Open Source Development, Adoption and Innovation Joseph Feller, Brian Fitzgerald, Walt Scacchi, Alberto Sillitti, 2007-08-10 Open source software has emerged as a major field of scientific inquiry across a number of disciplines. When the concept of open source began to gain mindshare in the global business community, decision makers faced a challenge: to convert hype and potential into sustainable profit and viable business models. This volume addresses this challenge through presenting some of the newest, extensively peer-reviewed research in the area.

Community Benefits Jovanna Rosen, 2023-05-16 In *Community Benefits*, Jovanna P. Rosen explores a new pattern in urban development: local residents and community representatives leveraging large-scale development projects for agreements that promise dedicated local benefits, such as parks and jobs. In general, such development projects have not produced impactful benefits for local residents, and often have contributed to significant community harm, including gentrification and displacement. In response, community activists have launched a fight to control development, using benefits-sharing agreements to ensure that projects produced better outcomes for local residents. While such agreements now exist across the nation, the process of negotiating and enforcing them remains challenging. This book dives deep into four case studies--in Los Angeles, Atlanta, Seattle, and Milwaukee--to answer the following questions: Who ultimately benefits from both the agreements and the projects in question? How do benefits get delivered, and who controls this process? What works for these agreements to successfully produce community outcomes? Rosen shows that, without agreements that promote accountability, developers and other project proponents can walk away from the negotiating table once the agreement is signed and the development moves forward. This disregard for community benefits and priorities can leave community residents solely responsible for benefits delivery during implementation, but with few viable avenues to ensure that outcomes materialize. The cases reveal specific elements that agreements require to achieve success during implementation: community participation, managerial connections, effective partnerships, responsiveness, and vigorous oversight with accountability mechanisms. Although creating these conditions is difficult, sometimes impossible, and contingent on fragile processes, Rosen concludes the book with recommendations for both the agreement negotiation and implementation phases to ensure success.

Emerging Urbanity Richard Marshall, 2013-09-05 Discussions on the global economy focus on the hyper-mobility of capital, the possibility of instantaneous transmission of information and money around the globe, the centrality of information outputs to our economic systems and emphasise the neutralisation of geography and of places. What is ignored, however, is that even the most advanced information industries need a material infrastructure of buildings and work processes, and considerable agglomeration, in order to operate in global markets. Further, the globalisation of economic activity has brought with it not only a vast dispersal of offices and factories, but also a growing importance of central functions to manage and coordinate such worldwide networks of activities. The development of global urban projects is one manifestation of this move towards centrality in urban situations. These large-scale urban projects are the result of governments' seeking competitive advantage in the global economy. They are critical components of a nation's global infrastructure. In the booming economies of the Asia Pacific Rim prior to the Asian Economic Crisis these urban developments were seen as key components of national economic policies. In their making they require a conscious effort to arrange material infrastructure and reinforce that there is a role for urban design in this making. *Emerging Urbanity* is an exploration of this role in nine global urban projects in the Asia Pacific Rim.

The City Builders Susan S. Valuing forest ecosystem services: a training manual for planners and project developers Food and Agriculture Organization of the United Nations, 2019-02-28 The degradation of ecosystems, including forests, and the associated loss of biodiversity, particularly due to human-induced threats and climate change, has gained increased attention from scientists and policymakers. The Millennium Ecosystem Assessment presented a new conceptual framework that puts ecosystem services at the centre and links human well-being to the impacts on ecosystems of changes in natural resources. The Economics of Ecosystems and Biodiversity initiative drew further attention to the economic benefits of conserving ecosystems and biodiversity, supporting the idea that economic instruments – if appropriately applied, developed and interpreted – can inform policy- and decision-making processes. Only a few ecosystem services, however, have explicit market value and are traded in open markets: many – especially those categorized as having “passive-use” value – remain invisible and are rarely accounted for in traditional economic systems. The failure to appropriately consider the full economic value of ecosystem services in decision making enables the continued degradation and loss of ecosystems and biodiversity. Most ecosystem services are considered public goods and tend to be overexploited by society. Many methods have been applied to the economic valuation of ecosystem services. The use of these methods, as well as the interpretation of their results, requires familiarity with the ecological, political, normative and socio-economic context and the science of economics. Recognizing, demonstrating and capturing the value of ecosystem services can play an important role in setting policy directions for ecosystem management and conservation and thus in increasing the provision of ecosystem services and their contributions to human well-being. The aim of this manual is to enhance understanding of ecosystem services and their valuation. The specific target group comprises governmental officers in planning units and field-level officers and practitioners in key government departments in Bangladesh responsible for project development, including the Ministry of Environment and Forests and its agencies. Most of the examples and case studies presented herein, therefore, are tailored to the Bangladesh context, but the general concepts, approaches and methods can be applied to a broad spectrum of situations. This manual focuses on valuing forest-related ecosystem services, including those provided by trees outside forests. It is expected to improve valuation efforts and help ensure the better use of such values in policymaking and decision making. Among other things, the manual explores the basics of financial mathematics (e.g. the time value of money; discounting; cost-benefit analysis; and profitability and risk indicators); the main methods of economic valuation; examples of the valuation of selected ecosystem services; and inputs for considering values in decision making.

Firm-Sponsored Developers in Open Source Software Projects Dirk Homscheid, 2020-10-21 This research aims at synthesizing literature on social capital theory and OSS communities to arrive at a conceptual model of social capital and individuals' value creation in OSS communities. Accordingly, it targets at replicating prior research that used social capital to predict diverse forms of outcome by using alternative operationalizations of the different social capital dimensions as well as forms of outcome and includes firm-sponsorship as moderator into the models. As a result of this research, it can be noted that the proven relationship between an OSS contributor's social capital

and his created value is affected by firm-sponsorship. Furthermore, it could be shown that the proven relationship between an OSS contributor's social capital and associated individual outcomes is not affected by firm-sponsorship.

Road User and Mitigation Costs in Highway Pavement Projects David Leonard Lewis,1999 This synthesis report will be of interest to transportation agency planners; design, construction, and maintenance engineers; and administrators, managers, economists, and other decisionmakers involved in programming highway pavement projects. This synthesis describes current practice with regard to road user and mitigation costs in highway pavement projects. Information for the synthesis was collected by surveying U.S. and Canadian transportation agencies and by conducting a literature search of both domestic and foreign publications. This report of the Transportation Research Board provides detailed information on the various methods employed by transportation agencies to estimate user costs. The advantages and disadvantages of each are reported. Information on the various components of user costs (that is, time related, vehicle operating, safety, and environmental costs) is also included. In addition, the study reports on the various mitigation strategies available to agencies to reduce user costs. Information is also provided on how user costs and mitigation strategies have been applied to evaluate different alternatives; and how uncertainties, political considerations, and quality control contribute to the decisionmaking process.
