High Voltage Jim Motavalli, 2011-11-08 A behind-the-scenes look at the robustly competitive race to dominate the market for electric cars, the larger-than-life moguls behind them, and the changes that are transforming the auto industry. In the 1980s, it was unimaginable that the home computer would become as common and easy to use as a toaster. Today, plug-in charging stations and smart grids seem like something still far off in the future. But by 2020, the auto industry will look very different from today's field of troubled auto giants. The combination of technological breakthroughs and charging networks driven by global warming and peak oil makes it clear that revolutionary change in the auto industry is happening right now. In *High Voltage*, Jim Motavalli captures this period of unprecedented change, documenting the evolution from internal combustion engines to electric power. Driven by the auto world's ambitious and sometimes outlandish personalities, the book chronicles the race to dominate the market, focusing on big players like Tesla and Fisker, as well as a tiny start-up and a battery supplier. Flashing forward to the changes we'll see in the coming years, *High Voltage* shows a not-so-distant future where we will live on a smart grid, our cars fueling, that is, charging, while we shop or sleep. The ramifications of these changes will be on a grander scale than most of us ever imagined—altering foreign policy, reducing trade deficits, and perhaps even ending global warming.

Reinventing Fire Amory Lovins, 2013-10-07 Oil and coal have built our civilisation, created our wealth and enriched the lives of billions. Yet their rising costs to our security, economy, health and environment are starting to outweigh their benefits. Moreover, the tipping point where alternatives work better and compete purely on cost is not decades in the future - it is here and now. And that tipping point has become the fulcrum of economic transformation. In *Reinventing Fire*, Amory Lovins

and the Rocky Mountain Institute offer a new vision to revitalise business models and win the clean energy race - not forced by public policy but led by business for long-term advantage. This independent and rigorous account offers market-based solutions integrating transportation, buildings, industry and electricity. It maps pathways for running a 158%-bigger US economy in 2050 but needing no oil, no coal, no nuclear energy, one-third less natural gas and no new inventions. This transition would cost \$5 trillion less than business-as-usual - without counting fossil fuels' huge hidden costs. Whether you care most about profits and jobs, or national security, or environmental stewardship, climate, and health, Reinventing Fire makes sense. It's a story of astounding opportunities for creating the new energy era. -- Publisher description.

Bottled Lightning Seth Fletcher, 2011-05-10 Lithium batteries may hold the key to an environmentally sustainable, oil-independent future. From electric cars to a smart power grid that can actually store electricity, letting us harness the powers of the sun and the wind and use them when we need them, lithium—a metal half as dense as water, found primarily in some of the most uninhabitable places on earth—has the potential to set us on a path toward a low-carbon energy economy. In *Bottled Lightning*, the science reporter Seth Fletcher takes us on a fascinating journey, from the salt flats of Bolivia to the labs of MIT and Stanford, from the turmoil at GM to cutting-edge lithium-ion battery start-ups, introducing us to the key players and ideas in an industry with the power to reshape the world. Lithium is the thread that ties together many key stories of our time: the environmental movement; the American auto industry, staking its revival on the electrification of cars and trucks; the struggle between first-world countries in need of natural resources and the impoverished countries where those resources are found; and the overwhelming popularity of the portable, Internet-connected gadgets that are changing the way we communicate. With nearly

limitless possibilities, the promise of lithium offers new hope to a foundering American economy desperately searching for a green-tech boom to revive it.

All-in Olivier Ducher, 2024-01-17 Nico, un véritable flambeur, risque audacieusement sa vie au jeu du pile ou face. Il fréquente l'établissement de son ami Jo, où rôdent ses anciens compagnons devenus dangereux, à qui il doit malheureusement une somme considérable d'argent. Ils parviennent finalement à trouver un accord pour résoudre leur différend. Cependant, le décès soudain de Jo amène Nico à prendre soin de la fille de son ami, l'obligeant ainsi à assumer le rôle de père, malgré la passion amoureuse qui les anime tous les deux. À PROPOS DE L'AUTEUR Olivier Ducher, un élève doué mais distrait, abandonne l'école après avoir échoué à son BEPC. Il refuse de se résigner à des emplois précaires et s'engage volontairement pour servir en Afrique à l'âge de dix-huit ans. Mais à son retour à vingt ans, il était devenu apathique. Traversant le temps, sans se soucier ni des règles ni des lois, ce qui lui vaudra quelques années d'incarcération, il décide de raconter des histoires, en mélangeant une partie de sa vie tumultueuse avec des morceaux piochés dans celles de certaines de ses connaissances.

Le contrat Fabrice Lhomme,Fabrice Arfi,2010-05-19 Enquêter sur l'affaire de Karachi, c'est un peu comme essayer d'ouvrir un coffre-fort enfoui dans les sous-sols de l'État. Rares sont ceux qui veulent faire le casse avec vous. L'affaire de Karachi débute le 8 mai 2002. Ce jour-là, à six mille kilomètres de Paris, onze ingénieurs et techniciens français de la Direction des constructions navales (DCN) sont tués dans un attentat à la voiture piégée au Pakistan. Al-Qaida est immédiatement désigné comme responsable. Très vite, la raison d'État s'empare du dossier. Comme dans une poupée russe, une

deuxième affaire va s'emboîter dans la première. Les employés de la DCN morts à Karachi travaillaient à l'exécution d'un contrat d'armement signé en toute hâte le 21 septembre 1994 par le gouvernement d'Édouard Balladur. Un an avant l'élection présidentielle. Nom du contrat : Agosta. Montant de l'opération : 825 millions d'euros. Derrière Agosta se cache en réalité une incroyable affaire de corruption internationale où l'on voit défiler intermédiaires sulfureux, commissions occultes, paradis fiscaux et appétits politiques voraces. Après plus de deux ans d'enquête, les auteurs livrent aujourd'hui de nombreux témoignages et documents inédits sur une affaire d'États dont ils ont pu établir que l'un des principaux acteurs est un certain Nicolas Sarkozy. Un ouvrage aux multiples révélations qui jette une lumière crue sur le business étatique des ventes d'armes et son corollaire, le financement occulte de la vie politique française. Le trou noir de la République.

Based on these comparisons, treatment recommendation for AVM is articulated. Furthermore, the long-term efficacy of different treatment is discussed. This book is written by an international group of European authors, and is aimed at neurovascular surgeons and neurosurgical residents.

Gastrointestinal Pathology Geraint T. Williams, 2012-12-06 There have been many advances in the field of gastrointestinal pathology which are of considerable clinical significance during the 13 years since the last publication of a volume of Current Topics in Pathology devoted to this subject. Many have arisen from the application of new techniques of histochemistry, immunocytochemistry, quantitative morphometry and molecular and cell biology to gastrointestinal diseases, but some,

notably the recognition of the association of *Campylobacter pylori* with the commonest type of chronic gastritis, have been achieved using such long established 'routine' histological procedures that one wonders how their significance had escaped recognition for so long. The topics covered in this volume have been selected because they present advances of relevance to the diagnostic clinical pathologist. However, they represent the personal selection of the editor, and are in no way exhaustive. Many other examples of progress in our understanding of the pathophysiology of gastrointestinal diseases have been omitted, either because of the confines of space or because they have been well reviewed recently in other publications. Most of the workload of the practising gastrointestinal pathologist involves the diagnosis and assessment either of inflammation or of neoplasia in the alimentary tract, and this is reflected in the topics presented in this book.

Cerebrovascular Neurosurgery Dr Peter Nakaji, Dr Michael Levitt, 2019-08-15 Part of the Neurosurgery by Example series, this volume on cerebrovascular neurosurgery presents exemplary cases in which renowned authors guide readers through the assessment and planning, decision making, surgical procedure, after care, and complication management of common and uncommon disorders. The cases explore the spectrum of clinical diversity and complexity within cerebrovascular neurosurgery, including aneurysms, ischemic/occlusive disease, arteriovenous malformation, dural arteriovenous fistula, and more. Each chapter also contains 'pivot points' that illuminate changes required to manage patients in alternate or atypical situations, and pearls for accurate diagnosis, successful treatment, and effective complication management. Containing a focused review of medical evidence and expected outcomes, Cerebrovascular Neurosurgery is appropriate for neurosurgeons who wish to learn more about a subspecialty, and those preparing for the American Board of Neurological Surgery oral examination.
