Management of Technology and Operations R. Ray

Gehani, 1998-09-14 An accessible source of winning technology management strategies In Management of Technology and Operations Ray Gehani reveals the basic principles and best practices applied by top technology-driven organizations in the intensely competitive global marketplace. Using a model that technologists can relate to -- a high-performance V-6 engine -- he pinpoints the six sources of competitive advantage that determine both short-term survival and market leadership over the long term. Then, with the help of real-life examples from leading technology-driven organizations, he demonstrates how these global winners integrate project management and pioneering leadership to exploit

the full potential of each of these sources: * Research and development * Production automation and engineering * Information integration * Customer trust and market understanding * Reliability and quality promise * Building the best people. For working engineers and managers in technology-driven organizations of any size, this book provides a common understanding of the goals and methods of managing technology and operations. It is also an excellent text for upper-level undergraduate and graduate students in science, engineering, and business.

Women as Wombs Janice G. Raymond, 1995 Annotation. Renowned scholar and feminist activist, Janice Raymond, delivers a passionate expose and uncovers the alarming ethical, legal and political implications of high-tech biomedical reproductive technologies. She argues that these technologies are neither liberatory nor an issue of reproductive choice. Rather, they violate the integrity of women's bodies, perpetuate prostitution and an international trafficking in women and children, and are a threat to women's basic human rights. *Women As Wombs* is a scathing feminist analysis which contributes groundbreaking insights to the raging debate over reproductive technology.

Handbook of Vacuum Arc Science & Technology Raymond L. Boxman, David M. Sanders, Philip J. Martin, 1996-12-31 This is a comprehensive text describing the basic physics and technological applications of vacuum arcs. Part I describes basic physics of the vacuum arc, beginning with a brief tutorial review of plasma and electrical discharge physics, then describes the arc ignition process, cathode and anode spots which serve as the locus for plasma generation, and resultant interelectrode plasma. Part II describes the applications of the vacuum arc for depositing thin films and coatings, refining metals, switching high power, and as sources of intense electron, ion, plasma, and x-ray beams.

Television Raymond Williams, 2004-06-01 *Television: Technology and Cultural Form* was first published in 1974, long before the dawn of multi-channel TV, or the reality and celebrity shows that now pack the schedules. Yet Williams' analysis of television's history, its institutions, programmes and practices, and its future prospects, remains remarkably prescient. Williams stresses the importance of technology in shaping the cultural form of television, while always resisting the determinism of McLuhan's dictum that 'the medium is the message'. If the medium really is the message, Williams asks, what is left for us to do or say? Williams argues that, on the contrary, we as viewers have the power to disturb, disrupt and to distract the otherwise cold logic of history and technology - not just because television is part of the

fabric of our daily lives, but because new technologies continue to offer opportunities, momentarily outside the sway of transnational corporations or the grasp of media moguls, for new forms of self and political expression.
