The Turing Exception William Hertling,2015-03-28 In the year 2043, humans and AI coexist in a precarious balance of power enforced by a rigid

caste reputation system designed to ensure that only those AI who are trustworthy and contribute to human society increase in power. Everything changes when a runaway nanotech event leads to the destruction of Miami. In the grim aftermath, a powerful underground collective known as XOR concludes that AI can no longer coexist with humanity. AI pioneers Catherine Matthews, Leon Tsarev, and Mike Williams believe that mere months are left before XOR starts an extermination war. Can they find a solution before time runs out?

Java Open Source Programming Joseph Walnes,Ara Abrahamian,Mike Cannon-Brookes,Patrick A. Lightbody,2004-02-03 Discover how to develop

full-scale J2EE?TM applications quickly and efficiently using the best Open Source tools Written by leading authorities in the field, this book shows you how to leverage a suite of best-of-breed Open Source development tools to take the pain out of J2EE and build a complete Web-based application. You'll combine these tools to actually reduce the points of failure in your application, while increasing overall system stability and robustness. Along with the tools introduced here, you'll develop the PetSoar application, which follows the PetStore application used by Sun Microsystems to demonstrate features of J2EE. With PetSoar, the authors focus on developing a maintainable and flexible application, rather than showcasing the end result, so that you can apply the material in your own projects. In addition, the authors provide methods for utilizing Open Source software components for each stage of the development process. The Open Source products covered include: * Hibernate to aid with simple,flexible, and speedy transparent object persistence * OpenSymphony WebWork to allow for pluggable view technologies and extensible configuration * JUnit and Mock Objects to assist with rapid and robust unit testing * XDoclet to assist with generating code and configuration files automatically * Jakarta Lucene to add Google-style smart search capabilities to data stores * OpenSymphony SiteMesh to aid in the creation of large sites with a common look and feel * OpenSymphony OSCache to easily cache slow dynamic sections of Web sites resulting in faster-loading pages
