Pakistan After 9/11 G.N. Gauharm,2003 After the 11 september 2001 attack by the Pakistan-Afghanistan trained terrorists on the world trade centre and Pentagon, Pakistan polity is undergoing a series of convulsions. Immediately the official honey mooning with the Taliban Al Qaida was given up and the US was invited to fight terrorism from Pakistan soil. This book presents how observers view these developments.

The war that won't die David Archibald,2021-06-15 The war that won't die charts the changing nature of cinematic depictions of the Spanish Civil War. In 1936, a significant number of artists, filmmakers and writers – from George Orwell and Pablo Picasso to Joris Ivens and Joan Miró – rallied to support the country's democratically-elected Republican government. The arts have played an important role in shaping popular understandings of the Spanish Civil War and this book examines the specific role cinema has played in this process. The book's focus is on fictional feature films produced within Spain and beyond its borders between the 1940s and the early years of the twenty-first century – including Hollywood blockbusters, East European films, the work of the avant garde in Paris and films produced under Franco's censorial dictatorship. The book will appeal to scholars and students of Film, Media and Hispanic Studies, but also to historians and, indeed, anyone interested in why the Spanish Civil War remains such a contested political topic.

International Film Festivals Tricia Jenkins,2018-09-20 More than 5,000 film festivals take place globally and many of these have only been established in the last two decades. International Film Festivals collects the leading scholarship on this increasingly prominent phenomenon from both historical and contemporary perspectives, using diverse methods including archival research, interviews and surveys and drawing widely from fields like sociology, urban studies and film criticism to patent technology and history. With contributors from across the world and covering the major festivals - Cannes, Venice, Toronto, Berlin - as well as niche, genre and online film festivals, this book is an authoritative and exemplary guide to the evolution of these key sites for film distribution, exhibition and reception. Chapters unravel topics such as the relationship between corporations and festivals, the soft power function they can perform for their host nations and the changing identities of audiences on arrival at, and during exploration of, a given festival venue. Tricia Jenkins' edited volume reconceives the film festival for the global, digital age whilst drawing out its historic importance and ultimately makes a major intervention in film festival studies as well as film and cultural studies more widely.

How to Super Tune and Modify Holley Carburetors David Vizard,2013 In How to Super Tune and Modify Holley Carburetors, best selling author Vizard explains the science, the function, and most importantly, the tuning expertise required to get your Holley carburetor to perform its best for your performance application.

Ideals and Realities Abdus Salam,C. H. Lai,1987 Topic of particular interest is Professor Salam's view on the development and the international nature of science. His insistence that a scientific thought and its creation is the common and shared heritage of mankind which deserves much thought. There are also interesting accounts of Professor Salam himself and of the International Centre for Theoretical Physics at Trieste, Italy.

David Vizard's How to Port and Flow Test Cylinder Heads David Vizard,2012 Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.

Religious Networks in Asia and Beyond Peter Van Der Veer,2012-05-30 Over the past several decades, the economies of Asia have been growing exponentially. But as a result, the political and financial networks of this region have been subject to focus, almost to the exclusion of other narratives. Here, Peter van der Veer shifts the focus onto the religious networks of the region. Crucially, though, he emphasises how embedded religious actors are within not only religious networks, but also political and economic ones. He therefore examines the ways in which religion connects people, offers them opportunities to travel and link up, and enables the movements of people and trade across the world. By examining Christian, Buddhist and Muslim networks across Asia and with the West, this book offers vital analysis for researchers of both modern religion as well as students of politics and trade economics.

Lectures on Random Interfaces Tadahisa Funaki,2016-12-27 Interfaces are created to separate two distinct phases in a situation in which phase coexistence occurs. This book discusses randomly fluctuating interfaces in several different settings and from several points of view: discrete/continuum, microscopic/macrosopic, and static/dynamic theories. The following four topics in particular are dealt with in the book.Assuming that the interface is represented as a height function measured from a fixed-reference discretized hyperplane, the system is governed by the Hamiltonian of gradient of the height functions. This is a kind of effective interface model called $\nabla\phi$ -interface model. The scaling limits are studied for Gaussian (or non-Gaussian) random fields with a pinning effect under a situation in which the rate functional of the corresponding large deviation principle has non-unique minimizers.Young diagrams determine decreasing interfaces, and their dynamics are introduced. The large-scale behavior of such dynamics is studied from the points of view of the hydrodynamic limit and non-equilibrium fluctuation theory. Vershik curves are derived in that limit.A sharp interface limit for the Allen–Cahn equation, that is, a reaction–diffusion equation with bistable reaction term, leads to a mean curvature flow for the interfaces. Its stochastic perturbation, sometimes called a time-dependent Ginzburg–Landau model, stochastic quantization, or dynamic $P(\phi)$ -model, is considered. Brief introductions to Brownian motions, martingales,

and stochastic integrals are given in an infinite dimensional setting. The regularity property of solutions of stochastic PDEs (SPDEs) of a parabolic type with additive noises is also discussed.The Kardar–Parisi–Zhang (KPZ) equation , which describes a growing interface with fluctuation, recently has attracted much attention. This is an ill-posed SPDE and requires a renormalization. Especially its invariant measures are studied.

Me, a Genius? I Was Reborn into Another World and I Think They've Got the Wrong Idea! Volume 1 Nyun,2018-04-05 Kouki has found himself reborn, together with many of his past-life memories, in an alternate version of Japan. There's are no magic or elves?! Then what's the point of being reborn in another world? It seems a little disappointing at first, but somehow his childhood sketches inspire his mother to develop a revolutionary new theory that changes the world forever. This sets into motion a series of misunderstandings that has everyone believing that Kouki is the real genius behind all of the incredible new technology that his mother is rapidly developing. As a result of his apparent genius, Kouki is forced to give up on his peaceful school life to attend the International Science and Technology Academy, where he meets a beautiful Canadian girl called Alice Alford, a robotics engineer named Shingo Saitou, and an expert on space exploration named Megumi Aikawa. Surely, he can't still continue being mistaken for a genius while surrounded by these real geniuses?! Every time Kouki uses his knowledge from his past life, it causes a new misunderstanding, and his ordinary life is gradually turning into an extraordinary life. Kouki can't help but go from one misunderstanding to another in this insane sci-fi comedy!!
