Royal Mounds of A'ali in Bahrain Steffen Terp

Laursen,2017-12-21 The Royal Mounds of A'ali in Bahrain has long been shrouded in mystery and suspected to be the final resting place of the Bronze Age kings of Dilmun. Puzzled by their great size explorers and professional archaeologists have for hundreds of years attempted to penetrate their interior and wrestle secrets and treasures from the tombs. This book presents information from the early days of archaeological exploration at A'ali as well as new data from the joint Bahrain - Moesgaard Museum investigations 2010 -2016 directed by the author. The evidence from both old and new field explorations at A'ali are meticulously analyzed. The results are discussed with a strong focus on the royal cemetery as an institution, using a theoretical approach based on the anthropology and ethnography of death rituals. Emphasis is also placed on developing an architectural typology and a radio-carbon based chronology of the royal tombs at A'ali. In this study, vast quantities of hitherto unpublished data from excavations in the burial mounds of Bahrain is integrated to allow a more informed and diachronic picture of the evolution in tomb architecture, death rituals and social organization in the Early Dilmun period, c. 2200-1700 BC. Philological evidence is presented which demonstrates that the entombed kings were of Amorite ancestry. The study reveals that the Amorite Dynasty buried at A'ali emerged with the formation of huge monumental tombs in a royal cemetery proper around 2000-1900 BC and lost its grip on power c. 1700 BC.

Practical Archaeogaming Dr. Andrew Reinhard,2024-05-03 As a sequel to Archaeogaming: an Introduction to Archaeology in and of Video Games, the author focuses on the practical and applied side of the discipline, collecting recent digital fieldwork together in

one place for the first time to share new methods in treating interactive digital built environments as sites for archaeological investigation. Fully executed examples of practical and applied archaeogaming include the necessity of a rapid archaeology of digital built environments, the creation of a Harris matrix for software stratigraphy, the ethnographic work behind a human civilization trapped in an unstable digital landscape, how to conduct photogrammetry and GIS mapping in procedurally generated space, and how to transform digital artifacts into printed three-dimensional objects. Additionally, the results of the 2014 Atari excavation in Alamogordo, New Mexico are summarized for the first time.

It Must've Been Something I Ate Jeffrey

Steingarten,2008-11-26 In this outrageous and delectable new volume, the Man Who Ate Everything proves that he will do anything to eat everything. That includes going fishing for his own supply of bluefin tuna belly; nearly incinerating his oven in pursuit of the perfect pizza crust, and spending four days boning and stuffing three different fowl—into each other-- to produce the Cajun specialty called “turducken.” *It Must’ve Been Something I Ate* finds Steingarten testing the virtues of chocolate and gourmet salts; debunking the mythology of lactose intolerance and Chinese Food Syndrome; roasting marrow bones for his dog , and offering recipes for everything from lobster rolls to gratin dauphinois. The result is one of those rare books that are simultaneously mouth-watering and side-splitting.

Oil Shales Miryam Glikson-Simpson,2021-02-08 This book provides thorough knowledge and detailed information of oil

shales using a range of conventional and unconventional techniques and methodologies combined to elucidate the composition of oil shale deposits. As these rocks are mined for energy production their composition and mineral constituents are of special interests to individuals and communities that are likely to be effected by these resources when mined and processed. The book highlights the environmental and health hazards of the spent shales after processing. These are significantly greater in volume than the rocks originally mined before processing. Toxic metals tend to double and triple their concentrations in the spent shales and will be leached into water sources and soils. Since oil shales as an energy resource are totally uneconomical; all oil shales, their mining and processing are heavily subsidised by governments and institutions using taxpayers money.

Coal—A Window to Past Climate and Vegetation Miryam Glikson-Simpson, 2020-06-30 This book focuses on the Permian time slice in the geological history of Gondwana, which includes Australia, India, South Africa, Antarctica and South America. Coal is an organic rock, the product of compressed and 'cooked' plants. The exact formation of coal via physicochemical reactions, burial and subsidence is the subject of numerous books. The vast thick coal deposits characterising Gondwana formed from special kind of trees termed the Glossopteris Flora. These trees shed their leaves in winter and with the rest of their remains decayed and through subsidence and burial formed the coal. Pollen preserved from these plant communities has been concentrated and isolated and is the focus of this book. The first plant communities as can be seen from the pollen graphs in this book were impoverished in species. The Permian era started with a very cold climate and as the climate warmed more and more diverse vegetation took hold. The emergence of different forms of pollen at certain times in the Permian is used as an indicator of climatic change. Furthermore, the predominance of algal spores in some samples and lack of representation by pollen of Glossopteris point to significant

changes in the climate which led to the disappearance of their pollen and the accumulation of spores representing algal communities. These climate induced changes are noticed in their completed transformation after a long time span; small changes are evident during a lifetime of Earth's inhabitants. Today, in our lifetime, we can see and witness the drying of many lakes across the Earth and their total disappearance from maps of only 50 years ago is a testimony to a climatic change taking place. The time of a 'complete' change in the Permian is possible to calculate. However, to determine the duration and maximum change in the climate of the earth today is impossible due to the apparent acceleration of the process by industrial activities of our species. Chapter 4 in the book deals with the special characteristics of the Permian coals of Gondwana and the special plant community which made them. The composition of these coals on a microscopic level shows them to be rich in hydrocarbons, more than other coals. The Permian coals of India and Australia generate 'heavy' oil which is retained within the coal matrix as bitumen and is a potential source of methane. This chapter demonstrates through a pilot study the potential for explosion in the Permian Gondwana coals through their propensity to spontaneous combustion and methane generation.
