Technologies for Interactive Digital Storytelling and Entertainment Stefan Göbel, Ulrike Spierling, Anja Hoffmann, Ido Iurgel, Oliver Schneider, Johanna Dechau, Axel Feix, 2004-06-11 Interactive Digital Storytelling has evolved as a prospering research topic banding together formerly disjointed disciplines stemming from the arts and humanities as well as computer science. It's tied up with the notion of storytelling as an effective means for the communication of knowledge and social values since the existence of humankind. It also builds a bridge between current academic trends investigating and formalizing computer games, and developments towards the experience-based design of human-media interaction in general. In Darmstadt, a first national workshop on Digital Storytelling was organized by ZGDV e.V. in 2000, which at that time gave an impression about the breadth of this new research field for computer graphics (DISTEL 2000). An international follow-up was planned: the 1st International Conference on Technologies for Interactive Digital Storytelling and Entertainment (TIDSE 2003). Taking place in March 2003, it showed a more focussed range of research specifically on concepts and first prototypes for automated storytelling and autonomous characters, including modelling of emotions and the user experience. At TIDSE 2004, an established and still-growing community of researchers gathered together to exchange results and visions. This confirms the construction of a series of European conferences on the topic - together with the International Conference on Virtual Storytelling, ICVS (conducted in 2001 and 2003 in France) - which will be further cultivated.
