The Future of Nursing Institute of Medicine, Committee on the Robert Wood Johnson Foundation Initiative on the Future of Nursing, at the Institute of Medicine, 2011-02-08 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles-including limits on nurses' scope of practice-should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

The Future of Nursing 2020-2030 National Academies of Sciences Engineering and Medicine,Committee on the Future of Nursing 2020-2030,2021-09-30 The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. *The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity* explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by *The Future of Nursing: Leading Change, Advancing Health* (2011) report.

Nurses' Work, provides an incredible collection of significant historical scholarship and contemporary themes that encourages us to understand and think these questions and the future of nursing.

Educating Nurses Patricia Benner, Molly Sutphen, Victoria Leonard, Lisa Day, 2009-10-30 The authors outline a clear vision of what nursing education can and should be and provide practical exemplars of how we can achieve this vision. This is a call for us to work together as guardians of the discipline to assure that future nurses enter the health care system ready and able to meet the challenges ahead. — PAMELA M. IRONSIDE, director, Center for Research in Nursing Education, Indiana University The profession of nursing in the United States is at a significant moment. Since the last national nursing education study almost forty years ago, profound changes in science, technology, and the nature and settings of nursing practice have reshaped the field. Yet schools have lagged behind in adapting to these changes. Added to this, the profession faces a shortage of nurses and nursing faculty. To meet these challenges, the authors assert that schools, service providers, and the profession must change. They recommend four controversial yet essential changes that are needed to transform nursing education. A volume in The Carnegie Foundation for the Advancement of Teaching's Preparation for the Professions series, the book discusses key topics for the future of the field and offers revolutionary recommendations for change.

Keeping Patients Safe Institute of Medicine, Board on Health Care Services, Committee on the Work Environment for Nurses and Patient Safety, 2004-03-27 Building on the revolutionary Institute

of Medicine reports *To Err is Human* and *Crossing the Quality Chasm, Keeping Patients Safe* lays out guidelines for improving patient safety by changing nurses' working conditions and demands. Licensed nurses and unlicensed nursing assistants are critical participants in our national effort to protect patients from health care errors. The nature of the activities nurses typically perform – monitoring patients, educating home caretakers, performing treatments, and rescuing patients who are in crisis – provides an indispensable resource in detecting and remedying error-producing defects in the U.S. health care system. During the past two decades, substantial changes have been made in the organization and delivery of health care – and consequently in the job description and work environment of nurses. As patients are increasingly cared for as outpatients, nurses in hospitals and nursing homes deal with greater severity of illness. Problems in management practices, employee deployment, work and workspace design, and the basic safety culture of health care organizations place patients at further risk. This newest edition in the groundbreaking Institute of Medicine Quality Chasm series discusses the key aspects of the work environment for nurses and reviews the potential improvements in working conditions that are likely to have an impact on patient safety.

The Nursing Profession A. A. Timofeeva, 2002 The nursing profession, is the largest health care occupation, with more than 2 million jobs. It is also one of the 10 occupations projected to have the largest numbers of new jobs. Licensed Practical Nurse training lasts about one year and is available in about 1,100 State-approved programs, mostly in vocational or technical schools. Nursing homes are expected to offer the most new jobs. Job seekers in hospitals may face competition as the number of hospital jobs for LPNs declines. Job prospects for nursing and home health aides will also be very good because of fast growth and high replacement needs in these large occupations. Minimum education or training is generally required for entry-level jobs, but earnings are low. This book brings together a detailed description of the profession, including the educational requirements as well as what can be expected upon entering the profession. Present and future issues in the field as well are also examined and a selective bibliography is included on books and journals of particular interest to newcomers to the field.
