Foundations of Critical Media and Information Studies Christian Fuchs, 2011-03-01 Foundations of Critical Media and Information Studies lays down foundations for the analysis of media, information, and information technology in 21st century information society, as well as introducing the theoretical and empirical tools necessary for the critical study of media and information. Christian Fuchs shows the role

classical critical theory can play for analyzing the information society and the information economy, as well as analyzing the role of the media and the information economy in economic development, the new imperialism, and the new economic crisis. The book critically discusses transformations of the Internet ('web 2.0'), introduces the notion of alternative media as critical media, and shows the critical role media and information technology can play in contemporary society. This book provides an excellent introduction to the study of media, information technology, and information society, making it a valuable reference tool for both undergraduate and postgraduate students of subjects such as Media Studies, Sociology of Media, Social Theory, and New Media.

Re-thinking Intellectual Property YiJun Tian, 2008-08-20 Copyright laws, along with other Intellectual Property Rights (IPRs), constitute the legal foundation for the global knowledge-based economy and copyright law now plays an increasingly important role in the creation of business fortunes, the access to and dissemination of knowledge, and human development in general. This book examines major problems in the current IPR regime, particularly the copyright regime, in the context of digitization, knowledge economy, and globalization. The book contends that the final goals of IP law and policy-making are to enhance the progress of science and economic development, and the use and even-distribution of intellectual resource at the global level. By referring to major international IP consensus, recent developments in regional IP forums and the successful experiences of various countries, YiJun Tian is able to provide specific theoretical, policy and legislative suggestions for addressing current copyright challenges. The book contends that each nation should strengthen the

coordination of its IP protection and development strategies, adopt a more systematic and heterogeneous approach, and make IP theory, policy, specific legal mechanisms, marketing forces and all other available measures work collectively to deal with digital challenges and in a way that contributes to the establishment of a knowledge equilibrium international society.

Drinking from the Fire Hose Christopher J Frank, Paul Magnone, 2011-09-01 You're sitting in a windowless conference room. Twenty minutes into the meeting the presenter finally makes it to slide four of a thirty two- slide deck. At least you can read this one, unlike the others, which were crammed with numbers, graphs and charts. You look around, wondering if anyone else is following the presentation. Just about everyone these days suffers from information overload the 24/7 explosion from our computers, smartphones, media, colleagues, and customers. Information is essential to making intelligent decisions, but more often than not, it simply overwhelms us. It's like trying to drink from a fire hose. The question isn't how to stop all those e-mails, meetings, conference calls, and fat reports; that's impossible. The question is what to do with them. How do you find the truly essential nuggets of information and use them with confidence? The solution proposed by Christopher Frank and Paul Magnone sounds deceptively simple: Learn how to ask the right questions at the right time. Whatever field you're in, asking smarter questions will expose you to new information, point you to connections between seemingly unrelated facts, and open new avenues of discussion with your

colleagues. The authors explain the seven questions that can help you bring a big- picture perspective to problems that often leave others buried in irrelevant details. And they show through real-life case studies- including Trader Joe's, Starbucks, Kodak, Microsoft, iRobot, and IBM-how their method can have a dramatic impact. It really is possible to convert the fire hose of information into useful insights. Consider a nonbusiness example: the 2010 Icelandic volcano eruption that sent a giant ash cloud toward Europe. Tens of thousands of flights were canceled and five million passengers stranded, leading to billions in economic losses. Europe's best scientists generated oceans of data and carefully modeled the cloud's dispersion pattern. But no one could answer the essential question: Was the concentration of volcanic ash in the air enough to damage a jet engine? Without that key answer, all the carefully gathered facts were useless to the decision makers. Once you adopt the seven questions, you'll start having more productive brainstorming sessions. You'll answer critical questions faster and find unexpected solutions to important problems. And you'll get better at communicating to your colleagues with more clarity and focus, turning down the fire hose that other people have to cope with.
