International Commercial Arbitration Gary B. Born, 2014-10-01 The second edition of Gary Born's *International Commercial Arbitration* is an authoritative 4,408 page treatise, in three volumes, providing the most comprehensive commentary and analysis, on all aspects of the international commercial arbitration process, that is available. The first edition of *International Commercial Arbitration* is widely acknowledged as the preeminent commentary in the field. It was awarded the 2011 Certificate of Merit by the American Society of International Law and was voted the International Dispute Resolution Book of the Year by the Oil, Gas, Mining and Infrastructure Dispute Management list serve in 2010. The first edition has been extensively cited in national court decisions and arbitral awards around the world. The treatise comprehensively examines the law and practice of contemporary international commercial arbitration, thoroughly explicating all relevant international conventions, national arbitration statutes and institutional arbitration rules. It focuses on both international instruments (particularly the New York Convention) and national law provisions in all leading jurisdictions (including the UNCITRAL Model Law on International Commercial Arbitration). Practitioners, academics, clients, institutions and other users of international commercial arbitration will find clear and authoritative guidance in this work. The second edition of *International Commercial Arbitration* has been extensively revised, expanded and updated, to include all material legislative, judicial and arbitral authorities in the field of international arbitration prior to January 2014. It also includes expanded treatment of annulment, recognition of awards, counsel ethics, arbitrator independence and impartiality and applicable law. Overview of volumes: Volume I, covering International Arbitration Agreements, provides a comprehensive discussion of international commercial arbitration agreements. It includes chapters dealing

with the legal framework for enforcing international arbitration agreements; the separability presumption; choice of law; formation and validity; nonarbitrability; competence-competence and the allocation of jurisdictional competence; the effects of arbitration agreements; interpretation and non-signatory issues. Volume II, covering International Arbitration Procedures, provides a detailed discussion of international arbitral procedures. It includes chapters dealing with the legal framework for international arbitral proceedings; the selection, challenge and replacement of arbitrators; the rights and duties of international arbitrators; selection of the arbitral seat; arbitration procedures; disclosure and discovery; provisional measures; consolidation, joinder and intervention; choice of substantive law; confidentiality; and legal representation and standards of professional conduct. Volume III, dealing with International Arbitral Awards, provides a detailed discussion of the issues arising from international arbitration awards. It includes chapters covering the form and contents of awards; the correction, interpretation and supplementation of awards; the annulment and confirmation of awards; the recognition and enforcement of arbitral awards; and issues of preclusion, *lis pendens* and *stare decisis*.

Crime Scene Photography Edward M. Robinson, 2016-06-12 *Crime Scene Photography*, Third Edition, covers the general principles and concepts of photography, while also delving into the more practical elements and advanced concepts of forensic photography. Robinson assists the reader in understanding and applying essential concepts in order to create images that are able to withstand challenges in court. This text is a required reading by both the International Association for Identification's Crime Scene Certification Board and the Forensic Photography Certification Board. Includes an instructor website with lecture slides, practical exercises, a test bank, and image collection and many videos which can be used. Extensively illustrated with over 1000 full color photographs, with many images entirely new for the third edition Over 100 practical exercises help the reader grasp the practical applications Variations of correct and incorrect approaches, to be used alongside practical exercises, available online in the Instructor's Manual The chapter on Special Photographic Situations includes new sections on autopsy photography, images from drones, recommendations to photographically document bloodstain patterns and firearms trajectories

The Notion of Award in International Commercial Arbitration Giacomo Marchisio, 2016-04-24 International commercial arbitration relies extensively on the possibility of enforcing arbitral decisions against recalcitrant parties. Because courts and arbitration laws across the world take contrasting approaches to the definition of awards, such enforcement can be problematic, especially in the context of awards by consent, and the recent development known as 'emergency arbitration'. In this timely and ground-breaking book, a young arbitration scholar takes us through the difficulties of defining the notion of arbitral award with a rare combination of theoretical awareness and attention to the procedural requirements of arbitral practice. In a framework using a comparative analysis of common law and civil law jurisdictions (specifically, England and France) and how each has regulated in different ways the equilibria between state justice and arbitral justice – and comparing each with the UNCITRAL Model Law – the book addresses such issues as the following: - the 'judicialization' of arbitration; - different models of arbitral adjudication and their impact on the notion of award; - what an award needs to contain to be enforceable; - awards on competence; - awards by consent; and - awards *ante causam*. The author employs a methodology that views arbitration as providing an institution for administering justice rather than as a purely contractual creature. To this end, rules of arbitral institutions (particularly the International Chamber of Commerce) are examined closely for their implications on what an award means. As a fresh look at the arbitral award by placing it in a broader context than is

usually found, this book allows for a greater understanding of the functioning of international commercial arbitration. It is sure to become an international reference, and as such will be welcomed by arbitrators, practitioners at global law firms, companies doing transnational business, interested academics, and international arbitration centres in emerging markets.

Meander Margaret Wooster, 2021-08-01 Meander tells the story of the Great Lakes region's experiment in restoring a complicated natural system of flowing water. Drawing on her own experience as a watershed planner, teacher, and Great Lakes activist, Margaret Wooster describes the language, history, and failures of many of our water management policies. She then turns to Buffalo Creek to teach us how the Great Lakes work—from a hill made of water to a cut-off oxbow to a buried delta transitioning from two centuries of industrialization. Wooster explores how, on the Niagara Frontier especially, traditional ecological knowledge and Indigenous values were suppressed by colonial rules of settlement. The ecosystem value of physical integrity—or connectivity between upstream and down, surface flow to aquifer, river to land was never fully unpacked. While our management policies often sever them, these connections are key to Buffalo Creek and Great Lakes recovery and resilience. Wooster leaves us with the idea that it is up to us, the people who live along these flows and in their watersheds, to learn as much as we can about these connections and to use our local authorities to make room for rivers and protect our planet's circulatory system for future generations.

Surveying for Engineers John Uren, Bill Price, 2018-03-13 The fifth edition of this classic textbook sets out the essential techniques needed for a solid grounding in the surveying. The popular and trusted textbook covers the traditional topics such as levelling, measurement of angles, measuring distances, and how to carry out traversing and compute coordinates, as well as the latest technological advances. It is packed with clear illustrations, exercises and worked examples, making it both a comprehensive study aid for students and a reliable reference tool for practitioners. This text is aimed at students studying surveying as either part of a civil engineering, building or construction course or as a separate discipline. It is also useful for students who undertake surveying as an elective subject and is a useful resource for practising surveyors. New to this Edition: - The latest developments in Global Navigation Satellite Systems (GNSS) particularly the introduction of network RTK and OS Net and their applications - Recent developments in survey instruments, methods and digital technologies including image processing with total stations and laser planners, developments in data processing and integration and updates on Ordnance Survey mapping products

Airport Passenger Terminal Planning and Design Landrum & Brown,2010 TRB's Airport Cooperative Research Program (ACRP) Report 25, Airport

Passenger Terminal Planning and Design comprises a guidebook, spreadsheet models, and a user's guide in two volumes and a CD-ROM intended to provide guidance in planning and developing airport passenger terminals and to assist users in analyzing common issues related to airport terminal planning and design. Volume 1 of ACRP Report 25 explores the passenger terminal planning process and provides, in a single reference document, the important criteria and requirements needed to help address emerging trends and develop potential solutions for airport passenger terminals. Volume 1 addresses the airside, terminal building, and landside components of the terminal complex. Volume 2 of ACRP Report 25 consists of a CD-ROM containing 11 spreadsheet models, which include practical learning exercises and several airport-specific sample data sets to assist users in determining appropriate model inputs for their situations, and a user's guide to assist the user in the correct use of each model. The models on the CD-ROM include such aspects of terminal planning as design hour determination, gate demand, check-in and passenger and baggage screening, which require complex analyses to support planning decisions. The CD-ROM is also available for download from TRB's website as an ISO image.

Geo-information Mathias Lemmens,2011-08-03 Geomatics, the handling and processing of information and data about the Earth, is one geoscience discipline that has seen major changes in the last decade, as mapping and observation systems become ever more sensitive and sophisticated. This book is a unique and in-depth survey of the field, which has a central role to play in tackling a host of environmental issues faced by society. Covering all three strands of geomatics - applications, information technology and surveying - the chapters cover the history and background of the subject, the technology employed both to collect and disseminate data, and the varied applications to which geomatics can be put, including urban planning, assessment of biodiversity, disaster management and land administration. Relevant professionals, as well as students in a variety of disciplines such as geography and surveying, will find this book required reading. This rapidly developing field uses increasingly complex and accurate systems. Today, technology enables us to capture geo-data in full 3D as well as to disseminate it via the Web at the speed of light. We are able to continuously image the world from space at resolutions of up to 50 cm. Airborne LiDAR (laser surveying) sensors can be combined with digital camera technology to produce geometrically correct images of the Earth's surface, while integrating these with large-scale topographic maps and terrestrial as well as aerial images to produce 3D cityscapes that computer users can explore from their desktops.
