Recharge Your Library Programs with Pop Culture and Technology: Linda D. Behen,2013-06-17 Learn how to integrate pop culture and technology into school library programs and classrooms, and make today's digital content, mobile devices, and students' changing interests work to the educator's advantage. Today's school libraries need to evolve and meet the needs of 21st-century students—the instruction, programming, and library services must be relevant to today's learners. Additionally, the interactions between educators and the students are what make the critical difference in the students' learning, and turn the library and classroom into places where they will find, assimilate, experience, and understand information. This book provides practical strategies for using pop culture and technology trends to connect with easily distracted middle and high school students and hold their attention. Author Linda D. Behen addresses why school libraries are in transition and why there is a need for dramatic change. She discusses the evolution of all libraries in response to digital content; ubiquitous mobile devices such as smart phones, iPads, and other tablet computers; patrons' changing interests; and the ways in which schools and school libraries have found to effectively adapt to technology changes and student needs. This book is essential for middle and high school librarians and educators, library school students and instructors, and young adult public librarians.

Augmented Images Lars C. Grabbe,Patrick Rupert-Kruse,Norbert M. Schmitz,2022-09-07 Common boundaries between the physical reality and rising digital media technologies are fading. The age of hyper-reality becomes an age of hyper-aesthetics. Immersive media and image technologies - like augmented reality - enable a completely novel form of interaction and corporeal relation to and with the virtual image structures and the different screen technologies. »Augmented Images« contributes to the wide range of the hyper-aesthetic image discourse to connect the concept of dynamic augmented images with the approaches in modern media theory, philosophy, perceptual theory, aesthetics, computer graphics and art theory as well as the complex range of image science. This volume monitors and discusses the relation of images and technological evolution in the context of augmented reality within the perspective of an autonomous image science.

Pop-Up Books Nancy Larson Bluemel,Rhonda Harris Taylor,2012-02-02 A convincing explanation of why interactive or movable books should be included in the library collection that documents their value as motivational instructional tools—in all areas of the school curriculum, across many grade levels. Pop-up books possess universal appeal. Everyone from preschoolers to adults loves to see and tactilely experience the

beautiful three-dimensional work of Robert Sabuda, David A. Carter, and other pop-up book creators. Sabuda himself was inspired to become a pop-up book artist after experiencing the 1972 classic pop-up The Adventures of Super Pickle. The effect of these movable books on young minds is uniquely powerful. Besides riveting children's attention, pop-up books can also help build motor skills, teach cause and effect, and develop spatial understanding of objects. Based on their direct experience and many presentations to teachers and librarians, the authors have provided template lesson plans with curriculum and standards links for using the best pop-up books currently available in the instructional program of the school. The book also includes profiles of the most notable authors, a history of the format, definitions of terms such as flap book and paper engineer, and information on how to create movable books. Librarians will find the section regarding collection development with the format—how and where to acquire them, proper storage methods—and the annotated listing of the authors' 50 favorite pop-ups extremely helpful.

Research on Technology Use in Multicultural Settings Tirupalavanam Ganesh,Anna W. Boriack,Jacqueline R. Stillisano,Trina J. Davis,Hersch C. Waxman,2014-10-01 This book is the third volume in the series on Research in Educational Diversity and Excellence. The goal of this series is to bring issues of diversity and educational risk to the forefront of national attention in order to assist the nation's diverse students at risk of failure to achieve academic excellence. This series focuses on critical issues in the education of linguistic and cultural minority students and those placed at risk by factors of race, poverty, and geographic location. The purpose of the present book is to summarize and discuss recent perspectives, research, and practices related to the use of educational technology in multicultural settings. Technology that is already ubiquitous in our daily lives brings a myriad of issues to the area of education. Although educational systems should be geared to address challenges appropriately, the systems should be designed and developed to provide opportunities to take advantage of technology use. This book is noteworthy in that it presents a variety of theoretical and practical considerations for technology use in diverse multicultural contexts. Consisting of 12 chapters, the book (a) proposes theoretical concerns for understanding technological learning environments today and envisions the potential impact of future technology use and (b) examines technology tools and models that have been used for interventions, programs, and projects and measures and documents specific outcomes and challenges involving complex interactions within low-income and language minority families and students.

Electronic Tagging and Tracking in Marine Fisheries John R. Sibert,Jennifer L. Nielsen,2013-03-09 Reviews: Methods and Technology in Fish Biology and Fisheries published by Kluwer Academic Publishers is a book series dedicated to the publication of information on advanced, forward-looking methodologies, technologies, or perspectives in fish and is especially dedicated to relevant topics addressing global, fisheries. This series international concern in fish and fisheries. Humans continue to challenge our environments with new technologies and technological applications. The dynamic creativity of our own species often tends to place the greatest burden on our supporting ecosystems. This is especially true for aquatic networks of creeks, lakes, rivers and ocean environments. We also frequently use our conceptual powers to balance conflicting requirements and demands on nature and continue to develop new approaches and tools to provide sustainable resources as well as conserve what we hold most dear on local and global scales. This book series will provide a window into the developing dynamic among humans, aquatic ecosystems (both freshwater and marine), and the organisms that inhabit aquatic environments. There are many reasons to doubt the increasing social and economic value technology has gained over the last two centuries. Science and technology represent stages in human development. I agree with Ernst Mayer when he said in Toward a New Philosophy of Biology (1988) that endeavors to solve all scientific problems by pure logic and refined measurements are unproductive, if not totally irrelevant.
