Traces Of Red Paddy Richardson,2011-11-28 Rebecca Thorne is a successful television journalist, but her world is thrown into turmoil when her Saturday night programme is axed because of falling ratings. Not only will she lose her job but her big story on the convicted triple murderer Connor Bligh, whom Rebecca believes is innocent, has to be abandoned. Rebecca's lover Joe, a married man and the barrister representing Bligh, also thinks Bligh is innocent or does he? And if he loves Rebecca so much, why is he prepared to cast her off? Meanwhile Bligh languishes in jail, convicted of three brutal murders and continuing to protest his innocence. He's clearly not a saint but did he do it? Rebecca refuses to let the matter lie. Paddy Richardson's fourth novel is psychological crime fiction at its best. Praise for Paddy Richardson's previous books: 'It's a compelling and involving read. Richardson . . . seems born to be a crime writer.' Nicky Pellegrino, Herald on Sunday 'I could not put it down' Latitude 'Expertly melding family drama with psychological thriller' NZ Listener

Systems Engineering and Architecting Laurence Bellagamba, 2012-03-26 Systems Engineering and Architecting: Creating Formal Requirements presents formal requirements to help you accomplish key systems engineering and architecting activities more efficiently. The formal requirements-explicit, executable, verifiable instructions-explain how to model systems behavior, make decisions, establish natural language requirements, and improve your systems engineering and architecting processes. Each chapter opens with case studies and lessons learned, which supply the real-world context for the formal requirements. Topics covered include how to use fuzzy logic and agents to model uncertainty and how to make decisions when confronted with ambiguity. The book also clarifies the differences between architecting and systems engineering. Mathematical Tools for Systems Engineering and Architecting Written in Mathematica (R), each formal requirement provides a tool or serves as the algorithm for a more efficient implementation in another form. All of the requirements are available as an open source library for anyone to use, improve upon, or add to. Worked examples, illustrations, and example surveys help you apply the requirements to your own systems. The book also lists heuristics to guide you in those systems engineering or architecting activities that cannot yet be formally stipulated. Bring More Consistency to Your Systems Development and Management Acknowledging that much of the practice remains an art, this book brings as much scientific rigor as possible to the tasks performed by systems engineers and architects. Written by a director of engineering who led systems engineering or architecting efforts for the Space Shuttle Program, Space Control Architecture Development, and others, this book shows you how to develop more consistent processes for large-scale systems.

Wittgenstein and Quine Robert Arrington, Hans-Johann Glock, 2002-09-11 This unique study brings together for the first time two of the most important philosophers of this century. Never before have these two thinkers been compared - and commentators' opinions on their relationship differ greatly. Are the views of Wittgenstein and Quine on method and the nature of philosophy comparable or radically opposed? Does Wittgenstein's concept of language engender that of Quine, or threaten its philosophical foundations? An understanding of the similarities and differences between the thought of Wittgenstein and of Quine is essential if we are to have a full picture of contemporary philosophy. This collection of essays offers diverse and original ways in which to view their relationship.

Dragonflies and Damselflies of South Africa Michael J. Samways, 2008 Dragonflies are a beautiful, important and conspicuous component of freshwater, whether still or flowing. South Africa's dragonflies are particularly interesting as many are special or endemic to the area, making it a part of the world of great conservation significance. This book discusses this exciting dragonfly fauna. Dragonflies are a beautiful, important and conspicuous component of freshwater, whether still or flowing. They are also important indicators of freshwater quality and condition, which is significant for current and future conservation initiatives in South Africa. The country's dragonflies are particularly interesting as many are special or endemic to the area, making it a part of the world of great conservation significance. Sadly however, many of these endemic species are highly threatened, especially by invasive alien trees which shade out their habitat. This book is about this exciting dragonfly fauna. Besides aiming at increasing awareness of these lovely and sensitive insects, it enables their identification, using several approaches, from simple flick-through to the use of comprehensive identification keys. Each species is also given a Dragonfly Biotic Index, covering a spectrum from the most common, widespread and tolerant species through to the most threatened, rare and sensitive ones. Michael Samways is Professor and Chair of the Department of Conservation Ecology and Entomology, Stellenbosch University. He is a Fellow of the Royal Society of South Africa and a Fellow of the University of KwaZulu-Natal. He has published 260 scientific papers and written several books on insect biology and conservation, the most recent of which is Insect Diversity Conservation, Cambridge University Press. He has won several awards, and in the last two years, these include the Stellenbosch University Rector's Award for Research Excellence, the John Herschel Medal from the Royal Society of South Africa, and the Senior Captain Scott Medal from the South African Academy for Science and Art. Michael is on several international editorial boards and involved with various international committees devoted to invertebrate conservation. Indeed, his research team is dedicated to the conservation of invertebrates and other biodiversity, which so enrich our planet.

Red Sky at Night Andy Croft, Adrian Mitchell, 2003 An anthology of British socialist poetry. It starts with William Blake, John Clare, Charles Dickens and Shelley, and ends with Carol Ann Duffy, Benjamin Zephaniah, Jackie Kay and Mr Social Control. Here we have the poetry of the first world war (Isaac Rosenberg, Ivor Gurney); the celebration of revolution (Hugh MacDiarmid, D H Lawrence); the hungry thirties (Auden, C Day Lewis and Louis MacNiece);

the second world war years (Alun Lewis, Hamish Henderson); new post-war voices (Alex Comfort, Roger McGough); the years of colonial liberation (Adrian Mitchell, James Berry); new voices of black writing (Grace Nichols, Jean Binta Breeze) and the women's movement (Liz Lochhead, Alison Fell); the Thatcher years (Sean O'Brien, Anne Stevenson) and modern times (Kathleen Jamie, Linda France). In all - 153 poems from 117 poets. Many of the poets will be well-known to poetry readers....a few will be forgotten voices. Red Sky At Night tells the story of the movement of an idea from the margins of British life to the center, and then out again to its disreputable edges. It tells the story of the engagement by British poets with contemporary political events. And it provides a sustained political footnote to the literary history of the last century.
