Health Tech Trond Arne Undheim,2021-11-09 Health Tech: Rebooting Society's Software, Hardware and Mindset fulfills the need for actionable insight on what's truly driving change and how to become a changemaker, not just affected by it. The book introduces anybody who wishes to understand how global healthcare will change in the next decade to the key technologies, social dynamics, and systemic shifts that are shaping the future. Healthcare futurist, investor, and entrepreneur Trond Arne Undheim describes the complex history of public health, why it's so complicated and what the major challenges are right now. He includes a discussion of COVID, why it happened, the cultural factors that have slowed down traditional public health measures, and how innovation can help. He also discusses what is happening in health systems around the world as a result of the pandemic. The book explores certain health tech measures, tools (basic medical devices gradually being upgraded and digitally enhanced), processes, and innovations that are already working well along with others that are in their infancy, such as AI, wearables, robotics, sensors, and digital therapeutics. The book describes the movers and shakers in the healthcare system of the future, from startups to patient and service providers, as well as the health challenges of our time, including pandemics, aging, preventive healthcare, and much more. The book concludes with a look at how health tech may bring about the biggest opportunity to transform healthcare for decades to come.

The Economics of New Health Technologies Joan Costa-Font,Christophe Courbage,Alistair McGuire,2009-05-14 Technological change in healthcare has led to huge improvements in health services and the health status of populations. Although offering remarkable benefits, these changes often entail significant financial, physical and social risks. This book analyses the impact of advances in medical technology from an economic perspective.

Health, Technology and Society Andrew Webster,2017-09-16 Examines a range of current innovative health technologies, exploring how far they change the boundaries between the body, health, technology relationship, and assessing the contribution a critical social science can make towards our understanding of this shift.

Tools for Evaluating Health Technologies ,1995 This volume contains five background papers describing in greater detail some of the research techniques discussed in the report Identifying health technologies that work: searching for evidence.

The Problem of Health Technology Pascale Lehoux,2014-06-03 Health technology is a pivotal locus of change and controversy in health care systems, and The Problem of Health Technology offers a comprehensive and novel analysis of the topic. The book illuminates the scientific and policy arguments that are currently deployed in industrialized countries by addressing the perspectives of clinicians, health care managers, scholars, policymakers, patients, and industry. And by establishing a dialogue between two interdisciplinary fields--Health Technology Assessment and Science and Technology Studies--Pascale Lehoux argues for re-centering the debate around social and political questions rather than questions of affordability, thereby developing an alternative framework for thinking about the implications of health technology.

Digital Health Technology for Better Aging Giuseppe Andreoni,Cinzia Mambretti,2021-08-01 This book describes the multidisciplinary approach needed to tackle better aging. Aging populations are one of the 21st century's biggest challenges. National health systems are forced to adapt in order to provide adequate and affordable care. Innovation, driven by digital technology, is a key to improving quality of life and encouraging healthy living. Well-designed technology keeps people empowered, independent, and mobile; however, despite widespread adoption of ICT in day-to-day life, digital health technologies have yet to catch on. To this end, technology needs to be effective, usable, cheap, and designed to ensure the security of the managed data. In the era of mHealth, mobile technology, and social design, this book describes, in six sections, the collaboration of polytechnic know-how and social science and health sectors in the creation of a system for encouraging people to engage in healthy behavior and achieve a better quality of life.

Cost Effectiveness Modelling for Health Technology Assessment Richard Edlin,Christopher McCabe,Claire Hulme,Peter Hall,Judy Wright,2015-08-11 This book provides an introduction to decision analytic cost-effectiveness modelling, giving the theoretical and practical knowledge required to design and implement analyses that meet the methodological standards of health technology assessment organisations. The book guides you through building a decision tree and Markov model and, importantly, shows how the results of cost-effectiveness analyses are interpreted. Given the complex nature of cost-effectiveness modelling and the often unfamiliar language that runs alongside it, we wanted to make this book as accessible as possible whilst still providing a comprehensive, in-depth, practical guide that reflects the state of the art - that includes the most recent developments in cost-effectiveness modelling. Although the nature of cost effectiveness modelling means that some parts are inevitably quite technical, across the 13 chapters we have broken down explanations of theory and methods into bite-sized pieces that you can work through at your own pace; we have provided explanations of terms and methods as we use them. Importantly, the exercises and online workbooks allow you to test your skills and understanding as you go along.

Facilitating Daily Life Integration of Technologies for Active and Healthy Aging Daryoush Daniel Vaziri,2018-07-09 Daryoush Daniel Vaziri illustrates that the use of mixed methods designs may support the induction of more subtle and complete theories about older adults' use of technologies for the support of active and healthy aging. The results show that older adults' social contexts and environments considerably affect their perspectives, practices and attitudes with respect to health, quality of life, well-being and technology use for active and healthy aging support. Results were collected with older adults aged 60+ as well as relevant secondary stakeholders like caregivers, policy makers or health insurance companies.

Strategic Health Technology Incorporation Binseng Wang,2022-06-01 Technology is essential to the delivery of health care but it is still only a tool that needs to be deployed wisely to ensure beneficial outcomes at reasonable costs. Among various categories of health technology, medical equipment has the unique distinction of requiring both high initial investments and costly maintenance during its entire useful life. This characteristic does not, however, imply that medical equipment is more costly than other categories, provided that it is managed properly. The foundation of a sound technology management process is the planning and acquisition of equipment, collectively called technology incorporation. This lecture presents a rational, strategic process

for technology incorporation based on experience, some successful and many unsuccessful, accumulated in industrialized and developing countries over the last three decades. The planning step is focused on establishing a Technology Incorporation Plan (TIP) using data collected from an audit of existing technology, evaluating needs, impacts, costs, and benefits, and consolidating the information collected for decision making. The acquisition step implements TIP by selecting equipment based on technical, regulatory, financial, and supplier considerations, and procuring it using one of the multiple forms of purchasing or agreements with suppliers. This incorporation process is generic enough to be used, with suitable adaptations, for a wide variety of health organizations with different sizes and acuity levels, ranging from health clinics to community hospitals to major teaching hospitals and even to entire health systems. Such a broadly applicable process is possible because it is based on a conceptual framework composed of in-depth analysis of the basic principles that govern each stage of technology lifecycle. Using this incorporation process, successful TIPs have been created and implemented, thereby contributing to the improvement of healthcare services and limiting the associated expenses. Health Technology Assessment and Health Policy Today: A Multifaceted View of their Unstable Crossroads Juan E. del Llano-Señarís, Carlos Campillo-Artero, 2015-01-08 This book disentangles the issues in connection with the advancement of Health Technology Assessment (HTA) and its interface with health policy. It highlights the factors that should shape its progress in the near future. Interdisciplinary and critical views from a number of professionals are put together in a prescient order to cast some light and make recommendations as to the next steps HTA should take to be fit for purpose. A wealth of documents dealing with HTA have been published over the last three decades. HTA allegedly is one of the bedrocks of regulation and medical decision making. However, counter vailing visions contend that geographical variations in the role that HTA is actually playing within countries pinpoints specific room for improvement. Given our social preferences, cherry-picking HTA's features and successes over the last decades moves it away from its possibility frontier. Some of the most noteworthy hindrances that HTA faces, in several countries, to making headway towards its consolidation as an efficient tool for regulation and decision making are as follows: insufficient resources, delays in assessment, inadequate priority setting, regulatory capture, public distrust, actual influence on regulatory decisions, the need for strengthening international cooperation and harmony, the lack of sound and consistent assessments of diagnostic tests, medical devices and surgical innovations and limited dissemination. Time has come for HTA to take a renewed stand. There is a pressing need to submit HTA to in-depth critical scrutiny.

Health Technology Development and Use Sampsa Hyysalo, 2010-06-22 How do development and use of new technology relate? How can users contribute to innovation? This volume is the first to study these questions by following particular technologies over several product launches in detail. It examines the emergence of inventive ideas about future technology and uses, how these are developed into products and embedded in health care practices, and how the form and impact of these technologies then evolves through several rounds of design and deployment across different types of organizations. Examining these processes through three case studies of health care innovations, these studies reveal a blind spot in extant research on development-use relations. The majority of studies have examined shorter 'episodes': moments within particular design projects, implementation processes, usability evaluations, and human-machine interactions. Studies with longer time-frames have resorted to a relatively coarse 'grain-size' of analysis and hence lost sight of how the interchange is actually done. As a result there are no social science, information systems, or management texts which comprehensively or adequately address: • how different moments, sites and modes of shaping new technology determine the evolution of new technology; • the detailed mechanisms of learning, interaction, and domination between different actors and technology during these drawn out processes; and • the relationship of technology projects and the professional practices and social imaginations that are associated in technology development, evaluation, and usage. The biographies of technologies and practices approach to new technology advanced in this volume offers us urgent new insight to core empirical and theoretical questions about how and where development projects gain their representations of future use and users, how usage is actually designed, how users' requests and modifications affect designs, and what kind of learning takes place between developers and users in different phases of innovation—all crucial to our understanding and ability to advance new health technology, and innovation more generally.

An Assessment of the National Institute of Standards and Technology Measurement and Standards Laboratories National Research Council, Division on Engineering and Physical Sciences, Board on Assessment of NIST Programs, 2002-09-26 This assessment of the technical quality and relevance of the programs of the Measurement and Standards Laboratories of the National Institute of Standards and Technology is the work of the 165 members of the National Research Council's (NRC's) Board on Assessment of NIST Programs and its panels. These individuals were chosen by the NRC for their technical expertise, their practical experience in running research programs, and their knowledge of industry's needs in basic measurements and standards. This assessment addresses the following: The technical merit of the laboratory programs relative to the state of the art worldwide; The effectiveness with which the laboratory programs are carried out and the results disseminated to their customers; The relevance of the laboratory programs to the needs of their customers; and The ability of the laboratories' facilities, equipment, and human resources to enable the laboratories to fulfill their mission and meet their customers' needs.
