Protea Lewis J. Matthews, 2016-06-30 The proteas (Proteaceae) are a large and ancient plant family of Gondwana origins with an impressive diversity of flower and form, and an intriguing distribution pattern throughout mainly the Southern Hemisphere. In his spectacular photography, Lewis J. Matthews captures the exceptional beauty and unique characteristics of a broad range of cultivated species and cultivars--some are well known, while others are either new introductions or lesser-known examples that deserve wider cultivation. For inclusion in *Protea*, Matthews has chosen a comprehensive selection of the best species and varieties, including a large number not previously seen in print. They are certain to inspire readers to grow them in their gardens where climate and soils are suitable. After *The Protea Book* by Matthews was published in 2002, numerous outstanding hybrids were introduced; many with exquisite blooms that are very dramatic. The stunning hybrid leucospermums ("Pins"), bred at the University of Hawai'i Research Station on Maui, are a prime example of the successful work being carried out by plant breeders. In this latest book, a multitude of related species and new varieties are described and illustrated: • from the giant king protea of South Africa to the spidery grevilleas of Australia; • from the delicious macadamia nut of Queensland to the unusual New Zealand rewarewa (*Knightia*); • from the richly colored New South Wales waratah (*Telopea*) to the dainty blushing bride (*Serruria*) of South Africa's Cape; • from the beautiful South American *Lomatia ferruginea* to subtly colored Australian examples. In climates unsuitable for growing proteaceous plants, the flowers are often imported and featured in exotic, long-lasting floral arrangements. Even gardeners who are unable to cultivate these extraordinary plants will be fascinated by their incredible variation of form and color. Whether for the home gardener, commercial flower grower, or nursery professional, this lavishly illustrated volume is a valuable reference tool, providing a fresh look at the world of proteas. Chapters include advice on growing requirements, propagation, uses in garden situations, which ones attract birds, cut-flower production--all facets of protea are covered in this truly extensive guide. 366 color illustrations A Latitude 20 Book published by University of Hawai'i Press

Protein Crystallography in Drug Discovery Robert E. Babine, Sherin S. Abdel-Meguid, 2008-07-15 The rational, structure-based approach has become standard in present-day drug design. As a consequence, the availability of high-resolution structures of target proteins is more often than not the basis for an entire drug development program. Protein structures suited for rational drug design are almost exclusively derived from crystallographic studies, and drug developers are relying heavily on the power of this method. Here, researchers from leading pharmaceutical companies present valuable first-hand information, much of it published for the first time. They discuss strategies to derive high-resolution structures for such important target protein classes as kinases or proteases, as well as selected examples of successful protein crystallographic studies. A special section on recent methodological developments, such as for high-throughput crystallography and microcrystallization, is also included. A valuable companion for crystallographers involved in protein structure determination as well as drug developers pursuing the structure-based approach for use in their daily work.

Habitat Suitability and Distribution Models Antoine Guisan, Wilfried Thuiller, Niklaus E. Zimmermann, 2017-09-14 This book introduces the key stages of niche-based habitat suitability model building, evaluation and prediction required for understanding and predicting future patterns of species and biodiversity. Beginning with the main theory behind ecological niches and species distributions, the book proceeds through all major steps of model building, from conceptualization and model training to model evaluation and spatio-temporal predictions. Extensive examples using R support graduate students and researchers in quantifying ecological niches and predicting species distributions with their own data, and help to address key environmental and conservation problems. Reflecting this highly active field of research, the book incorporates the latest developments from informatics and statistics, as well as using data from remote sources such as satellite imagery. A website at www.unil.ch/hsdm contains the codes and supporting material required to run the examples and teach courses.
