Carla Schroder

The East Asian Computer Chip War Ming-chin Monique Chu, 2013-12-04 The semiconductor industry is a vital industry for military establishments worldwide, and the control of, or loss of control of, this key industry has enormous strategic implications. This book focuses on the globalization of the strategic semiconductor industry and the security ramifications of this process. It examines in particular the migration of the Taiwanese chip industry to China as part of the globalization of production processes, and the extent to which such a globalization process poses security challenges to the United States, China and Taiwan. Transcending disciplinary boundaries between international political economy, security studies, and the history of science and technology, this multidisciplinary work provides an in-depth understanding of the globalization-security nexus, and disentangles the key policy issues connected to a potential explosive flashpoint in world politics today.

Economic Integration Across the Taiwan Strait

Peter C. Y. Chow, 2013-01-01 Despite their controversial political relationship, Taiwan and China remain very much entwined economically. This timely volume explores the complicated state of economic and trade relations between the two countries, meticulously unraveling the issue's various threads and presenting an authoritative breakdown of a complex and fascinating economic linkage. Armed with up-to-date original research, contributors offer expert analyses on a variety of issues relating to economic integration between Taiwan and China. These include trade agreements, foreign direct investment, outsourcing of manufacturing and migration of industry, integration of banking and financial markets, and the recent shift toward a more integrated economy with Greater China. The considerable political tension between the two countries is also discussed, as are the economic relationships with neighboring East Asian countries such as Japan and others. In the final chapter, editor Peter C.Y. Chow discusses Taiwan's policy options for the future and offers his expert recommendations for speeding Taiwan's achievement of globalization and widening its ultimate political choices. Professors and students of global economics and East Asian studies will no doubt find this a fresh and invaluable contribution to the literature.

Varieties and Alternatives of Catching-up

Yukihito Sato,Hajime Sato,2016-07-15 This book sheds new light on the advancement of various industries in developing Asian countries through an application and re-examination of catch-up industrialization theory. With contributors presenting their own perspectives on the progression of a range of different industries in Asia, this volume provokes readers to reconsider their current understanding of industrialization in latecomer countries. More specifically, the chapters discuss Taiwan's semiconductor industry, Korea's steel industry, and Malaysia's palm oil industry, amongst others. The authors also explore the 'catch-down' innovation strategy in China and India. Varieties and Alternatives of Catching-up provides a thorough analysis of the strategies employed by numerous Asian countries to radically transform their low-income agricultural economies to middle-income industrialized ones. This book is essential reading for researchers and scholars interested in Asian economic development.

Complications and Quandaries in the ICT Sector
Ashish Bharadwaj, Vishwas H. Devaiah, Indranath
Gupta, 2017-10-27 This book is open access under a
CC BY 4.0 license. With technology standards
becoming increasingly common, particularly in the
information and communications technology (ICT)
sector, the complexities and contradictions at the
interface of intellectual property law and
competition law have emerged strongly. This book
talks about how the regulatory agencies and courts
in the United States, European Union and India are
dealing with the rising allegations of anti-
competitive behaviour by standard essential patent
(SEP) holders. It also discusses the role of

standards setting organizations / standards developing organizations (SSO/SDO) and the various players involved in implementing the standards that influence practices and internal dynamics in the ICT sector. This book includes discussions on fair, reasonable and non-discriminatory (FRAND) licensing terms and the complexities that arise when both licensors and licensees of SEPs differ on what they mean by “fair”, “reasonable” and “non-discriminatory” terms. It also addresses topics such as the appropriate royalty base, calculation of FRAND rates and concerns related to FRAND commitments and the role of Federal Trade Commission (FTC) in collaborative standard setting process. This book provides a wide range of valuable information and is a useful tool for graduate students, academics and researchers.

Interference Mitigation Techniques to Support Coexistence of Ultra-WideBand Systems Abdur Rahim, 2010

Beyond Late Development Alice H. Amsden, Wan-Wen Chu, 2003-04-25 A study of how latecomers catch up in high-tech industries and modern services, based on an in-depth analysis of Taiwan's premier enterprises and government policies. In this book Alice Amsden and Wan-wen Chu cover new ground by analyzing the phenomenon of high-end catch-up. They study how leading firms from the most advanced latecomer countries like Taiwan have increased their market share in mature high-tech industries and services. The profits that true innovators in these industries once enjoyed have already declined, but profit rates are still above average. The latecomer firm that succeeds in

capturing these rents earns second-mover advantage. Amsden and Chu examine the successful second movers in electronics and modern services. The critical factors, they show, are the government policies and large-scale firms that drive skills, speed, and scale. R&D in Taiwan was usually undertaken in conjunction with government labs, which prepared the way for local production of the next hot, mature product. Speed in ramping up at the firm level depended on project execution capabilities and access to capital. Scale proved to be an absolute entry requirement in modern service sectors, and was crucial to win subcontracts from leading foreign firms and to secure key components from world-class suppliers in the electronics industry. The authors challenge current orthodoxy along two lines. First, they argue that government played an important role through interventions that went beyond the market model and overcame the limitations of networking. Interventions possibly promoted mature high-tech even more than mid-tech. Second, the entrepreneurs in Taiwan were nationally owned large-scale firms rather than multinational companies.
