Sample Book Insights: #1 Trump's visit to Moscow was the beginning of a bromance that would upend American politics and eventually scandalize his presidency. It began when he met Rob Goldstone, a music publicist who was trying to help Emin Agalarov, a Azerbaijani pop singer, achieve his dreams. #2 In early 2013, Goldstone was looking for Emin to get more media exposure, especially in the United States. He suggested that Emin perform at a Miss Universe pageant. The event had a reputation for featuring emerging talent. Trump was interested. #3 In June 2013, Trump presided over the Miss USA pageant, which was owned by the Miss Universe company. The event was held in Las Vegas. Trump was solicitous of his new partners, asking Aras Agalarov what type of jet he owned. #4 On November 3, Trump announced that the Miss Universe pageant would be held in Russia in November. He called Emin and Aras Agalarov the richest men in Russia.

Computational Analysis of Polymer Processing J.R.A. Pearson, S.M. Richardson, 2012-12-06

Large, fast, digital computers have been widely used in engineering practice and their use has had a large impact in many fields. Polymer processing is no exception, and there is already a substantial amount of literature describing ways in which processes can be analysed, designed or controlled using the potentialities of modern computers. The emphasis given varies with the application, and most authors tend to quote the results of their calculations rather than describing in any detail the way the calculations were undertaken or the difficulties experienced in carrying them out. We aim to give here as useful and connected an account as we can of a wide class of applications, for the benefit of scientists and engineers who find themselves working on polymer processing problems and feel the need to undertake such calculations. The major application we have in mind is the simulation of the dynamics of the various physical phenomena which arise in a polymer process treated as a complex engineering system. This requires that the system be reasonably well represented by a limited number of relatively simple subprocesses whose connections can be clearly identified, that the dominant physical effects relevant to each subprocess can be well defined in a suitable mathematical form and that the sets of equations and boundary conditions developed to describe the whole system can be successfully discretised and solved numerically.

Russia's Liberal Media Vera Slavtcheva-Petkova, 2018-03-21 This book examines the challenges and pressures liberal journalists face in Putin's Russia. It presents the findings of an in-depth qualitative study, which included ethnographic observations of editorial meetings during the conflict in Ukraine. It also provides a theoretical framework for evaluating the Russian media system and a historical overview of the development of liberal media in the country. The book focuses on some of Russia's most influential liberal national news outlets: the deadliest newspaper Novaya Gazeta,

Russia's last independent radio station Radio Echo of Moscow (Ekho Moskvyy) and US Congress-funded Radio Free Europe/Radio Liberty. The fieldwork included ethnographic observations of editorial meetings, long interviews with editors and journalists as well as documentary analysis. The monograph makes theoretical contributions to three main areas: 1. Media systems and terms of reference. 2. Journalism: cultures, role conceptions, and relationship with power, culture and society. 3. Mediatisation of conflict and nationhood.

Liquid Film Coating P.M. Schweizer, S.F. Kistler, 2012-12-06 This multi-authored volume provides a comprehensive and in-depth account of the highly interdisciplinary science and technology of liquid film coating. The book covers fundamental principles from a wide range of scientific disciplines, including fluid mechanics and transport phenomena, capillary hydrodynamics, surface and colloid science. The authors, all acknowledged experts in their fields, represent a balance between industrial and academic points of view. Throughout the text, many case studies illustrate how scientific principles together with advanced experimental and theoretical methods are applied to develop and optimize manufacturing processes of ever increasing sophistication and efficiency. In the first part of the book, the authors systematically recount the underlying physical principles and important material properties. The second part of the book gives a comprehensive overview of the most advanced experimental, mathematical and computational methods available today to investigate coating processes. The third part provides an overview and critical literature review for all major classes of liquid film coating processes of industrial importance.

News Media and Power in Russia Olessia Koltsova, 2006-09-27 The end of communist rule in the Soviet Union brought with it a brave new world of media and commerce. Formerly state-owned enterprises were transformed, often through private ownership, and new corporations sprung up

overnight to take advantage of the new atmosphere of freedom. Until now, most research on media and news production in Russia has focused on the scope of government control and comparisons with the communist era. However, extra-governmental controls and the challenges of operating in a newly capitalist environment have been just as important – if not more so – in the formation of the new media climate. Filling the gap in the literature, this book examines the various agents who ‘make’ the news, and discusses the fierce struggle among the various agents of power involved. Drawing on existing theories and scholarship, the book provides a wealth of detail on the actual daily practices of news production in Russia. Original research is combined with compelling first-hand accounts of news production and dissemination to provide an incisive look at the issues and power structures Russian journalists face on a daily basis.

Summary of Joshua Yaffa's Between Two Fires Everest Media, 2022-05-22T22:59:00Z Please note: This is a companion version & not the original book. Sample Book Insights: #1 In the final days of 1999, just as he had each December for several years, Konstantin Ernst prepared to film the presidential New Year’s address. Yeltsin asked him to film it on New Year’s Eve at five in the morning. #2 On the last day of the twentieth century, Yeltsin announced his resignation from the presidency. His successor would be Vladimir Putin, a politician who most Russians were just getting to know. #3 The next order of business was to film a New Year’s address by Putin, which would air at midnight. Putin’s face looked young and taut on camera, while Yeltsin looked extremely unwell. #4 Ernst, the president of Channel One, was born in 1961, the scion of a notable family within the Soviet scientific establishment. He was bright and ambitious, and by the mid-1980s, he bristled at the restrictions imposed by the country’s decaying gerontocracy.

Can Journalism Be Saved? Rachel Davis Mersey, 2010-08-06 This book challenges the once-

dominant social responsibility model and argues that a new, individual-first paradigm is what will allow journalism to survive in today's crowded media marketplace. By some measures, it would seem that print journalism is dying. Journalism recently suffered one of its worst circulation declines in years: a drop of more than ten percent in the a six month period ending September 30, 2009. The Rocky Mountain News in Denver, CO, closed its doors in 2009—after it dominated the AP awards in 2008, and was lauded for an investigative expose on unfair treatment of former nuclear workers. Even the New York Times and the Washington Post are experiencing financial trouble. But print advertising revenue still trumps online advertising revenue ten-fold. Is there hope yet for traditional journalism? This book reviews the complicated challenge facing journalism, tracing its 19th-century community-oriented origins and documenting the vast expansion of the news business via blogs and other Internet-enabled outlets, user-generated content, and news-like alternatives. The author argues that a radical shift in mindset—striving to meet each individual's demands for what he wants to know—will be necessary to save journalism.

The Dark Double Andrei P. Tsygankov,2019-03-01 Although many observers argue that US-Russia relations are a simple reflection of elites' political and economic preferences in both countries, these preferences tend to arise from pre-existing belief systems that are deeply rooted in the public and accentuated by mass media. In Dark Double, Andrei P. Tsygankov focuses on the driving power of values and media, in addition to political and economic interests, in structuring US-Russia relations. By analyzing mainstream US newspapers and other media sources, Tsygankov identifies five media narratives involving Russia since the Cold War's end and studies them through a framework of three inter-related factors: historic and cultural differences between the two

countries, inter-state competition, and polarizing domestic politics. He shows how Americans' negative views toward Russia draw from a deep wellspring of suspicion and are further enhanced by a biased media that regularly exploits such negativity, Russia's centralization of power and anti-American attitudes. Given the intensity of our current impasse with Russia, Dark Double represents an important intervention that forces us to think about the sources of conflict in a new way.
