Safety and Reliability of Software Based Systems Roger Shaw, 2012-12-06

Safety and Reliability of Software Based Systems contains papers, presented at the twelfth annual workshop organised by the Centre for Software Reliability. Contributions come from different industries in many countries, and provide discussion and cross-fertilisation of ideas relevant to systems whose safety and/or reliability are of paramount concern. This book discusses safety cases and their varying roles in different industries; using measurement to improve reliability and safety of software-based systems; latest developments in managing, developing and assessing software intensive systems where reliability and/or safety are important considerations; and practical experiences of others in industry.

The Revolution Will Not Be Televised Noriko Manabe, 2015-12-18 Nuclear power has been a contentious issue in Japan since the 1950s, and in the aftermath of the Fukushima nuclear power plant disaster, the conflict has only grown. Government agencies and the nuclear industry continue to push a nuclear agenda, while the mainstream media adheres to the official line that nuclear power is Japan's future. Public debate about nuclear energy is strongly discouraged. Nevertheless, antinuclear activism has swelled into one of the most popular and passionate movements in Japan, leading to a powerful wave of protest music. *The Revolution Will Not Be Televised: Protest Music After Fukushima* shows that music played a central role in expressing antinuclear sentiments and mobilizing political resistance in Japan. Combining musical analysis with ethnographic participation, author Noriko Manabe offers an innovative typology of the spaces central to the performance of protest music--cyberspace, demonstrations, festivals, and recordings. She argues that these four spaces encourage different modes of participation and methods of political messaging. The openness, mobile accessibility, and potential anonymity of cyberspace have allowed musicians to directly challenge the ethos of silence that permeated Japanese culture post-Fukushima. Moving from cyberspace to real space, Manabe shows how the performance and reception of music played at public demonstrations are shaped by the urban geographies of Japanese cities. While short on open public space, urban centers in Japan offer protesters a wide range of governmental and commercial spaces in which to demonstrate, with activist musicians tailoring their performances to the particular landscapes and soundscapes of each. Music festivals are a space apart from everyday life, encouraging musicians and audience members to freely engage in political expression through informative and immersive performances. Conversely, Japanese record companies and producers discourage major-label musicians from expressing political views in recordings, forcing antinuclear musicians to express dissent indirectly: through allegories, metaphors, and metonyms. The first book on Japan's antinuclear music, *The Revolution Will Not Be Televised* provides a compelling new perspective on the role of music in political movements.

Making Systems Safer Chris Dale, Tom Anderson, 2009-12-15 *Making Systems Safer* contains the papers presented at the eighteenth annual Safety-critical Systems Symposium, held at Bristol, UK, in February 2010. The Symposium is for engineers, managers and academics in the field of system safety, across all industry sectors, so the papers making up this volume offer a wide-ranging coverage of current safety topics, and a blend of academic research

and industrial experience. They include both recent developments in the field and discussion of open issues that will shape future progress. The first paper reflects a tutorial – on Formalization in Safety Cases – held on the first day of the Symposium. The subsequent 15 papers are presented under the headings of the Symposium's sessions: Perspectives on Systems Safety, Managing Safety-Related Projects, Transport Safety, Safety Standards, Safety Competencies and Safety Methods. The book will be of interest to both academics and practitioners working in the safety-critical systems arena.

The Orphaned Land V. B. Price, 2011-11-16 Although most people prefer not to think about them, hazardous wastes, munitions testing, radioactive emissions, and a variety of other issues affect the quality of land, water, and air in the Land of Enchantment, as they do all over the world. In this book, veteran New Mexico journalist V. B. Price assembles a vast amount of information on more than fifty years of deterioration of the state's environment, most of it hitherto available only in scattered newspaper articles and government reports. Viewing New Mexico as a microcosm of global ecological degradation, Price's is the first book to give the general public a realistic perspective on the problems surrounding New Mexico's environmental health and resources.

Computers at Risk National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Commission on Physical Sciences, Mathematics, and Applications, System Security Study Committee, 1990-02-01 Computers at Risk presents a comprehensive agenda for developing nationwide policies and practices for computer security. Specific recommendations are provided for industry and for government agencies engaged in computer security activities. The volume also outlines problems and opportunities in computer security research, recommends ways to improve the research infrastructure, and suggests topics for investigators. The book explores the diversity of the field, the need to engineer countermeasures based on speculation of what experts think computer attackers may do next, why the technology community has failed to respond to the need for enhanced security systems, how innovators could be encouraged to bring more options to the marketplace, and balancing the importance of security against the right of privacy.

Essentials of Biological Security Lijun Shang, Weiwen Zhang, Malcolm Dando, 2024-05-20 This is a fundamental resource for life and associated scientists to raise awareness and understanding of biological security with regards to malign manipulation of scientific findings. The book is written by experts who have been engaged in biological security issues for decades, but in a systematically organized manner so that it is accessible to the wide range of different life and associated specialists who are creating the revolution in the sciences and technologies converging around the life sciences and thus radically changing our capabilities for the manipulation of

living organisms for good purposes, but also opening up many more dangerous opportunities for malign manipulation in what has been termed dual-use applications such as novel biological and toxin weapons.

The Operators Michael Hastings, 2012-01-05 The inspiration for the Netflix original movie *War Machine*, starring Brad Pitt, Tilda Swinton, and Ben Kingsley From the author of *The Last Magazine*, a shocking behind-the-scenes portrait of our military commanders, their high-stake maneuvers, and the political firestorm that shook the United States. In the shadow of the hunt for Bin Laden and the United States' involvement in the Middle East, General Stanley McChrystal, the commanding general of international and U.S. forces in Afghanistan, was living large. His loyal staff liked to call him a "rock star." During a spring 2010 trip, journalist Michael Hastings looked on as McChrystal and his staff let off steam, partying and openly bashing the Obama administration. When Hastings's article appeared in *Rolling Stone*, it set off a political firestorm: McChrystal was unceremoniously fired. In *The Operators*, Hastings picks up where his *Rolling Stone* coup ended. From patrol missions in the Afghan hinterlands to senior military advisors' late-night bull sessions to hotel bars where spies and expensive hookers participate in nation-building, Hastings presents a shocking behind-the-scenes portrait of what he fears is an unwinnable war. Written in prose that is at once eye-opening and other times uncannily conversational, readers of *No Easy Day* will take to Hastings' unyielding first-hand account of the Afghan War and its cast of players.

Rethinking Security in the Age of Migration Ali Bilgic, 2013-09-02 Migration and especially irregular migration are politically sensitive and highly debated issues in the developed world, particularly in Europe. This book analyses irregular protection-seeking migration in Europe, with close attention to sub-Saharan migration into the EU, from the perspective of emancipatory security theory. Some individuals leave their countries because political, social, and economic structures largely fail to provide protection. This book examines how communities respond to migrants who seek protection and security, where migration is perceived as a source of insecurity by many in that community. The central aim of this critical analysis is to explore ideas and practices which can contribute to replacing the political structures of insecurity with emancipatory structures, where individuals (both irregular migrants and members of the receiving communities) enjoy security together, not opposed to each other. Drawing on the security dilemma, critical approaches to security, forced migration and trust, the book demonstrates how common life between two groups of individuals can be politically constructed, in tandem with limitations, risks, and possible handicaps of initiating such a construction in world politics. *Rethinking Security in the Age of Migration* will be of interest to students and scholars of migration studies, security studies, international

relations, European politics and sociology.

Software Error Analysis Wendy W. Peng, Dolores R. Wallace, 1994-10

Engineering Secure and Dependable Software Systems A. Pretschner, P. Müller, P. Stöckle, 2019-08-06 Almost all technical systems currently either interface with or are themselves largely software systems. Software systems must not harm their environment, but are also often vulnerable to security attacks with potentially serious economic, political, and physical consequences, so a better understanding of security and safety and improving the quality of complex software systems are crucial challenges for the functioning of society. This book presents lectures from the 2018 Marktoberdorf summer school Engineering Secure and Dependable Software Systems, an Advanced Study Institute of the NATO Science for Peace and Security Programme. The lectures give an overview of the state of the art in the construction and analysis of safe and secure systems. Starting from the logical and semantic foundations that enable reasoning about classical software systems, they extend to the development and verification of cyber-physical systems, which combine computational and physical components and have become pervasive in aerospace, automotive, industry automation, and consumer appliances. Safety and security have traditionally been considered separate topics, but several lectures in this summer school emphasize their commonalities and present analysis and construction techniques that apply to both. The book will be of interest to all those working in the field of software systems, and cyber-physical systems in particular.

The Next Medo-Persian Empire W. Richard Viall, 2021-02-25 As a military police officer forty-four years ago, author W. Richard Viall made a traffic stop of an evangelical Christian woman. The interaction with her serendipitously raised his curiosity about the end times, and throughout his thirty-seven-year career in law enforcement, he maintained his curiosity regarding the subject. Ultimately, Richard learned many mainstream Christians

regard the fictional account of end times in the Left Behind series of books as fact. He truly wishes the initial rapture would be as easy as the books make it out to be. But he sees nothing in the Bible to indicate that. Based on logic and allegorical and literal interpretation, The Next Medo-Persian Empire presents Richard's deductions on the prophecy. He discusses what will happen in the time leading up to the rapture and during the last seven years after. It explains the signs leading to the end and how the next Medo-Persian Empire will be one of those signs.

Ethical Security Studies Jonna Nyman, Anthony Burke, 2016-03-02 At a time of grave ethical failure in global security affairs, this is the first book to bring together emerging theoretical debates on ethics and ethical reasoning within security studies. In this volume, working from a diverse range of perspectives—poststructuralism, liberalism, feminism, just war, securitization, and critical theory—leading scholars in the field of security studies consider the potential for ethical visions of security, and lay the ground for a new field: ethical security studies. These ethical 'visions' of security engage directly with the meaning and value of security and security practice, and consider four key questions: • Who, or what, should be secured? • What are the fundamental grounds and commitments of different security ethics? • Who or what are the most legitimate agents, providers or speakers of security? • What do ethical security practices look like? What ethical principles, arguments, or procedures, will generate and guide ethical security practices? Informed by a rich understanding of the intellectual and historical experience of security, the contributors advance innovative methodological, analytical, political and ethical arguments that represent the cutting edge of the field. This book opens a new phase of collaboration and growth that promises to have great benefits for the more humane, effective and ethical practice of security politics. This book will be of much interest to students of critical security studies, ethics, philosophy, and international relations.
