Disaster Victim Identification in the 21st Century John A. Williams,Victor W. Weedn,2022-04-14 A comprehensive examination of all critical aspects of Disaster Victim Identification (DVI) As the frequency of both natural and man-made mass fatality disasters increases worldwide, the establishment of clear standards and best practices within the field of Disaster Victim identification (DVI) is of vital importance. Whereas most countries assign jurisdiction to law enforcement agencies following Interpol guidelines, DVI is the responsibility of the medical examiner and coroner in the United States. Disaster Victim Identification in the 21st Century is the first book of its kind to directly address the needs of DVI practitioners in the United States, covering the full spectrum of DVI from traditional methods such as fingerprints, odontology, and anthropology to advanced DNA identification technology. Approaching DVI from three perspectives—academic, government, and private industry—this comprehensive volume examines the history and current state of the discipline, the ongoing formation of national standards, the various methods of human identification, and the key challenges and future of DVI. In-depth chapters are written by leaders in the field with personal experience in human identification and mass fatality events. Provides practitioners with practical guidance on planning and taking part in DVI based on current national standards and best practices Discusses continued improvement in both traditional and emerging DVI methods Includes non-region-specific case studies and recommendations that can be easily adapted for international use Examines ethical and legal considerations in DVI, including suggestions for standardizing the victim identification process Describes the critical role of the Victim Information Center (VIC) in providing the comparative information required to go beyond presumptive identifications Part of the American Association for Forensic Sciences (AAFS) series, Disaster Victim Identification in the 21st Century: A US Perspective is an indispensable resource for forensic scientists, disaster planners, policymakers, medical examiners and coroners, law enforcement and emergency personnel, and upper-level undergraduate and graduate students in forensic sciences and emergency management.

The Age of Living Machines: How Biology Will Build the Next Technology Revolution Susan Hockfield,2019-05-07 From the former president of MIT, the story of the next technology revolution, and how it will change our lives. A century ago, discoveries in physics came together with engineering to produce an array of astonishing new technologies: radios, telephones, televisions, aircraft, radar, nuclear power, computers, the Internet, and a host of still-evolving digital tools. These technologies so radically reshaped our world that we can no longer conceive of life without them. Today, the world's population is projected to rise to well over 9.5 billion by 2050, and we are currently faced with the consequences of producing the energy that fuels, heats, and cools us. With temperatures and sea levels rising, and large portions of the globe plagued with drought, famine, and drug-resistant diseases, we need new technologies to tackle these problems. But we are on the cusp of a new convergence, argues world-renowned neuroscientist Susan Hockfield, with discoveries in biology coming together with engineering to produce another array of almost inconceivable technologies—next-generation products that have the potential to be every bit as paradigm shifting as the twentieth century's digital wonders. The Age of Living Machines describes some of the most exciting new developments and the scientists and engineers who helped create them. Virus-built batteries. Protein-based water filters. Cancer-detecting nanoparticles. Mind-reading bionic limbs. Computer-engineered crops. Together they highlight the promise of the technology revolution of the twenty-first century to overcome some of the greatest humanitarian, medical, and environmental challenges of our time.

Denying to the Grave Sara E. Gorman,Jack M. Gorman,2021-05-03 With science denial as a rising danger to public health, Sara E. Gorman and Jack M. Gorman analyze society's resistance to scientific evidence relating to health and safety, and the tools to combat these tendencies. Why do some parents decide not to vaccinate their children? Why do some people keep guns at home, despite ample evidence that doing so increases the risk of a gun-related injury? And why do people use antibiotics for illnesses that antibiotics cannot possibly alleviate? When it comes to health, many people believe that science is wrong, that the evidence is incomplete, and that unidentified hazards lurk everywhere. In *Denying to the Grave*, Sara Gorman and Jack Gorman explore the psychology of health science denial. Using several examples as case studies, they propose six key principles that may lead people to reject accepted health-related wisdom: the charismatic leader; fear of complexity; confirmation bias; fear of corporate and government conspiracies; causality and filling the ignorance gap; and the nature of risk prediction. This fully updated and expanded new edition of *Denying to the Grave* reviews the most recent research on health science denial, offering a brand new chapter on how the contemporary assault on science waged by certain political administrations has eroded public trust in national health and science agencies, such as CDC, FDA, and EPA. Also new to this edition is a chapter investigating the relationship between health crises and misinformation, and what happens to science denial amidst a global public health crisis. Finally, the book proposes a novel approach to counteracting misinformation and improving our ability to understand and accept scientific consensus. In an era in which trust in science has become more important, and yet more elusive, than ever before, *Denying to the Grave* sheds light on why we often choose to ignore scientific evidence, pointing the way toward a new understanding of how science should be conveyed to the public in order to save lives with existing knowledge and technology.
