Childress,Linda Slakey,2015-10-15 Higher education is coming under increasing scrutiny, both publically and within academia, with respect to its ability to appropriately prepare students for the careers that will make them competitive in the 21st-century workplace. At the same time, there is a growing awareness that many global issues will require creative and critical thinking deeply rooted in the technical STEM (science, technology, engineering, and mathematics) disciplines. However, the existing and ingrained structures of higher education, particularly in the STEM fields, are not set up to provide students with extensive skill development in communication, teamwork, and divergent thinking, which is needed for success in the knowledge economy. In 2011 and again in 2014, an international conference was convened to bring together university leaders, educational policymakers and researchers, and funding agency representatives to discuss the issue of institutional transformation in higher education, particularly in the STEM disciplines. Central to the issue of institutional transformation is the ability to provide new forms of instruction so that students can gain the variety of skills and depth of knowledge they will need. However, radically altering approaches to instruction sets in motion a domino effect that touches on learning space design, instructional technology, faculty training and reward structures, course scheduling, and funding models. In order for one piece to move, there must be coordinated movement in the others, all of which are part of an entrenched and interconnected system. Transforming Institutions brings together chapters from the scholars and leaders who were part of the 2011 and 2014 conferences. It provides an overview of the context and challenges in STEM higher education, contributed chapters describing programs and research in this area, and a reflection and summary of the lessons from the many authors' viewpoints, leading to suggested next steps in the path toward transformation.

*Knowledge Utilization Systems in Education* William J. Paisley,Matilda Butler,1983-04  
Abstract: A reference text for professional educators delineates some of the history, current status, and future prospects of educational knowledge utilization systems, providing 16 authoritative overview articles and 9 detailed case studies. The articles address 3 general aspects: (1) the educational and political preconditions for the emergence and development of dissemination, technical assistance, and networking programs from 1965 to the late 1970's; (2) descriptions of a wide range of systems and programs concerning knowledge utilization, emphasizing the ERIC system as the keystone

of bibliographic storage and retrieval in education; and (3) highlights of current and future issues in knowledge utilization systems and programs. (wz).
