Highlighting Fulton's struggles to become a respected inventor and his early work as an artist, this book shows how Fulton's most memorable achievements came as a result of his using his talents to improve upon and perfect the ideas and inventions of others. It also examines Fulton's lesser-known innovations, including his work on perfecting the submarine as a weapon of war.

These groundbreaking inventions include the very earliest discoveries to modern-day breakthroughs in science, food, transportation, technology, toys, and more. Four American Inventors; Robert Fulton, Samuel F. B. Morse, Eli Whitney, Thomas A. Edison Frances Melville Perry,1901

The Fire of His Genius Kirkpatrick Sale,2002-09-10 None of the spectators who gathered on the Hudson River shore on August 17, 1808, could have known the importance of the object they had come to see and, mostly, deride: Robert Fulton's new steamboat. But as Kirkpatrick Sale shows in this remarkable biography, Fulton's large, noisy, showy, fast, brash, exciting, powerful, and audacious machine would -- for better or worse -- irrevocably transform nineteenth-century America. Set against a brilliant portrait of a dynamic period in history, The Fire of His Genius tells the story of the fiercely driven man whose invention opened up America's interior to waves of settlers, created and sustained industrial and plantation economies in the nation's heartland, and facilitated the destruction of the remaining Indian civilizations. Probing Fulton's genius but also laying bare the darker side of the man -- and the darker side of the American dream -- Kirkpatrick Sale tells an extraordinary tale with deftness, zest, and unflagging verve.

Edison's Electric Light Robert Friedel,Paul B. Israel,2010-07-19 In September 1878, Thomas Alva Edison brashly—and prematurely—proclaimed his breakthrough invention of a workable electric light. That announcement was followed by many months of intense experimentation that led to the successful completion of his Pearl Street station four years later. Edison was not alone—nor was he first—in developing an incandescent light bulb, but his was the most successful of all competing inventions. Drawing from the documents in the Edison archives, Robert Friedel and Paul Israel explain how this came to be. They explore the process of invention through the Menlo Park notes, discussing the full range of experiments, including the testing of a host of materials, the development of such crucial tools as the world's best vacuum pump, and the construction of the first large-scale electrical generators and power distribution systems. The result is a fascinating story of excitement, risk, and competition. Revised and updated from the original 1986 edition, this definitive study of the most famous invention of America's most famous inventor is completely keyed to the printed and electronic

versions of the Edison Papers, inviting the reader to explore further the remarkable original sources.

The Inventor of Stereo Robert Alexander,2013-04-11 This book is the definitive study of the life and works of one of Britain's most important inventors who, due to a cruel set of circumstances, has all but been overlooked by history. Alan Dower Blumlein led an extraordinary life in which his inventive output rate easily surpassed that of Edison, but whose early death during the darkest days of World War Two led to a shroud of secrecy which has covered his life and achievements ever since. His 1931 Patent for a Binaural Recording system was so revolutionary that most of his contemporaries regarded it as more than 20 years ahead of its time. Even years after his death, the full magnitude of its detail had not been fully utilized. Among his 128 Patents are the principle electronic circuits critical to the development of the world's first electronic television system. During his short working life, Blumlein produced patent after patent breaking entirely new ground in electronic and audio engineering. During the Second World War, Alan Blumlein was deeply engaged in the very secret work of radar development and contributed enormously to the system eventually to become 'H2S'- blind bombing radar. Tragically, during an experimental H2S flight in June 1942, the Halifax bomber in which Blumlein and several colleagues were flying, crashed and all aboard were killed. He was just days short of his 39th birthday. For many years there have been rumours about a biography of Alan Blumlein, yet none has been forthcoming. This is the world's first study of a man whose achievements should rank among those of the greatest Britain has produced. This book provides detailed knowledge of every one of his patents and the process behind them, while giving an in depth study of the life and times of this quite extraordinary man.
