*Interface Oral Health Science 2011* Keiichi Sasaki, 2012-03-02 Interface oral health science was founded on the concept that healthy oral function is maintained by biological and biomechanical harmony between three systems: oral tissues, parasitic oral microorganisms, and biomaterials. On that basis, dental caries, periodontal disease, and temporomandibular joint disorders may be regarded as interface disorders that result from a disruption in the intact interface of these systems. Interface oral health science encompasses the fields of dentistry and dental medicine, but also extends to general medicine, agriculture, biomaterials science, bioengineering, and pharmacology. This book is a compendium of the research presented at symposiums held in 2011 by the Tohoku University Graduate School of Dentistry and by the Forsyth Institute. Its publication is intended provide further impetus for the progress of oral science and health, pointing the way for dental research for future generations.

*The Influence of Chemistry on New Foods and Traditional Products* Giampiero Barbieri, Caterina Barone, Arpan Bhagat, Giorgia Caruso, Zachary Ryan Conley, Salvatore Parisi, 2014-09-13 This Brief concerns the influence of chemistry in the modern food and beverages industry. The world of traditional foods has been soundlessly but increasingly interconnected with the chemical industry in the last century. Different areas are considered in a multidisciplinary approach: - the production of chemical additives and of non-food components needed in the food industry (e.g. packaging materials) - the regulatory perspective of the whole food production chain - commercialization of food commodities - the problem of food safety from the viewpoint of official auditors with medical or veterinarian competencies - new and emerging risks related to food packaging materials - the assessment of the authenticity of edible products. This Brief includes different viewpoints, ranging from the management of allergens and food additives in the food plant to the complex matter of the formulation of traditional products with the consequent production of “alternative” versions of the same food.

*Design and Architecture for Signal and Image Processing* Miguel Chavarrías, Alfonso Rodríguez, 2023-04-26 This book constitutes the thoroughly refereed conference proceedings of the 16th International Workshop on Design and Architecture for Signal and Image Processing, DASIP 2023, held in Toulouse, France in January 2023. **Social Representations for the Anthropocene: Latin American Perspectives** Clarilza Prado de Sousa, Serena Eréndira Serrano Oswald, 2021-04-30 The Anthropocene has become a field of studies in which the influence of human activity on the Earth System and nature is both the main threat and the potential solution. Social Representations Theory has been evolving since the 1960s. It links knowledge and practice in everyday life and is an effective way to deal with systemic crises based on common sense. This book assembles key contributions by Latin American scholars working with social representations in the social sciences that are of conceptual relevance to the study of the Anthropocene and that investigate the societal consequences of complex interrelations between common sense and topics of global relevance, such as the contradictions of sustainable development, the construction of risks beyond risk-perception, health, negotiation and governance in the field of education, gender equality, the usefulness of longitudinal and systemic ethnography and case studies, and agency and the link between inequality, crises and risk society in the context of COVID-19, presenting theoretical and methodological innovations from Spanish, Portuguese and French research that have rarely been available in English. • This is the first book to address the relevance of Social Representations Theory for the Anthropocene as a societal era • It presents the multidisciplinary scope of Social Representations • This book covers emerging research contributions in Social Representations Theory from Latin America • This book presents innovative research and commentaries by established researchers in the field • This multidisciplinary book should be in the libraries of many disciplines in the social sciences and humanities

Proceedings of the 2012 International Conference on Information Technology and Software Engineering Wei Lu, Guoqiang Cai, Weibin Liu, Weiwei Xing, 2012-11-05 Proceedings of the 2012 International Conference on Information Technology and Software Engineering presents selected articles from this major event, which was held in Beijing, December 8-10, 2012. This book presents the latest research trends, methods and experimental results in the fields of information technology and software engineering, covering various state-of-the-art research theories and approaches. The subjects range from intelligent computing to information processing, software engineering, Web, unified modeling language (UML), multimedia, communication technologies, system identification, graphics and visualizing, etc. The proceedings provide a major interdisciplinary forum for researchers and engineers to present the most innovative studies and advances, which can serve as an excellent reference work for researchers and graduate students working on information technology and software engineering. Prof. Wei Lu, Dr. Guoqiang Cai, Prof. Weibin Liu and Dr. Weiwei Xing all work at Beijing Jiaotong University.

**Automated Reasoning for Security Protocol Analysis and Issues in the Theory of Security** Alessandro Armando, Gavin Lowe, 2010-10-08 This book constitutes the proceedings of the Joint Workshop on Automated Reasoning for Security Protocol Analysis and Issues in the Theory of Security held in Paphos, Cyprus, in March 2010.

Computational Intelligence and Information Technology Vinu V Das, Nussy Thankachan, 2011-12-10 This book constitutes the proceedings of the First International Conference on Computational Intelligence and Information Technology, CIIT 2011, held in Pune, India, in November 2011. The 58 revised full papers, 67 revised short papers, and 32 poster papers presented were carefully reviewed and selected from 483 initial submissions. The papers are contributed by innovative academics and industrial experts in the field of computer science, information technology, computational engineering, mobile communication and security and offer a stage to a common forum, where a constructive dialog on theoretical concepts, practical ideas and results of the state of the art can be developed.

**Modeling, Programming and Simulations Using LabVIEW™ Software** Riccardo de Asmundis, 2011-01-21 Born originally as a software for instrumentation control, LabVIEW became quickly a very powerful programming language, having some peculiar characteristics which made it unique: the simplicity in creating very effective Users Interfaces and the G programming mode. While the former allows designing very professional controls panels and whole Applications, completed with features for distributing and installing them, the latter represents an innovative and enthusiastic way of programming: the Graphical representation of the code. The surprising aspect is that such a way of conceiving algorithms is absolutely similar to the SADT method (Structured Analysis and Design Technique) introduced by Douglas T. Ross and SofTech, Inc. (USA) in 1969 from an original idea of MIT, and extensively used by US Air Force for their projects. LabVIEW practically allows programming by implementing straightly the equivalent of an SADT actigram. Beside this academical aspect, LabVIEW can be used in a variety of forms, creating projects that can spread over an enormous field of applications: from control and monitor software to data treatment and archiving; from modeling to instruments controls; from real time programming to advanced analysis tools with very powerful mathematical algorithms ready to use; from full integration with native hardware (by National Instruments) to an easy implementation of drivers for third party hardware. In this book a collection of different applications which cover a wide range of possibilities is presented. We go from simple or distributed control software to modeling done in LabVIEW; from very specific applications to usage in the educational environment.

*Chemical Profiles of Industrial Cow’s Milk Curds* Caterina Barone,Marcella Barbera,Michele Barone,Salvatore Parisi,Izabela Steinka,2016-12-20 This Brief explores the chemistry and production technology of a cheese precursor: the cow’s milk curd. It explains how different coagulation and treatment methods can be used to obtain various types of cheeses. Parameters such as the type of used milk, the coagulation method, pH value, color, and microbial fermentation have a profound impact on the resulting curd properties, and hence on the cheese. The authors discuss some of the most important parameters, and how their modification can lead to a variety of cheese and dairy products. This Brief also addresses the question, if cheese makers can standardize their production procedures, and what role chemistry may play in that. Another important point addressed here are the sources of failures in the curd production, e.g. in packaging systems. Readers will find selected examples of helpful analytical techniques for studying and evaluating curd quality, and for monitoring the chemical evolution of selected chemical substances or protein aggregation.

*Managing Inflation and Supply Chain Disruptions in the Global Economy* Akkucuk, Ulas,2022-08-15 As the COVID-19 pandemic comes to a close, inflation has revealed itself to be a major problem for all countries of the developed world. The problem has been exacerbated in developing nations, which had problems even before the pandemic. Energy prices have increased, and with the increase in transportation costs, it has been more difficult for many retailers to stock shelves as they did before the pandemic. It is understood by many that the rising prices and supply chain disruptions will likely not be temporary and must be managed by future executives. Managing Inflation and Supply Chain Disruptions in the Global Economy uncovers the many ways businesses can manage this new phenomenon. It discusses global crises and their effects on the global economy in terms of inflation and supply chain. Covering topics such as inflationist impact, crisis leadership, and deglobalization, this premier reference source is an essential resource for economists, supply chain specialists, government officials, consultants, business leaders and executives, logistics professionals, IT managers, students and educators of higher education, researchers, and academicians.

**Novel Innovation Design for the Future of Health** Michael Friebe,2022-11-26 This book highlights the reasons for an urgently needed revision of the current global healthcare setup, discusses the needed mindset for a future of health, and provides a comprehensive development toolset for disruption (and for the needed incremental innovations towards disruption). Today’s biomedical and health innovation related research in universities encourages activities that lead to incremental innovations with a relatively low risk of failure. The healthcare industry on the other hand provides tools and devices for established healthcare providers to improve the diagnosis and therapy/ treatment of the patients’ health problems. The patient is not in the center of healthcare provision however, and prevention and prediction are not core goals. The current health setup needs to be challenged and disrupted. Disruptions are coming from technologies or processes that lead to a significant (>10x) reduction in cost or price/ performance and that also come with new business models. The need for change, effects of exponential technologies, and the needed shift to prevention and to homecare for health democratization and patient empowerment will be discussed in detail in the first parts of the book. The subsequent sections address several innovation methods with a focus on a novel meta methodology named Purpose Launchpad Health. This is followed by a comprehensive discussion on health entrepreneurship activities and needs. The final section of the book addresses how to train students to become entrepreneurial health innovators, presenting successful curricula and examples of health incubation and accelerator setups. All of the innovation tools presented and used in this book are summarized in the final chapter to help the reader get started planning an entrepreneurial venture. Written by experts from academia and industry, the book covers important basics and best practices, as well as recent developments. Chapters are concise and enriched with key messages, learning objectives and real innovation examples to bridge theory and practice. This book aims to serve as a teaching base for health innovation design and to prepare for health-related entrepreneurial ventures. Readers with medical, biomedical, biotechnology, and health economics backgrounds - and anyone who wants to become a future oriented health innovator or who believes in disruptive approaches - will find this book a useful resource and teaching tool for developing validated products/ services and processes for the future of health.
