The Unfinished Mechanics of Giuseppe Moletti Walter R.

Laird, 2000-12-15 Mechanics has long been recognized as the pivotal science in the decline of Aristotelian natural philosophy and the rise of the new, mathematical physics of the Scientific Revolution. Less well known, however, is the earlier transformation of mechanics from a practical art into a theoretical and mathematical science. This transformation was occasioned by the recovery of the pseudo-Aristotelian Mechanical Problems and its assimilation in the course of the sixteenth century to the Aristotelian model of the subalternate or middle sciences, which deal with natural subject matter but draw their principles from geometry or arithmetic. In his *Dialogue on Mechanics*, Giuseppe Moletti made the most explicit and thoroughgoing attempt to determine the geometrical principles of Aristotelian mechanics, to establish its Euclidean foundations, and so to realize in fact the subalternation of mechanics to geometry. Having done this in the First Day, he then set out in the Second to extend mechanics generally to explain all motions through the analysis of their forces and resistances. In the process he anticipated Galileo in asserting that all heavy bodies, whatever their weights, fall with equal speeds, and he realized that the same resistance that makes a body hard to move also makes it hard to stop – which is almost the law of inertia. Written in dialogue form in Italian (rather than in Latin) for a courtly and practical audience, the *Dialogue* was left unfinished when Moletti quit the Gonzaga court at Mantua to take up the mathematics chair at the University of Padua. Never before published except for brief extracts, the full Italian text is edited from the manuscripts and printed here for the first time, together with a facing-page English translation. The extensive notes that accompany

the text cite and quote from a number of Moletti's other, mostly unpublished, works and his numerous sources. In his introduction, W.R. Laird sets the Dialogue within the historical background of medieval and Renaissance mechanics, sketches the life and works of Moletti, and analyses the arguments and the geometrical theorems of the Dialogue. The Unfinished Mechanics of Giuseppe Moletti offers an unprecedented look at the transformation of Aristotelian mechanics into a mathematical science in the generation before Galileo.

Apple Pressings: Squeezing Potent Truths from Sweet Bits of Knowledge Charles Ebeling, 2019-07-04 These 15 essays are filled with the products of a curious mind, set loose with the time and means to explore anything of interest. They were written under the auspices of the Chicago Literary Club, one of the oldest and most regarded institutions of its kind, and presented, one per year between 2005 and 2019 by the author. The topics range from an exploration of the role of the humble French Fry in global history and culture, to a tour through the Masai Valley of Kenya to explore the fate of giant animals in a modernizing world, to an introduction to Samuel Johnson, one of the most articulate and revered Englishmen of all time and his sidekick and naughty biographer James Boswell, to a dive into the history and future of the Electoral College and all its faults, to the

story of a long relationship with one of the men who created McDonald's, Dick McDonald. The essays continue with a profile of how Toyota surpassed Volkswagen as America's top import and the role of the author in building Toyota's brand recognition, followed by the story of a short but profound tour of duty in the Vietnam of 1968, to more about Bozzy, to the fascinating story behind the use of colors in politics through time, to the obscure story behind the 1.5 billion candle-power beacon that one brought planes into Chicago. The essays go on with the real story of the French Fry and its birth in the Meuse Valley of Belgium, to a look behind the doors and later open-spaces that define the offices of our times, to the truth behind spokesmanship, both commercial and political, and winding up with a rollicking recollection of the public relations business and the author's role in it in the Chicago of the 1970's. Each essay is preceded with a backstory on how and why Chuck engaged that topic. All in all, Apple Pressings is a biography of our times, and a time worth reliving.

Authors from a variety of disciplines discuss practices mediated through mobile communication, including current phone and tablet devices. The converging concepts of Materialities (ranging from the political economy of communication to physical devices) and Imaginaries (including cultural values, desires and perceptions) are touchstones for each of the chapters in the book.

Ventura,2022-08-03 Promoting Responsive Feeding During Breastfeeding, Bottle-Feeding, and the Introduction to Solid Foods addresses how caregiver feeding practices and styles shape the quality and outcome of feeding interactions during infancy. The book also considers the potential influence of broader contextual factors on early feeding interactions, including how psychological, social, cultural and economic factors may influence caregivers' abilities to implement feeding recommendations. Highlights the importance of responsive, or infant-led feeding practices and styles Promotes high-quality caregiver-infant interactions during breastfeeding, bottle-feeding and the introduction to solid foods Discusses the socioemotional and cognitive benefits of high-quality feeding interactions

Instruments and Related Concepts at the Syntax-Semantics

Interface Koen Van Hooste, 2018-04-30 Instruments constitute a classic member of the thematic role inventory, yet they are usually analyzed only peripherally, taking a back seat to the more studied members such as Agent and Patient. This dissertation investigates the semantic reality behind the label instrument from the functionalist perspective of Role & Reference Grammar. Starting from a theoretical investigation of what instrumentality truly means when contrasted with related concepts like comitatives, this book explores the morphosyntactic realization of instruments across a wide range of typologically diverse languages. Apart from the standard occurrences of instruments that come to mind from languages such as Latin, German or English, this book delves into several less common constructions that feature the instrument relation. Such constructions include, amongst others, passives with instruments and particularly

the Instrument-Subject Alternation, a construction where the instrument seemingly appears as the subject of the sentence. This construction displays variation along three dimensions: 1) The instrument can vary from a very simple tool to a complicated machine, 2) the predicate can vary substantially and 3) languages differ widely with respect to the construction's acceptability. This makes for a complex playing field where the animacy of the instrument but also the aktionsart class of the predicate play a major role. The last section of this book deals with linking the semantics of instruments and related concepts to their morphosyntactic realizations, including the various encoding strategies that are available in any given language. This book also features a concise introduction to Role & Reference Grammar. *Dissertations in Language and Cognition*: This series explores issues of mental representation, linguistic structure and representation, and their interplay. The research presented in this series is grounded in the idea explored in the Collaborative Research Center 'The structure of representations in language, cognition and science' (SFB 991) that there is a universal format for the representation of linguistic and cognitive concepts.
