**Affordances and Constraints of Mobile Phone Use in English Language Arts Classrooms** Moran, Clarice M.,2020-12-25 The use of phones in the classroom is a controversial topic that receives a variety of reactions and can have political ramifications. In various school districts across different states, as well as in some countries, cell phone usage has been banned in the classroom to combat what administrators say is a distracted student population. However, research demonstrates that cell phones can have a positive effect on learning and engagement. Instead of banning cell phones, some teachers have found ways to incorporate educational apps, gaming apps, and social media into course materials. Although much research has emerged involving the integration of technology and digital literacies in English language arts (ELA) classrooms, mobile phone use as a discrete construct has not been explored widely. Affordances and Constraints of Mobile Phone Use in English Language Arts Classrooms aims to shine a light on the controversial topic of mobile phones in the English language arts classroom, focusing on comparing the opportunities that they afford students, as well as the negative effects they can have on learning. The chapters within this book examine learning outcomes, best practices, and practical applications for using mobile phones in ELA and adds to the body of literature on mobile phone use in secondary classrooms in general, standing as a unique resource on mobile phones in the language arts curriculum. While highlighting topics that include gaming applications, online learning, student engagement, and classroom management, this book is ideally designed for inservice and preservice teachers, administrators, teacher educators, practitioners, stakeholders, researchers, academicians, and students who are interested in learning more about the pluses and minuses of mobile phone use in ELA.

**The Dynamics of Broadband Markets in Europe** Wolter Lemstra, William H. Melody, 2014-10-23 The European Commission's Digital Agenda for Europe sets the targets for broadband development by 2020, yet current broadband market outcomes vary widely amongst the EU Member States and the objectives seem challenging for many. In this book, a group of in-country experts follows a framework of qualitative and quantitative analysis to capture patterns, commonalities and differences between twelve different European countries, in terms of infrastructure endowments, institutional arrangements, time of joining the EU, behavior of market actors, personal interventions of regulators, the role of municipalities, and the role perception of governments. By exploring how the past explains present broadband market outcomes, these longitudinal country case studies look to how improvements can be made for the future. As the first in-depth study of broadband developments in Europe, this book will be invaluable to policy-makers, regulators, academic researchers, advisors, and consultants working in the fields of telecommunications, broadband development, technology and innovation.

Mobile Communication and Society Manuel Castells, Mireia Fernandez-Ardevol, Jack Linchuan Qiu, Araba Sey, 2009-09-18 How wireless technology is redefining the relationship of communication, technology, and society around the world—in everyday work and life, in youth culture, in politics, and in the developing world. Wireless networks are the fastest growing communications technology in history. Are mobile phones expressions of identity, fashionable gadgets, tools for life—or all of the above? Mobile Communication and Society looks at how the possibility of multimodal communication from anywhere to anywhere at any time affects everyday life at home, at work, and at school, and raises broader concerns about politics and culture both global and local. Drawing on data gathered from around the world, the authors explore who has access to wireless technology, and why, and analyze the patterns of social differentiation seen in unequal access. They explore the social effects of wireless communication—what it means for family life, for example, when everyone is constantly in touch, or for the idea of an office when workers can work anywhere. Is the technological ability to multitask further compressing time in our already hurried existence? The authors consider the rise of a mobile youth culture based on peer-to-peer networks, with its own language of texting, and its own values. They examine the phenomenon of flash mobs, and the possible political implications. And they look at the relationship between communication and development and the possibility that developing countries could leapfrog directly to wireless and satellite technology. This sweeping book—moving easily in its analysis from the United States to China, from Europe to Latin America and Africa—answers the key questions about our transformation into a mobile network society.

**Geomedia Studies** Karin Fast,André Jansson,Johan Lindell,Linda Ryan Bengtsson,Mekonnen Tesfahuney,2017-09-18 This book introduces and develops the concept of geomedia studies as the name of a particular subfield of communication geography. Despite the accelerating societal relevance of 'geomedia' technologies for the production of various spaces, mobilities, and power-relations, and the unquestionable emergence of a vibrant research field that deals with questions pertaining to such topics, the term geomedia studies remains surprisingly unestablished. By addressing imperative questions about the implications of geomedia technologies for organizations, social groups and individuals (e.g. businesses profiting from geo-surveillance, refugees or migrants moving across national borders, or artists claiming their rights to public space) the book also aims to contribute to ongoing academic and societal debates in our increasingly mediatized world.
