Coastal Reservoir Technology and Applications Shu-Qing Yang,2022-02-18 Coastal Reservoir Technology and Applications presents the analyses showing that the world is not running out of water, but water is running out of river mouths—we need to work to harness this resource. Compared with inland water storages and desalination technology, coastal reservoirs are a nature-based water solution without disturbing the environment. This book mainly answers the questions of what the coastal reservoir technology is, where we should construct coastal reservoirs, and how to supply sufficient, high-quality and affordable water to the world with minimum environmental/social impacts. Chapter 1 reviews modes of water resources development in the history along with current problems and reasons. Chapter 2 discusses the definition of coastal reservoirs, its classifications and applications, and the SPP/downstream water management strategy. Other chapters analyse water crisis in every continent, as well as their water solutions. The possible coastal reservoir for each major river is suggested as well. Without freshwater, no one can survive. Likewise, without sufficient, high-quality and affordable freshwater, no community can achieve sustainable development. However, water is also a killer when it is too much (floods), too dirty (pollution), and too turbid. Different from other books, this resource shows how to solve these water problems. Coastal reservoirs and SPP strategy are suggested to develop floodwater in a safe way in coastal and inland regions, respectively. Solution of water-food-energy-ecosystem nexus needs a paradigm shift from upstream to downstream water management, i.e., from mountainous dams to coastal reservoirs, which conserves the precious, clean freshwater in seawater environment. Provides an analysis of every large river in the world to help users determine the feasibility of using a coastal reservoir in each location Presents a global coverage, including case studies where this technology has already been implemented Authored by a world expert on coastal reservoirs, with several patents in the area

History of Shipbuilding on North River, Plymouth County, Massachusetts L. Vernon Briggs,2017-09-15 Excerpt from History of Shipbuilding on North River, Plymouth County, Massachusetts:

With Genealogies of the Shipbuilders, and Accounts of the Industries Upon Its Tributaries, 1640 to 1872 The name of North River is familiar to the older generations of seafaring men and especially to the older residents of Nantucket, New Bedford, Sag Harbor, Barnstable, Provincetown, Boston and the South Shore. Great Britain was a market for a large num ber of North River built vessels before the Revolution. Prior to 1800 North River was known the world over; vessels were not designated as having been built in Scituate, Marshfield, Hanover or Pembroke, but on North River. The author has unearthed the records of over one thousand and twenty-five vessels built here, and the United States Flag was carried around the world, and among other places, to the following countries for the first time at the mast heads of North River built vessels Great Brit ain, Canada, the Northwest coast, to the Black Sea and China. The largest number of vessels built on the River in a single year that the author has found the records of was thirty in 1801, and the year 1818 shows the next largest number, twenty-four. During the five years, from 1799 to 1804 inclusive, there were built here one hundred and fifteen vessels, an average of twenty-three each year. During the ten years, from 1794 to 1804 inclusive, there were one hundred and seventy-eight vessels built here, or an average of 17 each year. The largest number of vessels found bearing the same name were Betseys and Sallys, fourteen each twelve Marys, eleven Pollys, and ten Neptunes. Times looka little brighter for the shipbuilders in general now; nine or more vessels are on the stocks at Bath, Me. Currier hasjust launched a 1200-t0n four-masted schooner at Newburyport; a similar ves sel has recently been launched at New Haven, Conn., and six or more vessels are building at East Boston. North River may yet see another vessel, and perhaps many more built upon her banks. Several of the old shipbuilders affirm that in build ing small vessels there are no obstacles but what could easily be overcome, if the men had the courage. The copied manuscript of this volume has been deposited with the New England His toric Genealogical Society, Boston. War and Technology: A Very Short Introduction Alex Roland,2016-09-01 The war instinct is part of human nature, but the means to fight war depend on technology. Alex Roland traces the co-evolution of technology and warfare from the Stone Age to the age of cyberwar, describing the inventions that changed the direction of warfare throughout history: from fortified walls, the chariot, battleships, and the gunpowder revolution to bombers, rockets, improvised explosive devices (IEDs), and nuclear weapons. In the twenty-first century, new technologies continue to push warfare in unexpected directions, while warfare stimulates stunning new technological advances. Yet even now, the newest and best technology cannot guarantee victory. Brimming with dramatic narratives of battles and deep insights into military psychology, this book shows that although military technologies keep changing at great speed, the principles and patterns behind them abide.

The 100 Most Influential Technology Leaders of All Time Bailey Maxim,2016-07-15 This book presents biographies of 100 innovators of technology who have affected nearly every facet of life, from transportation and communication to science and entertainment. Technology, Innovation, and Southern Industrialization Susanna Delfino,Michele Gillespie,2008 Because of its strong agrarian roots, the South has typically been viewed as a region not favorably disposed to innovation and technology. Yet innovation was never absent from industrialization in this part of the United States. From the early nineteenth century onward, southerners were as eager as other Americans to embrace technology as a path to modernity. This volume features seven essays that range widely across the region and its history, from the antebellum era to the present, to assess the role of innovations presumed lacking by most historians. Offering a challenging interpretation of industrialization in the South, these writings show that the benefits of innovations had to be carefully weighed against the costs to both industry and society. The essays consider a wide range of innovative technologies. Some examine specific industries in subregions: steamboats in the lower Mississippi valley, textile manufacturing in Georgia and Arkansas, coal mining in Virginia, and sugar planting and processing in Louisiana. Others consider the role of technology in South Carolina textile mills around the turn of the twentieth century, the electrification of the Tennessee valley, and telemedicine in contemporary Arizona--marking the expansion of the region into the southwestern Sunbelt. Together, these articles show that southerners set significant limitations on what technological innovations they were willing to adopt, particularly in a milieu where slaveholding agriculture had shaped the allocation of resources. They also reveal how scarcity of capital and continued reliance on agriculture influenced that allocation into the twentieth century, relieved eventually by federal spending during the Depression and its aftermath that sparked the Sunbelt South's economic boom. Technology, Innovation, and Southern Industrialization clearly demonstrates that the South's embrace of technological innovation in the modern era doesn't mark a radical change from the past but rather signals that such pursuits were always part of the region's economy. It deflates the myth of southern agrarianism while expanding the scope of antebellum American industrialization beyond the Northeast and offers new insights into the relationship of southern economic history to the region's society and politics.
