Pseudo-Noun Incorporation and Differential Object Marking Imke Driemel,2023-03-30 This book provides a detailed cross-linguistic study of pseudo-noun incorporation, a phenomenon whereby an argument forms a 'closer than usual' relation with the verb. Imke Driemel draws on data from Tamil, Mongolian, Korean, Turkish, and German, and applies diagnostic tests across eleven noun types in each of the languages under consideration. What emerges is a coherent effect of pseudo-incorporated arguments that maps loss of case marking to obligatory narrow scope, lack of binding and control relations, and a potentially restricted movement pattern. The book provides a unifying theory that is able to capture all properties with a single assumption: pseudo-incorporation effects result from noun phrases that are made up of a nominal and a verbal category feature; implemented in a derivational framework, the nominal feature is active early in the derivation, being responsible for c-selection and nominal modification, while the verbal feature is active late and crucially derives the effects we have come to recognize as pseudo-noun incorporation. One important empirical contribution of this study stems from the observation that pseudo-incorporation does not have to be the only reason for optional case marking. Tamil and Korean provide evidence that only a subset of optionally case-marked noun types also show a correlation with scope, binding, control, and movement constraints. This insight enforces the conclusion that the same language can make use of both pseudo-noun incorporation and differential object marking.

**Agreement beyond the Verb** Marina Chumakina,Oliver Bond,Steven Kaye,2023-11-30 This book explores unusual patterns of agreement, one of the most intriguing and theoretically challenging aspects of human language. Agreement is typically thought to reflect a structural relationship between a verb and its arguments within the clause, and all major theories of agreement have been developed with the centrality of this relationship in mind. But beyond the verb, items belonging to practically every other part of speech have been found to function as agreement targets, including adpositions, adverbs, converbs, nouns, pronouns, complementizers, and other conjunctions. Data on these targets provide rich insights into the structural domains in which agreement operates, demonstrating that unusual targets can be associated with unexpected domains that are independent of the agreement domain of the verb. Following an introduction to the typology of unusual targets and unexpected domains across the world's languages, the chapters in this volume provide detailed treatments of a wide range of rare and complex agreement phenomena in seven languages, belonging to five different language families of Eurasia and the Pacific. The contributions are all based on novel data collected by the authors, which detail the syntactic, semantic, and pragmatic properties of agreement on non-verbal targets within the clause.

*Risk, Reliability and Safety: Innovating Theory and Practice* Lesley Walls,Matthew Revie,Tim Bedford,2016-11-25 The safe and reliable performance of many systems with which we interact daily has been achieved through the analysis and management of risk. From complex infrastructures to

consumer durables, from engineering systems and technologies used in transportation, health, energy, chemical, oil, gas, aerospace, maritime, defence and other sectors, the management of risk during design, manufacture, operation and decommissioning is vital. Methods and models to support risk-informed decision-making are well established but are continually challenged by technology innovations, increasing interdependencies, and changes in societal expectations. Risk, Reliability and Safety contains papers describing innovations in theory and practice contributed to the scientific programme of the European Safety and Reliability conference (ESREL 2016), held at the University of Strathclyde in Glasgow, Scotland (25–29 September 2016). Authors include scientists, academics, practitioners, regulators and other key individuals with expertise and experience relevant to specific areas. Papers include domain specific applications as well as general modelling methods. Papers cover evaluation of contemporary solutions, exploration of future challenges, and exposition of concepts, methods and processes. Topics include human factors, occupational health and safety, dynamic and systems reliability modelling, maintenance optimisation, uncertainty analysis, resilience assessment, risk and crisis management.
