Knowledge-Based Intelligent Information and Engineering Systems Mircea Gh. Negoita,2004-10-14 We were very pleased to once again extend to the delegates and, we are pleased to th say, our friends the warmest of welcomes to the 8 International Conference on Knowledge-Based Intelligent Information and Engineering Systems at Wellington - stitute of Technology in Wellington, New Zealand. The KES conferences attract a wide range of interest. The broad focus of the c- ference series is the theory and applications of computational intelligence and em- gent technologies. Once purely a research field, intelligent systems have advanced to the point where their abilities have been incorporated into many conventional appli- tion areas. The quest to encapsulate human knowledge and capabilities in domains such as reasoning, problem solving, sensory analysis, and other complex areas has been avidly pursued. This is because it has been demonstrated that these abilities have definite practical applications. The techniques long ago reached the point where they are being exploited to provide commercial advantages for companies and real beneficial effects on profits. KES 2004 provided a valuable mechanism for delegates to obtain a profound view of the latest intelligent systems research into a range of - gorithms, tools and techniques. KES 2004 also gave delegates the chance to come into contact with those applying intelligent systems in diverse commercial areas. The combination of theory and practice represents a uniquely valuable opportunity for - preciating the full spectrum of intelligent-systems activity and the “state of the art”.

X Internet Jessica Keyes,2007-03-02 The executable Internet (X Internet) brings new power and sophistication in delivering services and capabilities to users. The X Internet, both the executable Internet and the extended Internet, fundamentally alters the desktop and Internet landscapes by blurring their distinction both online and off—resulting in a new era of information technology. Authoritative and comprehensive, X Internet: The Executable and Extendable Internet examines this new paradigm from practical and strategic perspectives. It provides a roadmap for building applications that deliver X Internet capabilities. From a strategic angle, it delves into the legal aspects of using and creating this new breed of Internet applications. Discussing computer-human interaction, the book details the development of a rich Internet environment, including graphical design, multimedia, architectures, software development techniques, tools, and information management for X-enriched systems, the components that make up many of the Web 2.0 applications so popular today. It also includes appendices that contain information on a framework for auditing X systems and various guides for using audio and video and building user interfaces. X Internet systems offer almost limitless possibilities for building rich, interactive systems that increase productivity and dramatically enhance the user experience. X Internet: The Executable and Extendable Internet provides a thorough yet accessible understanding of this new Internet that is becoming critical to software development and systems management.

Application of non-intrusive experimental techniques to roughness-induced transition in hypersonic flows Francesco Avallone,2015-04-30 The application of non-intrusive experimental techniques is a break-through in the comprehension of the physical mechanisms governing roughness-induced transition in hypersonic flows. In this thesis, IR Thermography, Planar and Tomographic Particle Image Velocimetry are applied. They show a great potentiality in quantifying the most relevant flow features upstream and downstream of three-dimensional roughness elements. Particularly, non-intrusive measurements of the two-dimensional and three-dimensional velocity flow fields are reported and discussed.

Creating Digital Faces for Law Enforcement Michael W. Streed, 2017-01-25 Today, law enforcement requires actionable and real-time intelligence; 24 hours a day, seven days a week to help respond to cases efficiently. When evidence is lacking in a case, law enforcement officers are often times left to rely on eyewitness descriptions. In order to quickly disseminate facial composites to news outlets and social media, law enforcement needs to rely on every tool available; including traditional forensic artists and advanced facial composite software. Creating Digital Faces for Law Enforcement provides the proper foundation for obtaining key information needed to create effective facial composites. There are two main methods to create a facial composite, first through traditional forensic art techniques and second by using commercially developed facial composite software. Traditional forensic art has advanced from pen and paper to more enhanced digital tools. This text reviews the development of digital tools used by the forensic artist describing each tool in detail. Creating Digital Faces for Law Enforcement is the first text of its kind to address the creation of digital sketches for forensic artists and software-driven sketches for non-artist/technicians. A step-by-step guide addressing the creation of digital, software-driven, sketches for non-artist technicians Includes descriptions supported by both photographs and video demonstrations to assist the reader in better understanding the process Written by an internationally-recognized police sketch artist with over 35 years of experience A companion website page will host author created / narrated videos for reader access

Startup Jerry Kaplan, 2014-07-08 The classic account of the early days of tech, named one of the 10 best business books of the year by Business Week: "Riveting, wry, and often wise."—The Washington Post Jerry Kaplan had a dream: he would redefine the known universe (and get very rich) by creating a new kind of computer. All he needed was sixty million dollars, a few hundred employees, and a maniacal belief in his ability to win the Silicon Valley startup game. Kaplan, a well-known figure in the computer industry, founded GO Corporation in 1987, and for several years it was one of the hottest new ventures in the Valley. Startup tells the story of Kaplan's wild ride: how he assembled a brilliant but fractious team of engineers, software designers, and investors; pioneered the emerging market for hand-held computers operated with a pen instead of a keyboard; and careened from crisis to crisis without ever losing his passion for his revolutionary idea. Along the way, Kaplan vividly recreates his encounters with eccentric employees, risk-addicted venture capitalists, and industry giants such as Bill Gates and John Sculley. And no one—including Kaplan himself—is spared his sharp wit. "What separates Kaplan's tale from other start-up stories is the insight he provides about dealing with two of America's largest computer companies—IBM and Microsoft...Readers interested in entrepreneurial adventurism will find Kaplan's tale entertaining."—Publishers Weekly "Kaplan tells it with novelistic style replete with races against the clock and sharp character sketches...An insider's well-written story of the death of a new machine."—Kirkus Reviews "A winner."—Wired

Near Infrared Detectors Based on Silicon Supersaturated with Transition Metals Daniel Montero Álvarez, 2021-01-08 This thesis makes a significant contribution to the development of cheaper Si-based Infrared

detectors, operating at room temperature. In particular, the work is focused in the integration of the Ti supersaturated Si material into a CMOS Image Sensor route, the technology of choice for imaging nowadays due to its low-cost and high resolution. First, the material is fabricated using ion implantation of Ti atoms at high concentrations. Afterwards, the crystallinity is recovered by means of a pulsed laser process. The material is used to fabricate planar photodiodes, which are later characterized using current-voltage and quantum efficiency measurements. The prototypes showed improved sub-bandgap responsivity up to 0.45 eV at room temperature. The work is further supported by a collaboration with STMicroelectronics, where the supersaturated material was integrated into CMOS-based sensors at industry level. The results show that Ti supersaturated Si is compatible in terms of contamination, process integration and uniformity. The devices showed similar performance to non-implanted devices in the visible region. This fact leaves the door open for further integration of supersaturated materials into CMOS Image Sensors.
