The Insect Crisis: The Fall of the Tiny Empires That Run the World Oliver

Milman,2022-03-01 A devastating examination of how collapsing insect populations worldwide threaten everything from wild birds to the food on our plate. From ants scurrying under leaf litter to bees able to fly higher than Mount Kilimanjaro, insects are everywhere. Three out of every four of our planet's known animal species are insects. In *The Insect Crisis*, acclaimed journalist Oliver Milman dives into the torrent of recent evidence that suggests this kaleidoscopic group of creatures is suffering the greatest existential crisis in its remarkable 400-million-year history. What is causing the collapse of the insect world? Why does this alarming decline pose such a threat to us? And what can be done to stem the loss of the miniature empires that hold aloft life as we know it? With urgency and great clarity, Milman explores this hidden emergency, arguing that its consequences could even rival climate change. He joins the scientists tracking the decline of insect populations across the globe, including the soaring mountains of Mexico that host an epic, yet dwindling, migration of monarch butterflies; the verdant countryside of England that has been emptied of insect life; the gargantuan fields of U.S. agriculture that have proved a killing ground for bees; and an offbeat experiment in Denmark that shows there aren't that many bugs splattering into your car windshield these days. These losses not only further tear at the tapestry of life on our degraded planet; they imperil everything we hold dear, from the food on our supermarket shelves to the medicines in our cabinets to the riot of nature that thrills and enlivens us. Even insects we may dread, including the hated cockroach, or the stinging wasp, play crucial ecological roles, and their decline would profoundly shape our own story. By connecting butterfly and bee, moth and beetle from across the globe, the full scope of loss renders a portrait of a crisis that threatens to upend the workings of our collective history. Part warning, part celebration of the incredible variety of insects, *The Insect Crisis* is a wake-up call for us all.

House Guests, House Pests Richard Jones, 2015-02-12 Today we live in snug, well-furnished houses surrounded by the trappings of a civilised life. But we are not alone – we suffer a constant stream of unwanted visitors. Our houses, our food, our belongings, our very existence are under constant attack from a host of invaders eager to take advantage of our shelter, our food stores and our tasty soft furnishings. From bats in the belfry to beetles in the cellar, moths in the wardrobe and mosquitoes in the bedroom, humans cannot escape the attentions of the animal kingdom. Nature may be red in tooth and claw, but when it's our blood the bedbugs are after, when it's our cereal bowl that's littered with mouse droppings, and when it's our favourite chair that collapses due to woodworm in the legs, it really brings it home the fact that we and our homes are part of nature too. This book represents a 21st century version of the classic Mediaeval bestiary. It poses questions such as where these animals came from, can we live with them, can we get rid of them, and should we? Written in Richard Jones's engaging style and with a funky-retro design, *House Guests, House Pests* will be a book to treasure.

Robin Stewart's Chemical Free Pest Control Robin Stewart, 2002 Do you really want to breathe in high concentrations of expensive hazardous chemicals from products such as pest strips and aerosol cans? Frequent chemical pest control can render the air in your home a toxic cocktail of dangerous pesticides. Robin demonstrates that by treating pests yourself, rather than resorting to expensive professionals, you can decide what method or product is used and how much.
