Innovations in Services Marketing and Management: Strategies for Emerging Economies Goyal, Anita, 2013-10-31 Modern corporations face a variety of challenges and opportunities in the field of sustainable development. Properly managing assets and maintaining effective relationships with customers are crucial considerations in successful businesses. *Innovations in Services Marketing and Management: Strategies for Emerging Economies* presents insights into marketing strategies and tactical perspectives in both large and small enterprises. The chapters in this book explore case studies, contemporary research, and theoretical frameworks in effective business management, providing students, academicians, researchers, and managers with the resources and insight necessary to identify key trends in emerging economies and build the next generation of innovative services.

Intelligent Systems in Production Engineering and Maintenance Anna Burduk, Edward Chlebus, Tomasz Nowakowski, Agnieszka Tubis, 2018-07-31 The book presents a collection of 103 peer-reviewed articles from the Second International Conference on Intelligent Systems in Production Engineering and Maintenance (ISPEM 2018). The conference was organized by the Faculty of Mechanical Engineering and CAMT (Centre for Advanced Manufacturing Technologies), Wrocław University of Science and Technology and was held in Wrocław (Poland) on 17–18 September 2018. The conference topics included the possibility of using a wide range of intelligent methods in production engineering, presenting and discussing new solutions for innovative plants, research findings and case studies demonstrating advances in production and maintenance from the point of view of Industry 4.0 – particularly applications of intelligent systems, methods and tools in production engineering, maintenance, logistics, quality management, information systems and product development. The book is divided into two parts: the first includes papers related to intelligent systems in production engineering, while the second is dedicated to special sessions focusing on: 1. Computer Aided methods in Production Engineering 2. Mining 4.0 and Intelligent Mining Transportation 3. Modelling and Simulation of Production Processes 4. Multi-Faceted Modelling of Networks and Processes 5. Product Design and Product Manufacturing in Industry 4.0 This book is an excellent source of information for scientists in the field of manufacturing engineering and for top managers in production enterprises.

Intelligent Computing Paradigm and Cutting-edge Technologies Lakhmi C. Jain, Sheng-Lung Peng, Basim Alhadidi, Souvik Pal, 2020-01-02 This book discusses fundamental and high-level concepts relating to intelligent computing and communications in the context of distributed computing, big data, high performance computing and the Internet of Things. It is becoming increasingly important to develop adaptive, intelligent, computing-centric, energy-aware, secure and privacy-aware mechanisms in high-performance computing and IoT applications. Serving as a useful guide for researchers and practitioners working in the field of information technology and computer science, the book also appeals to beginners wanting to learn more about the better computing paradigm. In addition, it provides a platform for researchers, engineers, academics and industry professionals from around the globe to share their research findings.

Human Interactive Proofs Henry S. Baird, Daniel P. Lopresti, 2005-05-12 This book constitutes the refereed proceedings of the Second International Workshop on Human Interactive Proofs, HIP 2005, held in Bethlehem, PA, USA in May 2005. The 9 revised full papers presented were carefully reviewed and selected for presentation. This book is the first archival publication devoted to the new class of security protocols called human interactive proofs. The variant of HIPs being used in e-commerce and Web services today is completely automatic public Turing tests to tell computers and humans apart, CAPTCHAs. The papers in this book are organized in topical sections on CAPTCHAs and performance analysis, HIP architectures, HIP as security systems components.

The Routledge Handbook to the Ghost Story Scott Brewster, Luke Thurston, 2017-11-14 The Handbook to the Ghost Story sets out to survey and significantly extend a new field of criticism which has been taking shape over recent years, centring on the ghost story and bringing together a vast range of interpretive methods and theoretical perspectives. The main task of the volume is to properly situate the genre within historical and contemporary literary cultures across the globe, and to explore its significance within wider literary contexts as well as those of the supernatural. The Handbook offers the most significant contribution to this new critical field to date, assembling some of its leading scholars to examine the key contexts and issues required for understanding the emergence and development of the ghost story.

Research Anthology on Collaboration, Digital Services, and Resource Management for the Sustainability of Libraries Information Resources Management Association, 2021 This edited anthology explores emerging strategies and technologies that are redefining the role of the library within communities and academia providing extensive ground on all the ways libraries have shifted to manage their resources, digitalize their services, and market themselves within the new technological revolution--

Advanced Image-Based Spam Detection and Filtering Techniques Dhavale, Sunita Vikrant, 2017-03-10 Security technologies have advanced at an accelerated pace in the past few decades. These advancements in cyber security have benefitted many organizations and companies interested in protecting their virtual assets. *Advanced Image-Based Spam Detection and Filtering Techniques* provides a detailed examination of the latest strategies and methods used to protect against virtual spam. Featuring comprehensive coverage across a range of related topics such as image filters, optical character recognition, fuzzy inference systems, and near-duplicate detection, this book is an ideal reference source for engineers, business managers, professionals, and researchers seeking innovative technologies to aid in spam recognition.

Wireless Communications, Networking and Applications Qing-An Zeng, 2015-10-28 This book is based on a series of conferences on Wireless Communications, Networking and Applications that have been held on December 27-28, 2014 in Shenzhen, China. The meetings themselves were a response to technological developments in the areas of wireless communications, networking and applications and facilitate researchers, engineers and students to share the latest research results and the advanced research methods of the field. The broad variety of disciplines involved in this research and the differences in approaching the basic problems are probably typical of a developing field of interdisciplinary research. However, some main areas of research and development in the emerging areas of wireless communication technology can now be identified. The contributions to this book are mainly selected from the papers of the conference on wireless communications, networking and applications and reflect the main areas of interest: Section 1 - Emerging Topics in Wireless and Mobile Computing and Communications; Section 2 - Internet of Things and Long Term Evolution Engineering; Section 3 - Resource Allocation and Interference Management; Section 4 - Communication Architecture, Algorithms, Modeling and Evaluation; Section 5 - Security, Privacy, and Trust; and Section 6 - Routing, Position Management and Network Topologies.

Translator's Workbench Marianne Kugler, Khurshid Ahmad, Gregor Thurmair, 2013-11-09 The Translator's Workbench Project was a European Community sponsored research and development project which dealt with issues in multi-lingual communication and documentation. This book presents an integrated toolset as a solution to problems in translation and documentation. Professional translators and teachers of translation were involved in the process of software development, starting with a detailed study of the user requirements and ending with several evaluation-and-improvement cycles of the resulting toolset. English, German, Greek, and Spanish are addressed in the contributions, however, some of the techniques are inherently language-independent and can thus be extended to cover other languages as well. Translation can be viewed broadly as the execution of three cognitive processes, and this book has been structured along these lines: • First, the translation pre-process, understanding the target language text at a lexico semantic level on the one hand, and making sense of the source language document on the other hand. The tools for the pre-translation process include access to electronic networks, conversion of documents from one format to another, creation of terminology data banks and access to existing data banks, and terminology dictionaries. • Second, the translation process, rendering sentences in the source language into equivalent target sentences. The translation process refers to the potential of conventional machine translation systems, like METAL, and of the statistically oriented translation memory.

Intelligent Computing Paradigm and Cutting-edge Technologies Margarita N. Favorskaya, Sheng-Lung Peng, Milan Simic, Basim Alhadidi, Souvik Pal, 2021-04-21 This book aims to bring together Researchers, Scientists, Engineers, Scholars and Students in the areas of computer engineering and information technology, and provides a forum for the dissemination of original research results, new ideas, Research and development, practical experiments, which concentrate on both theory and practices, for the benefit of the society. The book also provides a premier interdisciplinary platform for researchers, practitioners and educators to present and discuss the most recent innovations, trends, and concerns as well as practical challenges encountered and solutions adopted in the fields of Computer Science and Information Technology in the context of Distributed computing, Big data, High performance computing, Internet-of-Things, and digital pedagogy. It is becoming increasingly important to develop adaptive, intelligent computing-centric, energy-aware, secure and privacy-aware mechanisms in high performance computing and IoT applications. This book aspires to convey researchers' experiences, to present excellent result analysis, future scopes, and challenges facing the field of computer science, information technology, telecommunication, and digital pedagogy. This book aims to attract researchers and practitioners who are working in Information Technology and Computer Science. This book is about basics and high level concepts regarding intelligent computing paradigm, communications, and digital learning process. The book serves as a useful guide for Undergraduates, Postgraduates and Research Scholar in the field of Computer Science, Information Technology, and Electronics Engineering. We believe that this volume not only presents novel and interesting ideas but also will stimulate interesting discussions from the participants and inspire new ideas.

The Slav: Move by Move Cyrus Lakdawala, This is a brand new series which provides an ideal platform to study chess openings. By continually challenging the reader to answer probing questions throughout the book, Move by Move greatly encourages the learning and practising of vital skills just as much as the traditional assimilation of opening knowledge. Carefully selected questions and answers are designed to keep you actively involved, and allow you to monitor your progress as you learn. This is an excellent way to study any chess opening and at the same time improve your general opening skills and knowledge. In this book, Cyrus Lakdawala examines the universally popular Slav Defence which has been his main choice against 1 d4 for many years. Here he shares his experience and knowledge of his favourite opening, presents a repertoire for Black and provides answers to all the key questions.

Transpo Tricks in Chess Andrew Soltis, 2013-01-10 In chess, a transposition is a known position reached by a different move order than usual - a less obvious way of getting to somewhere you want to go, leading to confusion for your opponent. Every chess player has a number of them in his arsenal, and they are used most often in openings. There are transpositional tricks in all openings, but this is the first book devoted to them. As the book covers all the key openings variations it can be used by most chess players. The introduction explains what transpositions are and why they're invaluable, followed by 8 chapters discussing transpositions, illustrated by some notorious examples from top-flight matches. Chapters are divided by opening group - Double e-pawn openings; Sicilian Defense; Other Semi-Open openings; Double e-pawn openings; Indian openings; Other 1 d4 openings; Reti, English, 1 g3. The benefits and drawbacks of each set of move orders are discussed throughout. This is an ideal book for all club players and is written by one of the best chess writers in the world today.

The English Attack Tapani Sammalvuo, 2002-12 The Najdorf Sicilian is one of the key battlegrounds of modern chess. This opening line occurs in a high proportion of top-level games, and is popular amongst players of all levels. World Champions Fischer and Kasparov are the Najdorf's most famous adherents - both made it their main defence, and scored a high proportion of wins with it, while very rarely losing. The English Attack (Be3 and f3) became popular as a direct attacking method against the Najdorf in the 1980s, following its successful use by Nunn, Short and Chandler. Since then, it has become established as the most critical line of the Najdorf, with Anand and even Kasparov himself using it to devastating effect at the highest level. This book is the first to be devoted to this most topical of openings, and its comprehensive coverage will enable players of all standards to play either side of the English Attack with confidence. Sammalvuo also discusses the trendy 6 f3 move-order, and the English Attack set-up against a variety of other Sicilian lines.

Manual of Specialised Lexicography Henning Bergenholtz, Sven Tarp, 1995-01-01 From 1990 1994 the Danish Research Council for the Humanities granted a research project entitled translation of LSP texts, which was initially split up into five part-projects, one of which has been concerned with LSP lexicography. The Manual of Specialised Lexicography is one of the results of the research undertaken by this project. The primary purpose of the Manual is to contribute towards an improved basis for practical specialised lexicography, which has so far had but a small share in the explosive development that has taken place in general-language lexicography since the early 1970s. One implication of this is that only to a limited extent has it been possible to build upon existing findings. The Manual thus has the twofold aim of offering guidance and direction to authors of specialised dictionaries as well as contributing towards the further development of lexicographical theories.

Excelling at Chess Calculation Jacob Aagaard, 2004 Looks at the art of chess calculation, describing when a player should calculate, how to discover moves, and how much time to spend on critical moves.

A Strategic Chess Opening Repertoire for White John L. Watson, 2012 Such has been the acclaim for John Watson's ground-breaking works on modern chess strategy and his insightful opening books, that it is only natural that he now presents a strategic opening repertoire. It is the chess-player's holy grail: a flexible repertoire that gives opponents real problems but doesn't require masses of memorization or continual study of ever-changing grandmaster theory. While this book can't quite promise all of that, Watson offers an intriguing selection of lines that give vast scope for over-the-board creativity and should never lead to a dull draw. The repertoire is based on 1 d4 and 2 c4, following up with methodical play in the centre. Watson uses his vast opening knowledge to pick cunning move-orders and poisonous sequences that will force opponents to think for themselves, providing a true test of chess understanding. Throughout, he discusses strategies for both sides, so readers will be fully ready to pounce on any inaccuracies, and have all the tools to decide on the most appropriate plans for White.

Starting Out Neil McDonald, 2003 Ideal for those wanting to understand the basics of the English Opening. The English is a sophisticated and popular opening system that is suitable for all types of players and can lead to both positional and tactical middlegames. Many of the world's top players, including Kasparov and Kramnik, include the English in their openings weaponry. In this groundbreaking book, Grandmaster Neil McDonald revisits the basic principles behind the English and its many variations. Throughout this easy-to-read guide the reader is aided by a wealth of notes, tips and warnings from the author, while key strategies, ideas and tactics for both sides are clearly illustrated. This book is ideal for the improving player. * Written by an openings expert * All the important lines are covered * A back-to-basics look at one of the most important openings
