Case and Grammatical Relations Greville G. Corbett,Michael P. Noonan,2008

The papers in this volume can be grouped into two broad, overlapping classes: those dealing primarily with case and those dealing primarily with grammatical relations. With regard to case, topics include descriptions of the case systems of two Caucasian languages, the problems of determining how many cases Russian has and whether Hungarian has a case system at all, the issue of case-combining, the retention of the dative in Swedish dialects, and genitive objects in the languages of Europe. With regard to grammatical relations, topics include the order of obliques in OV and VO languages, the effects of the referential hierarchy on the distribution of grammatical relations, the problem of whether the passive requires a subject category, the relation between subjecthood and definiteness, and the issue of how the loss of case and aspectual systems triggers the use of compensatory mechanisms in heritage Russian.

Official Gazette of the United States Patent and Trademark Office ,2003

From Case to Adposition John Hewson,Vit Bubenik,2006-12-13 In the historical development of many languages of the IE phylum the loss of inflectional morphology led to the development of a configurational syntax, where syntactic position marked syntactic role. The first of these configurations was the adposition (preposition or postposition), which developed out of the uninflected particle/preverbs in the older forms of IE, by forming fixed phrases with nominal elements, a pattern later followed in the development of a configurational NP (article + nominal) and VP (auxiliary + verbal). The authors follow this evolution through almost four thousand years of documentation in all twelve language families of the Indo-European phylum, noting the resemblances between the structure of the original IE case system and the systemic oppositions to be found in the sets of adpositions that replaced it. Quite apart from its theoretical analyses and proposals which in themselves amount to a new look at many traditional problems, this study has a value in the collected store of information on cases, and on adpositions and their usage. There is also a considerable store of etymological information that is relevant to the description of the systemic development.

Materials Interaction with Femtosecond Lasers Bernd Bauerhenne,2021-10-25

This book presents a unified view of the response of materials as a result of femtosecond laser excitation, introducing a general theory that captures both ultrashort-time non-thermal and long-time thermal phenomena. It includes a novel method for performing ultra-large-scale molecular dynamics simulations extending into experimental and technological spatial dimensions with ab-initio precision. For this, it introduces a new class of interatomic potentials, constructed from ab-initio data with the help of a self-learning algorithm, and verified by direct comparison with experiments in two different materials – the semiconductor silicon and the semimetal antimony. In addition to a detailed description of the new concepts introduced, as well as giving a timely review of ultrafast phenomena, the book provides a rigorous introduction to the field of laser-matter interaction and ab-initio description of solids, delivering a complete and self-contained examination of the topic from the very first principles. It explains, step by step from

the basic physical principles, the underlying concepts in quantum mechanics, solid-state physics, thermodynamics, statistical mechanics, and electrodynamics, introducing all necessary mathematical theorems as well as their proofs. A collection of appendices provide the reader with an appropriate review of many fundamental mathematical concepts, as well as important analytical and numerical parameters used in the simulations.

Peripheries David Adger,Cécile de Cat,George Tsoulas,2004-09-13 The syntactic periphery has become one of the most important areas of research in syntactic theory in recent years, due to the emergence of new research programmes initiated by Rizzi, Kayne and Chomsky. However research has concentrated on the empirical nature of clausal peripheries. The purpose of this volume is to explore the question of whether the notion of periphery has any real theoretical bite. An important consensus emerging from the volume is that the edges of certain syntactic expressions appear to be the locus of the connection between phrase structure, prosody, and information structure. This volume contains 16 papers by researchers in this area. The book: - contains an extensive introduction setting out the research questions addressed and setting the contributions in an overall theoretical context, - has a distinct comparative slant, - brings together work from a range of theoretical perspectives, while maintaining a unity of purpose, - could serve as the basis for a graduate course on peripheral positions, - contains papers addressing: = the question of the fine-grainedness of syntactic representations, = the relevance of syntactic edges to locality and semantic interpretation, = the nature of the dependencies connecting peripheral elements to the syntactic core. Audience: Academics and graduate students interested in syntax and its interfaces with semantics and prosody, acquisition of syntax, cross-linguistic comparison.

Topic, Focus, and Configurationality Werner Abraham, Sjaak de Meij, 1986-01-01 Some fundamental questions regarding sentence structure in linguistics concern whether all languages, at some level of abstraction, have the same structure, and what are the basic categories with which to describe sentence structure. The contributors of this volume are specialized in two quite different languages: Hungarian and German. Of the German papers three are mainly about focus (Abraham, Jacobs, and Stechow-Uhman), whereas the remaining ones (Haider and Scherpenisse) are mainly about V-second. The Hungarian papers are all about focus, of which those of Kálman, Kiefer, Marác, and De Mey-Marác are about focussing in the stricter sense. Hunyadi, Kenesei and É. Kiss focus on the pre-verbal area in general and the interpretation of operators in Hungarian in particular. The remaining papers (Horvath, Komlósy, and Szabolczi) are on the position of the PRE-V, the position immediately after the finite verb.

Applied Cryptography and Network Security Mauro Conti, Jianying Zhou, Emiliano Casalicchio, Angelo Spognardi, 2020-08-28 This two-volume set of LNCS 12146 and 12147 constitutes the refereed proceedings of the 18th International Conference on Applied Cryptography and Network Security, ACNS 2020, held in Rome, Italy, in October 2020. The conference was held virtually due to the COVID-19 pandemic. The 46 revised full papers presented were carefully reviewed and selected from 214 submissions. The papers were organized in topical sections named: cryptographic protocols cryptographic primitives, attacks on cryptographic primitives, encryption and signature, blockchain and cryptocurrency, secure multi-party computation, post-quantum cryptography.
