Integrated Business Information Systems Klaus-Dieter Gronwald,2017-05-30 Enterprise Resource Planning (ERP), Supply Chain Management (SCM), Customer Relationship Management (CRM), Business Intelligence (BI) and Big Data Analytics (BDA) are business related tasks and processes, which are supported by standardized software solutions. The book explains that this requires business oriented thinking and acting from IT specialists and data scientists. It is a good idea to let students experience this directly from the business perspective, for example as executives of a virtual company. The course simulates the stepwise integration of the linked business process chain ERP-SCM-CRM-BI-Big Data of four competing groups of companies. The course participants become board members with full P&L responsibility for business units of one of four beer brewery groups managing supply chains from production to retailer.

Recent Trends in Renewable Energy Sources and Power Conversion R. Seyezhai, S.

Karuppuchamy, L. Ashok Kumar, 2021-07-02 This book presents selected papers from the International Conference on Renewable Energy Systems (ICRES 2020). It throws light over the state of the art of renewable energy sources and their technological advances. Renewable energy sources discussed in this book include solar, wind, biomass, fuel cells, hydropower, hydrogen, nuclear, and geothermal. This book comprehensively explains each of these sources, materials associated, technological development, economics and their impact on the environment. As the renewable energy sources are intermittent, they require specific power electronic converter to convert the generated power into useful form that can be used for utility. Hence, this book describes different forms of power converter such as AC-DC, DC-DC, DC-AC and AC-AC. Advanced power semiconductor devices, their gate drive and protection circuits, heat sink design and magnetic components for power converter are the additional topics included in this book. The topics covered in these proceedings will have a large impact among academicians, researchers, policy makers, scientists, practitioners and students in fields of electronics and electrical engineering, energy engineering, automotive engineering, and so on.

Risk Management Framework James Broad,2013-07-03 The RMF allows an organization to develop an organization-wide risk framework that reduces the resources required to authorize a systems operation. Use of the RMF will help organizations maintain compliance with not only FISMA and OMB requirements but can also be tailored to meet other compliance requirements such as Payment Card Industry (PCI) or Sarbanes Oxley (SOX). With the publishing of NIST SP 800-37 in 2010 and the move of the Intelligence Community and Department of Defense to modified versions of this process, clear implementation guidance is needed to help individuals correctly implement this process. No other publication covers this topic in the detail provided in this book or provides hands-on exercises that will enforce the topics. Examples in the book follow a fictitious organization through the RMF, allowing the reader to follow the development of proper compliance measures. Templates provided in the book allow readers to quickly implement the RMF in their organization. The need for this book continues to expand as government and non-governmental organizations build their security programs around the RMF. The companion website provides access to all of the documents, templates and examples needed to not only understand the RMF but also implement this process in the reader's own organization. A comprehensive case study from initiation to decommission and disposal Detailed explanations of the complete RMF process and its linkage to the SDLC Hands on exercises to reinforce topics Complete linkage of the RMF to all applicable laws, regulations and publications as never seen before

High Performance Liquid Chromatography Heinz Engelhardt,2012-12-06 Modern liquid column chromatography (LC) has developed rapidly since 1969 to become a standard method of separation. If the statisticians are to be believed, the recent growth of LC has been the most spectacular development in analytical chemistry and has not yet abated because its vast potential for application remains to be fully exploited. Significant factors contributing to this continued rise are the simplicity and low cost of the required basic equipment and the relative ease of acquiring and interpreting the data. Unfortunately, in LC, as so often in the field of analytical chemistry, the available commercial instruments are frequently far more complicated - and consequently far more expensive - than is necessary for routine application. Therein also lies the risk of propagating a black box philosophy that would be particularly detrimental to chromatography. Moreover, it appears to have been forgotten, as was done previously with gas chromatography, that inadequate separation by a column can be remedied only with great difficulty, if at all, by electronic means. Also, whether the capillary columns recently advocated with great enthusiasm for LC will fulfill the expectations of their proponents is highly questionable unless someone comes up with some new and revolutionary ideas.
