More Meanderings Derek Fountaine, Sam Sterling, 2012-04-01 'More Meanderings' is a collection of stories with no specific genre. 'Habit of a Lifetime'... why should Alfred break his routine just because he's dead? 'The Dream' ... are all dreams impossible, or...? 'Bernadette' ... is there a greater force in this world than Mother Love? 'Pegasus'... Winged horse or iron horse? 'Olympus Mons' ... does love have to have restrictions? 'Eternal Embers' ... How many generations, over how many eons, have stared into the embers and remembered...? 'Demetrie' ... just who, or what, is Demetrie? 'The Collection' ... he collected WHAT 'The Third Face in the Photo' ... Gone and forgotten? No! 'The Price' ... no one will know; but; there is always a price to pay! 'Max, ' ... cute little puppy, hero dog. 'Regarding Robert' ... Just where did he wake up? 'Unchained Melody' seek and ye shall find, especially when you don't want to!

Corpus Methodologies Explained Meng Ji,Michael Oakes,Li Defeng,Lidun Hareide,2016-08-25 This book introduces the latest advances in Corpus-Based Translation Studies (CBTS), a thriving subfield of Translation Studies which forms an important part of both translator training and empirical translation research. Largely empirical and exploratory, a distinctive feature of CBTS is the development and exploration of quantitative linguistic data in search of useful patterns of variation and change in translation. With the introduction of textual statistics to Translation Studies, CBTS has geared towards a new research direction that is more systematic in the identification of translation patterns; and more explanatory of any linguistic variations identified in translations. The book traces the advances from the advent of language corpora in translation studies, to the new textual dimensions and shift towards a probability-variation model. Such advances made in CBTS have enabled in-depth analyses of translation by establishing useful links between a translation and the social and cultural context in which the translation is produced, circulated and consumed.

Ensembles in Machine Learning Applications Oleg Okun,Giorgio Valentini,Matteo Re,2011-09-07 This book contains the extended papers presented at the 3rd Workshop on Supervised and Unsupervised

Ensemble Methods and their Applications (SUEMA) that was held in conjunction with the European Conference on Machine Learning and Principles and Practice of Knowledge Discovery in Databases (ECML/PKDD 2010, Barcelona, Catalonia, Spain). As its two predecessors, its main theme was ensembles of supervised and unsupervised algorithms – advanced machine learning and data mining technique. Unlike a single classification or clustering algorithm, an ensemble is a group of algorithms, each of which first independently solves the task at hand by assigning a class or cluster label (voting) to instances in a dataset and after that all votes are combined together to produce the final class or cluster membership. As a result, ensembles often outperform best single algorithms in many real-world problems. This book consists of 14 chapters, each of which can be read independently of the others. In addition to two previous SUEMA editions, also published by Springer, many chapters in the current book include pseudo code and/or programming code of the algorithms described in them. This was done in order to facilitate ensemble adoption in practice and to help to both researchers and engineers developing ensemble applications.
