Foundations of Modern Statistics Denis Belomestny, Cristina Butucea, Enno Mammen, Eric Moulines, Markus Reiß, Vladimir V. Ulyanov, 2023-07-16 This book contains contributions from the participants of the international conference "Foundations of Modern Statistics" which took place at Weierstrass Institute for Applied Analysis and Stochastics (WIAS), Berlin, during November 6-8, 2019, and at Higher School of Economics (HSE University), Moscow, during November 30, 2019. The events were organized in honor of Professor Vladimir Spokoiny on the occasion of his 60th birthday. Vladimir Spokoiny has pioneered the field of adaptive statistical inference and contributed to a variety of its applications. His more than 30 years of research in the field of mathematical statistics had a great influence on the development of the mathematical theory of statistics to its present state. It has inspired many young researchers to start their research in this exciting field of mathematics. The papers contained in this book reflect the broad field of interests of Vladimir Spokoiny: optimal rates and non-asymptotic bounds in nonparametrics, Bayes approaches from a frequentist point of view, optimization, signal processing, and statistical theory motivated by models in applied fields. Materials prepared by famous scientists contain original scientific results, which makes the publication valuable for researchers working in these fields. The book concludes by a conversation of Vladimir Spokoiny with Markus Reiß and Enno Mammen. This interview gives some background on the life of Vladimir Spokoiny and his many scientific interests and motivations.

Supporting Families and Carers Mary E. Braine, Julie Wray, 2018-09-03 Understanding the perspective of carers is an essential aspect of nursing. Supporting Families and Carers: A Nursing Perspective offers insights into the fundamental principles of caring for families and carers irrespective of age, gender, ethnicity, sexuality or religion. This book discusses the concepts and theories that underpin our understanding of the behaviours and feelings that families and caregivers may experience. While the book covers theoretical dimensions to understand the caregiving experience, it also provides practical perspectives for nursing and is a unique resource to inform nursing practice and learning at all levels. The book covers topics such as the stress process, stressors and how they relate to caregiving as well as actions and resources to help alter stressful situations. Interventions discussed include training and education programs, problem-solving skills, information technology-based support and formal approaches to planning care that take into account the specific needs of carers. Carers are a central aspect of contemporary health services, and working with carers is fundamental to the delivery of high-quality person- and family-centred nursing care. This invaluable resource helps nurses to work effectively in partnership with patients and their carers.

A Nurse's Survival Guide to General Practice Nursing E-Book Karen Storey, Rhian Last, 2021-06-02 General practice nurses are faced with the daily challenge of keeping up-to-date with a vast range of conditions and their management. They also need to be familiar with evidence-based practice to inform high-level decision making. This book will complement those programmes and provide essential information to assist nurses new to general practice. For experienced nurses working in general practice there are essential chapters covering the latest developments such as leadership, quality improvement, PCN developments and essential clinical knowledge that highlight the changes in clinical care in recent years, plus an acknowledgement of the impact the COVID 19 pandemic has had on management of care. This is an indispensable handbook for: Defining the essential knowledge for meeting continuing professional development requirements Understanding fundamental clinical skills to ensure best practice Exploring new ways of working to consult and communicate with patients Investigating ways to improve care delivery Handy format makes for easy reference Clear, bulleted content puts the emphasis on quick reference Reflective activities Diagrams clearly explain difficult concepts Case studies highlight best practice

Interactive Multimedia and Next Generation Networks Vincent Roca, Franck Rousseau, 2004-10-26 Interactive Distributed Multimedia Systems (IDMS) and Protocols for Mul- media Systems (PROMS) have been two successful series of international events bringing together researchers, developers and practitioners from academia and industry in all areas of multimedia systems. These two workshops successfully merged in 2003 and now constitute the MIPS workshop. After the outstanding MIPS 2003 workshop, organized in Naples, Italy, by GiorgioVentreandRobertoCanonico, fromtheUniversityofNaplesFedericoII, MIPS2004movedtoGrenoble, France. Followingthegreattradition, MIPS2004 was intended to contribute to scienti?c, strategic and practical advances in the area of distributed multimedia applications, protocols and intelligent mana- ment tools, with emphasis on their provision over novel network architectures. This is undoubtedly a rather broad area, which is con?rmed by the large range of topics that were addressed in the submitted (and accepted) papers. This year the Call for Papers attracted 74 submissions, essentially from - rope and Asia, plus a few contributions from North America, the Middle East, and Africa, for a total of 20 countries. We would like to express our warmest gratitude to all the authors, without whom organizing this event would have been impossible! Thanks to the outstanding work of the Program Committee and the ad- tional reviewers, 20 full-sized papers and 5 additional short papers were ?nally accepted, which was not an easy task. Like MIPS 2003, MIPS 2004 remained a highly selective event (33% acceptance ratio, including the short papers) which is the best warrant of a good program quality.

Gravity Models of Spatial Interaction Behavior Ashish Sen, Tony E. Smith, 2012-12-06 Gravity models describe, and hence help predict, spatial flows of commuters, air-travelers, migrants, commodities and even messages. They are one of the oldest and most widely used of all social science models. This book presents an up-to-date, consistent and unified approach to the theory, methods and application of the gravity model - which spans from the axiomatic foundations of such models all the way to practical hints for their use. I have found no better general method for use in applied research dealing with spatial interaction... It is against this background that the present book by Sen and Smith is most welcomed. Fluid-Structure Interaction and Biomedical Applications Tomáš Bodnár, Giovanni P. Galdi, Šárka Nečasová, 2014-10-13 This book presents, in a methodical way, updated and comprehensive descriptions and analyses of some of the most relevant problems in the context of fluid-structure interaction (FSI). Generally speaking, FSI is among the most popular and intriguing problems in applied sciences and includes industrial as well as biological applications. Various fundamental aspects of FSI are addressed from different perspectives, with a focus on biomedical applications. More specifically, the book presents a mathematical analysis of basic questions like the well-posedness of the relevant initial and boundary value problems, as well as the modeling and the numerical simulation of a number of fundamental phenomena related to human biology. These latter research topics include blood flow in arteries and veins, blood coagulation and speech modeling. We believe that the variety of the topics discussed, along with the different approaches used to address and solve the corresponding problems, will help readers to develop a more holistic view of the latest findings on the subject, and of the relevant open questions. For the same reason we expect the book to become a trusted companion for researchers from diverse disciplines, such as mathematics, physics, mathematical biology, bioengineering and medicine.

Investigations of After Cavity Interaction in Gyrotrons Including the Effect of Non-uniform Magnetic Field Roy Choudhury, Amitavo, 2014-02-05

Integration of Renewables in Power Systems by Multi-Energy System Interaction Birgitte Bak-Jensen, Jayakrishnan Radhakrishna Pillai, 2021-04-12 This book focuses on the interaction between different energy vectors, that is, between electrical, thermal, gas, and transportation systems, with the purpose of optimizing the planning and operation of future energy systems. More and more renewable energy is integrated into the electrical system, and to optimize its usage and ensure that its full production can be hosted and utilized, the power system has to be controlled in a more flexible manner. In order not to overload the electrical distribution grids, the new large loads have to be controlled using demand response, perchance through a hierarchical control set-up where some controls are dependent on price signals from the spot and balancing markets. In addition, by performing local real-time control and coordination based on local voltage or system frequency measurements, the grid hosting limits are not violated.

Chris Crawford on Interactive Storytelling Chris Crawford,2004-10-06 As a game designer or new media storyteller, you know that the story is everything. However, figuring out how to tell it interactively-and in a way that keeps your audience coming back for more-can be challenging. Here to help you out (and to open your mind to ever more creative ways of producing those stories) is the man who created the cult publication The Art of Computer Game Design and who has devoted much of his career to that very topic: Chris Crawford. To highlight the path for future gains in the quest for a truly interactive story, Chris provides a solid sampling of what doesn't work, contrasting unsuccessful methodologies with those that hold promise for the future. Throughout you'll find examples of contemporary games that rely on different technologies-and learn the storytelling lessons

to be garnered from each of the past methodologies. Within the context of interactive storytelling, Chris explores ways of providing conflict and challenge, the difference between low- and high-interactivity designs, the necessity to move beyond purely visual thinking (so that the player is engaged on multiple levels), and more.
