James Giordano

Neurotechnology James Giordano, 2012-04-26 New technologies that allow us to investigate mechanisms and functions of the brain have shown considerable promise in treating brain disease and injury. These emerging technologies also provide a means to assess and manipulate human consciousness, cognitions, emotions, and behaviors, bringing with them the potential to transform society. *Neurotechnology: Premises, Potential, and Problems* explores the technical, moral, legal, and sociopolitical issues that arise in and from today's applications of neuroscience and technology and discusses their implications for the future. Some of the issues raised in this thought-provoking volume include: Neurotechnology in education: an enablement, a treatment, or an enhancement? The potential and limitations of neuroimaging technology in determining patient prognoses Tissue implantation technology as a way of engendering personalized medicine Neuroprostheses: restoration of functions of the disabled vs. enhancement to transhuman capabilities Deep brain stimulation and its use in restoring, preserving, or changing patients' personal identity The benefit and risk of cognitive performance tools Cyborg technology and its potential to change our vision of humanity Methodologies for reducing the risk of neurotechnology's impact on ethical, legal, and social issues With contributions from an international group of experts working on the cutting edge of neurotechnology, this volume lays the groundwork to appreciate the ethical, legal, and social aspects of the science in ways that keep pace with this rapidly progressing field.

Neurotechnology in National Security and Defense James Giordano, 2014-09-25 *Neurotechnology in National Security and Defense: Practical Considerations, Neuroethical Concerns* is the second volume in the *Advances in Neurotechnology* series. It specifically addresses the neuroethical, legal, and social issues arising from the use of neurotechnology in national security and defense agendas and applications. Of particular concern

Neurotechnology Victor Hugo C. de Albuquerque, Alkinoos Athanasiou, Sidarta Ribeiro, 2020-04-26 This book focuses on recent advances and future trends in the methods and applications of technologies that are used in neuroscience for the evaluation, diagnosis and treatment of neurological diseases and conditions or for the improvement of quality of life. The editors have assembled contributions from a range of international experts, to bring together key topics in neurotechnology, neuroengineering, and neurorehabilitation. The book explores biomedical signal processing, neuroimaging acquisition and analysis, computational intelligence, virtual and augmented reality, biometrics, machine learning and neurorobotics, human machine interaction, mobile apps and discusses ways in which these neural technologies can be used as diagnostic tools, research methods, treatment modalities, as well as in devices and apps in everyday life. This cross-disciplinary topic is of particular interest to researchers and professionals with a background in neuroscience-related disciplines and neurotechnology, but also touches on a wide range of other fields including biomedical engineering, AI, medicine, healthcare, security and industry, among others.

Neurotechnology for Biomimetic Robots Joseph Ayers, Joel L. Davis, Alan Rudolph, 2002 An overview of neurotechnology, the engineering of robots based on animals and animal behavior. The goal of neurotechnology is to confer the performance advantages of animal systems on robotic machines. Biomimetic robots differ from traditional robots in that they are agile, relatively cheap, and able to deal with real-world environments. The engineering of these robots requires a thorough understanding of the biological systems on which they are based, at both the biomechanical and physiological levels. This book provides an in-depth overview of the field. The areas covered include myomorphic actuators, which mimic muscle action; neuromorphic sensors, which, like animal sensors, represent sensory modalities such as light, pressure, and motion in a labeled-line code; biomimetic controllers, based on the relatively simple control systems of invertebrate animals; and the autonomous behaviors that are based on an animal's selection of behaviors from a species-specific behavioral library. The ultimate goal is to develop a truly autonomous robot, one able to navigate and interact with its environment solely on the basis of sensory feedback without prompting from a human operator.

Clinical Neurotechnology meets Artificial Intelligence Orsolya Friedrich, Andreas Wolkenstein, Christoph Bublitz, Ralf J. Jox, Eric Racine, 2021-03-03 Neurotechnologies such as brain-computer interfaces (BCIs), which allow technical devices to be used with the power of thought or concentration alone, are no longer a futuristic dream or, depending on the viewpoint, a nightmare. Moreover, the combination of neurotechnologies and AI raises a host of pressing problems. Now that these technologies are about to leave the laboratory and enter the real world, these problems and implications can and should be scrutinized. This volume brings together scholars from a wide range of academic disciplines such as philosophy, law, the social sciences and neurosciences, and is unique in terms of both its focus and its methods. The latter vary considerably, and range from philosophical analysis and phenomenologically inspired descriptions to legal analysis and socio-empirical research. This diversified approach allows the book to explore the entire spectrum of philosophical, normative, legal and empirical dimensions of intelligent neurotechnologies. Philosophical and legal analyses of normative problems are complemented by a thorough empirical assessment of how BCIs and other forms of neurotechnology are being implemented, and what their measurable implications are. To take a closer look at specific neurotechnologies, a number of applications are addressed. Case studies, previously unidentified issues, and normative insights on these cases complement the rich portrait this volume provides. Clinicians, philosophers, lawyers, social scientists and engineers will greatly benefit from the collection of articles compiled in this book, which will likely become a standard reference work on the philosophy of intelligent neurotechnologies.

The Battle for Your Brain Nita A. Farahany, 2023-03-14 A new dawn of brain tracking and hacking is coming. Will you be prepared for what comes next? Imagine a world where your brain can be interrogated to learn your political beliefs, your thoughts can be used as evidence of a crime, and your own feelings can be held against you. A world where people who suffer from epilepsy receive alerts moments before a seizure, and the average person can peer into their own mind to eliminate painful memories or cure addictions. Neuroscience has already made all of this possible today, and neurotechnology will soon become the “universal controller” for all of our interactions with technology. This can benefit humanity immensely, but without safeguards, it can seriously threaten our fundamental human rights to privacy, freedom of thought, and self-determination. From one of the world’s foremost experts on the ethics of neuroscience, *The Battle for Your Brain* offers a path forward to navigate the complex legal and ethical dilemmas that will fundamentally impact our freedom to understand, shape, and define ourselves.

Neurotechnology and Direct Brain Communication Michele Farisco, Kathinka Evers, 2016-04-28 Neurotechnology and Direct Brain Communication focuses on recent neuroscientific investigations of infant brains and of patients with disorders of consciousness (DOC), both of which are at the forefront of contemporary neuroscience. The prospective use of neurotechnology to access mental states in these subjects, including

neuroimaging, brain simulation, and brain computer interfaces, offers new opportunities for clinicians and researchers, but has also received specific attention from philosophical, scientific, ethical, and legal points of view. This book offers the first systematic assessment of these issues, investigating the tools neurotechnology offers to care for verbally non-communicative subjects and suggesting a multidisciplinary approach to the ethical and legal implications of ordinary and experimental practices. The book is divided into three parts: the first and second focus on the scientific and clinical implications of neurological tools for DOC patient and infant care. With reference to these developments, the third and final part presents the case for re-evaluating classical ethical and legal concepts, such as authority, informed consent, and privacy. Neurotechnology and Direct Brain Communication will appeal to researchers and postgraduate students in the fields of cognitive science, medical ethics, medical technology, and the philosophy of the mind. With implications for patient care, it will also be a useful resource for clinicians, medical centres, and health practitioners.

Neurotechnology, Electronics, and Informatics Ana Rita Londral, Pedro Encarnação, José Luis Pons Rovira, 2015-07-15 The International Congress on Neurotechnology, Electronics, and Informatics (NEUROTECHNIX) took place in Algarve, Portugal in September of 2013. The congress provided a meeting point of academics and clinical and engineering professionals, promoting translational discussions on how research and technology can meet the needs of clinical practitioners and patients. NEUROTECHNIX emphasized research and application of neurotechnologies to various neurological disorders, including neuromuscular diseases, Parkinson's disease, developmental disorders, dementia, epilepsy, sleep disorders, Multiple Sclerosis, neuroinfections, brain tumors, stroke, traumatic brain injuries, Cerebral Palsy, spinal cord injury and vision and hearing disorders. Authors were invited to submit innovative research work that highlighted new advancements of neurotechnology. Papers describing case studies, advanced prototypes, systems, tools and techniques and general survey papers indicating future directions were encouraged. This book contains a limited selection of extended and revised versions of the best papers presented at the congress, by regular and keynote speakers.

Neuralink Arpita Agnihotri, Saurabh Bhattacharya, 2023 Neuralink Corp (Neuralink) is a San Francisco-based neurotechnology company founded and led by Elon Musk. Musk invested in a brain-machine (computer) interface (BCI) ostensibly to combat potentially dangerous artificial intelligence applications. BCI is a computer-based system that receives brain signals and translates them into commands. These commands are then transmitted to the output device that carries the desired action. Musk first wanted to cure brain-related diseases, followed by enhancing the cognitive ability of humans. However, he faced several challenges. Implementing a BCI involved invasive surgery, and experts believed that the average person might not be willing to undergo surgery to enhance cognitive abilities such as faster typing on a keyboard. Also, non-invasive technologies were available, and competition was increasing. Some experts believed that BCI was closer to science fiction, with limited market demand. Some companies were also considering skipping the U.S. Food and Drug Administration approval of neurotechnology by marketing it as a wellness product. Should Musk pursue a non-invasive or an invasive BCI technology? Should companies market neurotechnology as a wellness product? Will Musk find success with

invasive BCI technology?

Advances in Neurotechnology, Electronics and Informatics Ana Rita Londral, Pedro Encarnação, 2015-12-10 This book is a timely report on current neurotechnology research. It presents a snapshot of the state of the art in the field, discusses current challenges and identifies new directions. The book includes a selection of extended and revised contributions presented at the 2nd International Congress on Neurotechnology, Electronics and Informatics (NEUROTECHNIX 2014), held October 25-26 in Rome, Italy. The chapters are varied: some report on novel theoretical methods for studying neuronal connectivity or neural system behaviour; others report on advanced technologies developed for similar purposes; while further contributions concern new engineering methods and technological tools supporting medical diagnosis and neurorehabilitation. All in all, this book provides graduate students, researchers and practitioners dealing with different aspects of neurotechnologies with a unified view of the field, thus fostering new ideas and research collaborations among groups from different disciplines.

Neurotechnologies of the Self Jonna Brenninkmeijer, 2016-05-31 Taking care of oneself is increasingly interpreted as taking care of one's brain. Apart from pills, books, food, and games for a better brain, people can also use neurotechnologies for self-improvement. This book explores how the use of brain devices to understand or improve the self changes people's subjectivity. This book describes how the effects of several brain devices were and are demonstrated; how brains and selves interact in the work of early brainwave scientists and contemporary practitioners; how users of neurofeedback (brainwave training) constitute a new mode of self that is extended with a brain and various other (physiological, psychological, material, and sometimes spiritual) entities, and; how clients, practitioners and other actors (computers, brain maps, brainwaves) perform a dance of agency during the neurofeedback process. Through these topics, Jonna Brenninkmeijer provides a historical, ethnographical, and theoretical exploration of the mode of being that is constituted when people use a brain device to improve themselves.

Neurotechnology and the End of Finitude Michael Haworth, 2018-05-29 A bold philosophical investigation into technology and the limits of the human A daring, original work of philosophical speculation, Neurotechnology and the End of Finitude mounts a sustained investigation into the possibility that human beings may technologically overcome the transcendental limits of possible experience and envisages what such a transition would look like. Focusing on emergent neurotechnologies, which establish a direct channel of communication between brain and machine, Michael Haworth argues that such technologies intervene at the border between interiority and exteriority, offering the promise of immediacy and the possibility of the mind directly affecting the outside world or even other minds. Through detailed, targeted readings of Kant, Freud, Heidegger, Croce, Jung, and Derrida, Haworth explores the effect of this transformation on human creativity and our relationships with others. He pursues these questions across four distinct but interrelated spheres: the act of artistic creation and the potential for a technologically enabled coincidence of idea and object; the possibility of humanity achieving the infinite creativity that Kant attributed only to God; the relationship between the psyche and the

external world in Freudian psychoanalysis and Jungian analytical psychology; and the viability and impact of techno-telepathic communication. Addressing readers interested in contemporary continental philosophy and philosophy of technology, media and communications, and science and technology studies, *Neurotechnology and the End of Finitude* critically envisions a plausible posthuman future.

Transpersonal Psychology: Altered States of Consciousness, Biofeedback and Neurotechnology Raul Valverde, 2022-03-04 Transpersonal psychology is the study of human nature and development that assumes that human beings possess potentials that exceed the limits of ego developed normally. The main goal of transpersonal psychology is to integrate the spiritual experience within a broader understanding of the human psyche and consciousness. *Transpersonal Psychology: Altered States of Consciousness, Biofeedback and Neurotechnology* introduces the use of biofeedback and neurotechnology for the transpersonal therapist to induce and measure altered states of consciousness to deal with persons having mental conditions. The therapist and the patient can benefit from self-exploration and self-realization of altered consciousness that could be responsible for the mental condition of the patient. Chapters in the book start with an introduction to the theory of consciousness and transpersonal psychology followed by an explanation of the relationship of quantum physics to consciousness model. The book then progresses towards in depth topics such as biofeedback which covers the measurement parameters for understanding consciousness and computer-based technologies that help induce altered states of consciousness. Finally, the book concludes by linking all the concepts together to guide the transpersonal psychologist to measure and support transpersonal psychotherapy through a cybertherapy system. *Transpersonal Psychology: Altered States of Consciousness, Biofeedback and Neurotechnology* is an ideal guide for the transpersonal psychologist and psychotherapist and the enthusiast who wants to understand the science behind altered states of consciousness from a theoretical and experimental framework.
