Promotional Screen Industries Paul Grainge, Catherine Johnson, 2015-03-27 From the trailers and promos that surround film and television to the ads and brand videos that are sought out and shared, promotional media have become a central part of contemporary screen life. Promotional Screen Industries is the first book to explore the sector responsible for this thriving area of media production. In a wide-ranging analysis, Paul Grainge and Catherine Johnson explore the intermediaries – advertising agencies, television promotion specialists, movie trailer houses, digital design companies – that compete and collaborate in the fluid, fast-moving world of promotional screen work. Through interview-based fieldwork with companies and practitioners based in the UK, US and China, Promotional Screen Industries encourages us to see promotion as a professional and creative discipline with its own opportunities and challenges. Outlining how shifts in the digital media environment have unsettled the boundaries of ‘promotion’ and ‘content’, the authors provide new insight into the sector, work, strategies and imaginaries of contemporary screen promotion. With case studies on mobile communication, television, film and live events, this timely book offers a compelling examination of the industrial configurations and media forms, such as ads, apps, promos, trailers, digital shorts, branded entertainment and experiential media, that define promotional screen culture at the beginning of the twenty-first century.

Innovation in Global Industries National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Committee on the Competitiveness and Workforce Needs of U.S. Industry, 2008-06-12 The debate over offshoring of production, transfer of technological capabilities, and potential loss of U.S. competitiveness is a long-running one. Prevailing thinking is that the world is flat—that is, innovative capacity is spreading uniformly; as new centers of manufacturing emerge, research and development and new product development follow. Innovation in Global Industries challenges this thinking. The book, a collection of individually authored studies, examines in detail structural changes in the innovation process in 10 service as well as manufacturing industries: personal computers; semiconductors; flat-panel displays; software; lighting; biotechnology; pharmaceuticals; financial services; logistics; and venture capital. There is no doubt that overall there

has been an acceleration in global sourcing of innovation and an emergence of new locations of research capacity and advanced technical skills, but the patterns are highly variable. Many industries and some firms in nearly all industries retain leading-edge capacity in the United States. However, the book concludes that is no reason for complacency about the future outlook. Innovation deserves more emphasis in firm performance measures and more sustained support in public policy. Innovation in Global Industries will be of special interest to business people and government policy makers as well as professors, students, and other researchers of economics, management, international affairs, and political science.

Sustainability in the Textile and Apparel Industries Subramanian Senthilkannan Muthu, Miguel Angel Gardetti, 2020-04-06 This book is part of a five-volume set that explores sustainability in textile industry practices globally. The set will be of interest to researchers, engineers, industrialists, R&D managers and students working in textile chemistry, economics, materials science, and sustainable consumption and production. This volume discusses novel trends and concepts in sustainable textile design, including innovative topics such as doodling and upcycling in clothing and apparel design for sustainable fashion initiatives. Along with strategies for repurposing fashion sustainability, the book also covers university interventions for the development of proper and environmentally friendly design practices. Specific technologies addressed include UV applications, laser treatments for dyeing, refined surface design techniques for products such as leather.

Processing Technologies for the Forest and Biobased Products Industries Marius C. Barbu,Alfred Teischinger,2010 The Deepwater Horizon oil spill in April 2010 has shown us that increasing risks and costs have to be accepted to satisfy the increasing demand of material and energy resources from a worldwide perspective. Increasing the recovery of raw materials is one

possibility, but another one is increasing efficiency in processing and production. Therefore, the development and improvement of processing technologies is a crucial factor for economic progression. This book contains discussions from the 1st International Conference on Processing Technologies for the Forest and Biobased Products Industries, held in October 2010 at Salzburg University of Applied Sciences Kuchl/Austria. The conference provided a forum for discussions among researchers, producers, and consumers of forest and biobased products and acted as a catalyst for new research on process technologies, on quality control and process improvement, and on new concepts for use by technical managers, operations managers, and business managers. The book presents an overview of new developments in processing technologies in the forest and biobased products industries. (Series: Austria: Forschung und Wissenschaft - Technik)
