Lumsden, Joanna

Limited Edition Sophie Lovell,2009-01-01 Limited Edition is the new buzzword in furniture design. The demand for unique pieces is steadily increasing. With prototypes, one-offs and limited product lines, designers are celebrating a cult of individuality for all price classes. Furniture prototypes have always been an element of the industrial design process, but now they are being brought from the workshops and presented to the public as embodiments of one of the most exciting creative fields of our age. In the global village with its standardized commodities, exclusive one-offs with an artisanal flavor are turning into coveted objects. Limited furniture series satisfy the collector's thirst for objects that dissolve the boundary between art and design. Limited Edition pursues this new phenomenon and uncovers its background in meticulous investigative essays based on the author's ongoing interchange with key designers, gallery owners, auctioneers and manufacturers. With a rich selection of magnificent images and an attractive layout, it presents the best and most breathtaking pieces by the leading designers.

CBT for Older People Ken Laidlaw,2014-12-15 Going beyond simple procedural modifications, this is the first book to address how the application of gerontology to CBT practice can augment CBT's effectiveness and appropriateness with older people. Taking you step-by-step through the CBT process and supported by clinical case examples, therapeutic dialogue, points for reflection and hints and tips, the book examines: - basic theoretical models in CBT and how to relate them to work with older people - main behavioural interventions and their practical application - social context and relevant theories of aging - implications of assessment, diagnosis and treatment - issues of anxiety, worry and depression, and more specialist applications of CBT for chronic illnesses - latest developments, thinking and empirical evidence. This is an invaluable companion for any clinical psychology, counselling, CBT/IAPT, and social care trainee or professional new to working with older people, especially those who are keen to understand how the application of CBT may be different. Professor Ken Laidlaw is Head of the Department of Clinical Psychology, University of East Anglia.

[Design Recommendations for Intelligent Tutoring Systems: Volume 8 - Data Visualization](#) Anne Sinatra,Arthur C. Graesser,Xiangen Hu,Benjamin Goldberg,Andrew J. Hampton,2020-12-30 This book on data visualization is the eighth in a planned series of books that examine key topics (e.g., learner modeling, instructional strategies, authoring, domain modeling, assessment, team tutoring, self-improving systems, data visualization, and competency based scenario design) in intelligent tutoring system (ITS) design. This book focuses on data visualization and how it is applied in ITSs. The chapters within this book specifically examine topics in relationship to the Generalized Intelligent Framework for Tutoring (GIFT) (Sotilare, Brawner, Goldberg & Holden, 2012; Sotilare, Brawner, Sinatra, & Johnston, 2017). GIFT is an open-source, domain-independent, modular, service-oriented architecture for ITSs. The design of GIFT allows for reusability, reduction in authoring time, and reducing the skill level needed to create an ITS. GIFT provides functionality to create ITSs, distribute ITSs to learners through the Cloud, conduct research to evaluate ITSs, and to examine instructional outcomes. Data visualization is an important topic for ITSs, as there are many different users of the systems (including learners, instructors, researchers, subject matter experts). The data that is collected by the ITS can be organized and displayed in a number of different ways. The current book includes a general discussion of how data visualizations can be applied in ITSs, as well as detailed specific examples of existing implementations, and technical details related to incorporating data visualization in ITSs. We believe this book can be used as a design tool for data visualization interfaces in ITSs.

[Computer-Aided Architectural Design. Design Imperatives: The Future is Now](#) David Gerber,Evangelos Pantazis,Biayna Bogosian,Alicia Nahmad,Constantinos Miltiadis,2022-03-24 This book constitutes selected papers of the 19th International Conference on Computer-Aided Architectural Design Futures, CAAD Futures 2021, held in Los Angeles, CA, USA, in July 2021. The papers are organized in topical sections on past futures and present futures: research and pedagogy; past futures and present futures: aesthetics and ethics of space; architectural automations and augmentations: design; architectural automations and augmentations: fabrication; architectural automations and augmentations: environment; architectural automations and augmentations: spatial computing.

[Human Interaction with Complex Systems](#) Celestine A. Ntuen,Eui H. Park,1996-10-31 Human-System interaction has been and will continue to be of interest to many researchers of various disciplines: engineers, computer scientists, psychologists, and social scientists. The research in Human-System Interaction (HSI) has progressed from the era of using anthropomorphic data to design workspace to the current period which utilizes human and artificial sensors to design sensory-based cooperative workspace. In either of these developments, HSI has been known to be complex. In 1994, we initiated a series of symposiums on Human Interaction with Complex Systems. It was then that various ideas surrounding HSI for today and tomorrow were discussed by many scientists in the related disciplines. As a follow-up, in 1995 the Second Symposium was organized. The objective of this symposium was to attempt to define a framework, principles, and theories for HSI research. This book is the result of that symposium. The 1995 symposium brought together a number of experts in the area of HSI. The symposium was more focused on expert opinions and testimonies than traditional meetings for technical papers. There were three reasons for that approach.

[Informed by Knowledge](#) Kathleen L. Mosier,Ute M. Fischer,2011-01-07 The focus of this book is on how experts adapt to complexity, synthesize and interpret information in context, and transform or fuse disparate items of information into coherent knowledge. The chapters examine these processes across experts (e.g. global leaders, individuals in extreme environments, managers, police officers, pilots, commanders, doctors, inventors), across contexts (e.g. space and space analogs, corporate organizations, command and control, crisis and crowd management, air traffic control, the operating room, product development), and for both individual and team performance. Successful information integration is a key factor in the success of diverse endeavors, including team attempts to climb Mt. Everest, crowd control in the Middle East, and remote drilling operations. This volume is divided into four sections, each with a specific focus on an area of expert performance, resulting in a text that covers a wide range of useful information. These sections present well-researched discussions, such as: the management of complex situations in various fields and decision contexts; technological and training approaches to facilitate knowledge management by individual experts and expert teams; new or neglected perspectives in expert decision making; and the importance of 'modeling' expert performance through techniques and frameworks such as Cognitive Task Analysis, computational architectures based on the notion of causal belief mapping such as 'Convince Me,' or the data/frame model of sensemaking. The volume provides essential reading for researchers and practitioners of Naturalistic Decision Making and those who study Expertise; Organizational and Cognitive Psychologists; and researchers and students in Business and Engineering.

[Analysis, Design and Evaluation of Man-Machine Systems](#) 1992 H.G. Stassen,2014-06-28 Containing 4 plenary papers and 38 technical papers, this volume contributes to the literature on the important subject of man-machine systems. The many topics discussed include human performance skills, knowledge engineering and expert systems, training procedures, human performance and mental load models, and human-machine interfaces.
