Advanced Hybrid Information Processing Lin Yun,
Introduction to Information Retrieval

Christopher D. Manning, Prabhakar Raghavan, Hinrich Schütze, 2008-07-07 Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures.

World Development and Economic Systems S I Cohen, 2015-03-18 Mainstream economics generally assumes a universalistic market-oriented economic behavior that drives countries to adopt one economic system, with marginal variations. This book extends the scope of theory and applications by asserting that other distinct behaviors evolve and dominate in other economic systems. Systemic differences arise from distinct social, political and economic behavioral-motivational types that associate with intensive agent activity in household, state and firm settings. External conditions, historical events, and agent interactions ultimately result in domination of one motivational type over others; thus determining distinct profiles of structure, conduct, and performance in different economic

systems, that are generally observed in the adopting countries. The book validates the theory empirically, traces the historical evolution of the respective economic systems in the world regions and evaluates their responses to various systemic failures such as monopoly, uncertainties, externalities and collective needs. The evaluation is extended to structural changes and system performance regarding growth and distribution. This book draws on microeconomics, welfare economics, development economics and the international economy. The book projects the influence potential of leading countries/systems, and treats effects of displacement of incumbent leaders (US, Japan) by newcomer leaders (China, India) on system competition and on world governance. Contents: Introduction An Integrative Theory of Economic Systems Empirical Validations Evolution and Evaluation of the Firm Intensive System in FIS-Centered Countries Evolution and Evaluation of the State Intensive System in SIS-Oriented Countries Economic Systems in the Development Regions Focus on China and India as Upcoming Global Leaders System Competition and World Governance in the Near Future Readership: Professionals working in the areas of economic systems, transitions, development and policy making; instructors and students of economics and finance; consultants and officials in international agencies working in fields related to economics and development. Key Features: Unique book that examines the topics of development economics, economic systems and world development as a coordinated whole The book presents a comprehensive theory that relates evolution of economic systems and world development to each other Analyzes historical timelines in the evolution of market- and state-oriented economic systems in western industrial and transition countries; and evaluates their

Periodically Correlated Random Sequences Harry L. Hurd, Abolghassem Miamee, 2007-10-05
Uniquely combining theory, application, and computing, this book explores the spectral approach to time series analysis. The use of periodically correlated (or cyclostationary) processes has become increasingly popular in a range of research areas such as meteorology, climate, communications, economics, and machine diagnostics. *Periodically Correlated Random Sequences* presents the main ideas of these processes through the use of basic definitions along with motivating, insightful, and illustrative examples. Extensive coverage of key concepts is provided, including second-order theory, Hilbert spaces, Fourier theory, and the spectral theory of harmonizable sequences. The authors also provide a paradigm for nonparametric time series analysis including tests for the presence of PC structures. Features of the book include: * An emphasis on the link between the spectral theory of unitary operators and the correlation structure of PC sequences * A discussion of the issues relating to nonparametric time series analysis for PC sequences, including estimation of the mean, correlation, and spectrum * A balanced blend of historical background with modern application-specific references to periodically correlated processes * An accompanying Web site that features additional exercises as well as data sets and programs written in MATLAB® for performing time series analysis on data that

may have a PCstructure Periodically Correlated Random Sequences is an ideal text on time series analysis for graduate-level statistics and engineering students who have previous experience in second-order stochastic processes (Hilbert space), vector spaces, random processes, and probability. This book also serves as a valuable reference for research statisticians and practitioners in areas of probability and statistics such as time series analysis, stochastic processes, and prediction theory.

Peptide Drug Discovery and Development Miguel Castanho, Nuno Santos, 2011-10-24 Filling a real knowledge gap, this handbook and ready reference is both modern and forward-looking in its emphasis on the bench to bedside translational approach to drug development. Clearly structured into three major parts, the book stakes out the boundaries of peptide drug development in the preclinical as well as clinical stages. The first part provides a general background and focuses on the characteristic strengths and weaknesses of peptide drugs. The second section contains five cases

studies of peptides from diverse therapeutic fields, and the lessons to be learned from them, while the final part looks at new targets and opportunities, discussing several drug targets and diseases for which peptide drugs are currently being developed.
