Panorama Wilhelm Wurzer,2003-01-01 The new electronic age has seen a radical transition from book to screen, a development which has obscured the fact that it is not what we see which matters but how we see what we see. We live in a time when the visible needs to be retheorised.Panorama presents a broad analysis of philosophies of the visible in art and culture, particularly in painting, film, photography, and literature. The work of key philosophers--Kant, Hegel, Nietzsche, Heidegger, Levinas, Barthes, Blanchot, Foucault, Bataille, Derrida, Lyotard and Deleuze--is examined in the

context of visibility, expressivity, the representational and the postmodern. Contributors: Zsuzsa Baross, Robert Burch, Alessandro Carrera, Dana Hollander, Lynne Huffer, Volker Kaiser, Reginald Lilly, Robert S. Jeff Wall and the Concept of the Picture Naomi Merritt,2020-12-30 This book grapples with fundamental questions about the evolving nature of pictorial representation, and the role photography has played in this ongoing process. These issues are explored through a close analysis of key themes that underpin the photography practice of Canadian artist Jeff Wall and through examining important works that have defined his oeuvre. Wall's strategic revival of 'the picture' has had a resounding influence on the development of contemporary art photography, by expanding the conceptual and technical frameworks of the medium and introducing a self-reflexive criticality. Naomi Merritt brings a new and original contribution to the scholarship on one of the most significant figures

to have shaped the course of contemporary art photography since the 1970s and shines a light on the multilayered connections between photography and art. This book will be of interest to scholars in the history of photography, art and visual culture, and contemporary art history.

A Panorama of Linguistic Landscape Studies Durk Gorter,Jasone Cenoz,2023-10-10 Language is on display all around us, all the time, and the study of this linguistic landscape is one of the fastest-growing areas of research in applied linguistics. Ecological Psychology in Context Harry Heft,2001-07 In this book Harry Heft examines the historical and theoretical foundations of James J. Gibson's ecological psychology in 20th century thought, and in turn, integrates ecological psychology and analyses of sociocultural processes. A thesis of the book is that knowing is rooted in the direct experience of meaningful environmental

objects and events present in individual-environment processes and at the level of collective, social settings. Ecological Psychology in Context: *traces the primary lineage of Gibson's ecological approach to William James's philosophy of radical empiricism; *illuminates how the work of James's student and Gibson's mentor, E.B. Holt, served as a catalyst for the development of Gibson's framework and as a bridge to James's work; *reveals how ecological psychology reciprocally can advance Jamesian studies by resolving some of the theoretical difficulties that kept James from fully realizing a realist philosophy; *broadens the scope of Gibson's framework by proposing a synthesis between it and the ecological program of Roger Barker, who discovered complex systems operating at the level of collective, social processes; *demonstrates ways in which the psychological domain can be extended to properties of the environment rendering its features meaningful, publicly accessible, and distributed across person-environment processes; and *shows how Gibson's work points the way toward overcoming the gap between experimental psychology and the humanities. Intended for scholars and students in the areas of ecological and environmental psychology, theoretical and historical psychology, cognitive science, developmental psychology, anthropology, and philosophy.

Conceptual Metaphors as an Organisational Framework of the Specialist Language of IT
Magdalena Krawiec,2022-06-13 Magdalena Krawiec provides insight into the underlying conceptual
structure of information technology and gives a plausible account of the patterns of metaphorical
conceptualisation manifested in the specialist language of IT. Conceptual metaphors map our
concrete experience onto abstract experiences, so as to effortlessly get hold of new emergent
concepts. On the one hand, our ability to make our world thinkable rests on the use of our past
experiences, whereas on the other hand, IT specialists familiarise themselves with yet unknown
conceptual structures through the interaction with the specialist scenery. Specialists' thinkability of
the specialist surroundings is grounded in their perception of similarity which enables them to adapt
both conceptually and linguistically to their specialist practice.

Wittgenstein in Translation Dinda L. Gorlée,2012-04-26 Apart from the Tractatus, Wittgenstein did
not write whole manuscripts, but composed short fragments. The current volume reveals the depths
of Wittgenstein's soul-searching writings - his new philosophy - by concentrating on ordinary language
and using few technical terms. In so doing, Wittgenstein is finally given the accolade of a neglected
figure in the history of semiotics. The volume applies Wittgenstein's methodological tools to the study
of multilingual dialogue in philosophy, linguistics, theology, anthropology and literature. Translation
shows how the translator's signatures are in conflict with personal or stylistic choices in linguistic
form, but also in cultural content. This volume undertakes the impossible task of uncovering the
reasoning of Wittgenstein's translated texts in order to construct, rather than paraphrase, the ideal of
a terminological coherence.

   The Idea of Work in Europe from Antiquity to Modern Times Josef Ehmer,Catharina Lis,2009 Taking a broad chronological approach to the subject, this book provides readers with a cutting-edge overview of research into the varying attitudes towards work and its place in pre-Industrial society. This volume takes a fresh and innovative approach to the history of ideas of work, concerning perceptions, attitudes, cultures and representations of work throughout Antiquity and the medieval and early modern periods. Focusing on developments in Europe, the contributors approach the

subject from a variety of angles, considering aspects of work as described in literature, visual culture, and as perceived in economic theory.

Imaging Beyond the Pinhole Camera Kostas Daniilidis,Reinhard Klette,2006-09-21 This book traces progress in photography since the first pinhole, or camera obscura, architecture. The authors describe innovations such as photogrammetry, and omnidirectional vision for robotic navigation. The text shows how new camera architectures create a need to master related projective geometries for calibration, binocular stereo, static or dynamic scene understanding. Written by leading researchers in the field, this book also explores applications of alternative camera architectures.

Mathematical Principles of the Internet, Two Volume Set Nirdosh Bhatnagar,2019-03-18 This two-

volume set on Mathematical Principles of the Internet provides a comprehensive overview of the mathematical principles of Internet engineering. The books do not aim to provide all of the mathematical foundations upon which the Internet is based. Instead, these cover only a partial panorama and the key principles. Volume 1 explores Internet engineering, while the supporting mathematics is covered in Volume 2. The chapters on mathematics complement those on the engineering episodes, and an effort has been made to make this work succinct, yet self-contained. Elements of information theory, algebraic coding theory, cryptography, Internet traffic, dynamics and control of Internet congestion, and queueing theory are discussed. In addition, stochastic networks, graph-theoretic algorithms, application of game theory to the Internet, Internet economics, data mining and knowledge discovery, and quantum computation, communication, and cryptography are also discussed. In order to study the structure and function of the Internet, only a basic knowledge of number theory, abstract algebra, matrices and determinants, graph theory, geometry, analysis, optimization theory, probability theory, and stochastic processes, is required. These mathematical disciplines are defined and developed in the books to the extent that is needed to develop and justify their application to Internet engineering.
