  Analyzing Object-Oriented Systems with Software Quality Metrics Thida Oo,Aung Kyaw Oo,2011-01 Nowadays, Object-Oriented Technology (OOT) is widely appreciated in every area of computer science not only in academic atmosphere but also in commercial world. Authoring timely and efficient software only is not enough, also, but considering the upgrading, future change and maintenance of the software is becoming the inherent skills necessary for today's development teams. Some attributes of software quality would tell if the systems can be utilized efficiently in the long run. This calls for the rational assessment and evaluation of the existing systems. Measurement of coupling in collaboration with size measures will make way to estimate the resources such as human resource, time, cost, and machine resources for maintenance and evolution of the existing OO system. In this book, altogether six coupling measures together with eleven size measures are paid focus for the evaluation of the OO systems using statistical methods. The scope of the book is intended for the project managers, the software engineers, academics, practitioners and whoever interested in the development and maintenance of object-oriented software systems.

  Handbook of Quantitative Science and Technology Research Henk F. Moed,Wolfgang Glänzel,Ulrich Schmoch,2006-02-23 This handbook offers a state-of-the-art overview of quantitative science and technology research. It focuses on the development and application of indicators derived from data on scientific or scholarly publications and patents. It comprises 34 chapters written by leading specialists in the various sub-domains. These chapters deal with theoretical and methodological issues, illustrate applications, and highlight their policy context and relevance. Authors present a survey of the research topics they address, and show their most recent achievements. The 34 chapters are arranged into 5 parts: Disciplinary Approaches; General Methodology; The Science System; The Technology System; and The Science–Technology Interface. The Editor's Introduction provides a further specification of the handbook's scope and of the main topics addressed in its chapters. This handbook aims at four distinct groups of readers: – practitioners in the field of science and technology studies; – research students in this field; – scientists, scholars and technicians who are interested in a systematic, thorough analysis of their activities; – policy makers and administrators who wish to be informed about the potentialities and limitations of the various approaches and about their results.

  Reshaping Retail Stefan Niemeier,Andrea Zocchi,Marco Catena,2013-06-06 The modern retail system has worked to dazzling effect. From the 19th century, store owners emerged from small beginnings to set in train an industry that has seen some operators become nationally, even globally, dominant. Along the way, they turned retailing into an art, and then a science. Now retailers in emerging markets appear to be repeating the story all over again, except on a scale and at a speed beyond anything we have seen before. Given all of this, it can be hard for those who work in retailing to accept that the industry as we know it is living on borrowed time, on the brink of transformation. There is now an urgency with which conventional store-based retailers must now act and the extent of the challenges this change represents in strategic, organizational, and above all, technological terms. Reshaping Retail sets out the driving causes, current trends and consequences of a transformation in retail triggered by technology. The changes go far beyond making items available for sale on the internet. Starting by briefly setting the historical and business system contexts for retail and describe the role that technology has played in the creation of modern retail it then explains the underlying technological drivers behind the current revolution – radical changes in the capacity of both hardware and software, mobile telecommunications changes and the advances of the Internet. Ultimately, success will hinge on more than competence; it will come down to a way of thinking. Customer-centricity will need to be valued

not just by the store owner, as in the past, but also by all employees in the organization. It will need to become embedded in their daily tasks. The same applies to technology, which must be at the center of the organization and recognized as such by everyone. With a combination of extensive desk and field research, interviews with leading retailers and technologists, together with the real world experience of practitioners in this area, Reshaping Retail will inspire and help store retailers to make the necessary transformation now to win in the new consumer driven world.

Promoting Competition in Innovation Through Merger Control in the ICT Sector Kalpana Tyagi,2019-06-21 This book addresses the question of how competition authorities assess mergers in the Information Communication Technology (ICT) sector so as to promote competition in innovation. A closer look at the question reveals that it is far more complex and difficult to answer for the ICT, telecommunications and multi-sided platform (MSP) economy than for more traditional sectors of the economy. This has led many scholars to re-think and question whether the current merger control framework is suitable for the ICT sector, which is often also referred to as the new economy. The book pursues an interdisciplinary approach combining insights from law, economics and corporate strategy. Further, it has a comparative dimension, as it discusses the practices of the US, the EU and, wherever relevant, of other competition authorities from around the globe. Considering that the research was conducted in the EU, the practices of the European Commission remain a key aspect of the content.Considering its normative dimension, the book concentrates on the substantive aspects of merger control. To facilitate a better understanding of the most important points, the book also offers a brief overview of the procedural aspects of merger control in the EU, the US and the UK, and discusses recent amendments to Austrian and German law regarding the notification threshold. Given its scope, the book offers an invaluable guide for competition law scholars, practitioners in the field, and competition authorities worldwide.

Revolutionize Your Customer Experience Colin Shaw,2004-09-22 In his previous groundbreaking book with John Ivens, Colin Shaw looked at the development of the conceptual framework for the customer experience together with examples of best practice and strategies for implementation. As predicted the customer experience has become the next competitive battleground. The current book will explore the subject in more depth with new research and best practice and show companies and organizations how to identify where they are and how to revolutionize their customer experience.

Securing Job-to-job Transitions in the Labour Market Irmgard Borghouts-van de Pas,2012 Companies change their organization in response to crises, globalization, and increasing competition. Restructuring processes take place and part of the workforce is forced to find other employment. This book explores and explains employment security systems with a specific focus on job-to-job transitions for redundant employees in four European countries: Sweden, the United Kingdom, Austria, and Spain. In addition, it addresses possible lessons the Netherlands can learn from these foreign job-to-job arrangements. This multidisciplinary book will be of special interest to members of the European Commission, policymakers, and academics, as well as to students in the fields of labor market, social security, industrial relations, labor law, labor economics, and sociology.

Tissue Engineering Methods and Protocols Jeffrey R. Morgan,Martin L. Yarmush,1998-09-28 In recent years, the field of tissue engineering has begun, in part, to c- lesce around the important clinical goal of developing substitutes or repla- ments for defective tissues or organs. These efforts are focused on many tissues including skin, cartilage, liver, pancreas, bone, blood, muscle, the vascu- ture, and nerves. There is a staggering medical need for new and effective treatments for acquired as well as inherited defects of organs/tissues. Tissue engineering is at the interface of the life sciences, engineering, and clinical medicine and so draws upon advances in cell and molecular biology, mate- als sciences, and surgery, as well as chemical and mechanical engineering. Such an interdisciplinary field requires a broad knowledge base as well as the use of a wide assortment of methods and approaches. It is hoped that by bringing together these protocols, this book will help to form connections - tween the different disciplines and further stimulate the synergism underlying the foundation of the tissue engineering field.
