He has consulted with thousands of families, explaining complex data in straightforward terms understandable to the parents. He coined the term shut-down learner to describe children who thrive with hands-on tasks requiring visual and spatial abilities, but who become discouraged by their difficulty mastering core academic skills such as reading and writing. As many as 40% of Americans experience problems with these core skills, and a significant proportion of them are spatial thinkers. This book is packed with techniques that parents can use to help their shut-down learner succeed in school and in life. In a friendly, non-technical style, the author helps them understand their child's characteristics and offers specific approaches to break the downward spiral.
