1768

How to Prove There Is a God Mortimer Adler,2011-12-10 One of the great tasks of Mortimer Adler's illustrious life was his search for a watertight proof of the existence of God. Adler believed that his search had been successful. Adler spent years studying the classic proofs of God's existence, especially Aquinas's Five Ways, and found shortcomings in all of them, as conventionally understood. But he thought that some of them contained ideas which, if properly developed, could be improved, and he continued to search for a satisfying and logically unassailable proof. Toward the end of the 1970s, he believed he had arrived at such a proof, which he presented in his historic work, *How to Think about God* (1980). In the writings assembled in *How to Prove There Is a God*, Adler gives us his approach to the question of God's existence in fresh and popular form. He defends his position against critics, both believers and skeptics. The book includes a transcript of one of Adler's appearances on William Buckley's *Firing Line*, Adler's revealing interview with Edward Wakin, the exchange of views on natural theology between Adler and Owen Gingerich, and John Cramer's eloquent argument that the trend of modern cosmology supports Adler's early struggles with the question of God's existence.

Inertia and Gravitation Vesselin Petkov,2012-12-18 This book fills a gap in the literature. So far there has been no book which deals with inertia and gravitation by explicitly addressing open questions and issues which have been hampering the proper understanding of these phenomena. The book places a strong emphasis on the physical understanding of the main aspects and features of inertia and gravitation. It discusses questions such as: Are inertial forces fictitious or real? Does Minkowski's four-dimensional formulation of special relativity provide an insight into the origin of inertia? Does mass increase relativistically? Why is the inertial mass equivalent to the gravitational mass? Are gravitational phenomena caused by gravitational interaction according to general relativity? Is there gravitational energy? Do gravitational waves carry gravitational energy? Can gravity be quantized?

*On Aristotle's Physics 5-8* John Philoponus,1994 Paul Lettnick (Semitic languages, Free U., Amsterdam) has reconstructed Philoponus' commentary

on Aristotle by translating it from annotations to an Arabic translation of the Physics itself; only fragments of the commentary are extant. J.O. Urmson (philosophy, Stanford U.) translates the commentary by Simplicius on Aristotle's view of the void. The two were rival neoplatonists writing in Greek in the sixth century. *On Aristotle on the Heavens 2.10-14* Simplicius (of Cilicia.), 2005 Aristotle believed that the outermost stars are carried round us on a transparent sphere. There are directions in the universe and a preferred direction of rotation. The sun, moon and planets are carried on different revolving spheres. The spheres and celestial bodies are composed of an everlasting fifth element, which has none of the ordinary contrary properties like heat and cold which could destroy it, but only the facility for uniform rotation. But this creates problems as to how the heavenly bodies create light, and, in the case of the sun, heat. The topics covered in this part of Simplicius' commentary on *On the Heavens* are the speeds and distances of the stars; that the stars are spherical; why the sun and moon have fewer motions than the other five planets; why the sphere of the fixed stars contains so many stars whereas the other heavenly spheres contain no more than one (Simplicius has a long excursus on planetary theory in his commentary on this chapter); discussion of people's views on the position, motion or rest, shape, and size of the earth; and that the earth is a relatively small sphere at rest in the centre of the cosmos.--BOOK JACKET.
