The Land of Open Graves Jason De Leon,2015-10-23 In his gripping and provocative debut, anthropologist Jason De León sheds light on one of the most pressing political issues of our time—the human consequences of US immigration policy. The Land of Open Graves reveals the suffering and deaths that occur daily in the Sonoran Desert of Arizona as thousands of undocumented migrants attempt to cross the border from Mexico into the United States. Drawing on the four major fields of anthropology, De León uses an innovative combination of ethnography, archaeology, linguistics, and forensic science to produce a scathing critique of “Prevention through Deterrence,” the federal border enforcement policy that encourages migrants to cross in areas characterized by extreme environmental conditions and high risk of death. For two decades, this policy has failed to deter border crossers while successfully turning the rugged terrain of southern Arizona into a killing field. In harrowing detail, De León chronicles the journeys of people who have made dozens of attempts to cross the border and uncovers the stories of the objects and bodies left behind in the desert. The Land of Open Graves will spark debate and controversy.

Easy Arabic Grammar Mahmoud Gaafar,Jane Wightwick,2005-07-05 An exceptionally clear and accessible reference and workbook for anyone who wants to learn Arabic Easy Arabic Grammar is both a handy grammar reference and a primer/workbook for beginning to intermediate-level students of Arabic. Clear structural explanations and practice activities make it a perfect companion for formal language classes as well as any self-teaching course.

Ischemic Stroke of Brain Pratap Sanchetee,2018 The stroke is the third leading cause of death and disability across the globe. We have evolved from a sense of frustration and helplessness to proactive and effective management in the hyperacute and acute phase of a stroke. The aim is to salvage the ischemic brain and turn it again into a viable and functional one. Advances in imaging and newer therapeutic strategies of this devastating illness have changed our outlook. The modern management of an ischemic stroke involves intravenous thrombolysis within a window period of four and half hours. Endovascular management with newer stent retrievers has a higher rate of recanalization with an extended therapeutic window. A new era has emerged in the management of ischemic stroke treatment. This book, written by experts, aims to improve the understanding of stroke medicine for postgraduate medical students in medicine and neurology who have an interest in stroke care.

Heterostructured Materials Xiaolei Wu,Yuntian Zhu,2021-11-24 Heterostructured (HS) materials represent an emerging class of materials that are expected to become a major research field for the communities of materials, mechanics, and physics in the next couple of decades. One of the biggest advantages of HS materials is that they can be produced by large-scale industrial facilities and technologies and therefore can be commercialized without the scaling up and high-cost barriers that are often encountered by other advanced materials. This book collects recent papers on the progress in the field of HS materials, especially their fundamental physics. The papers are arranged in a sequence of chapters that will help new researchers entering the field to have a quick and comprehensive understanding of HS materials, including the fundamentals and recent progress in their processing, characterization, and properties.

Circulating Biomarkers in Patients with Head and Neck Cancer and the Influence of Cigarette Smoking Bengt-Åke Andersson,2019-11-19 Head and neck cancer (HNC) is a collective name for heterogeneous tumors located in the head and neck regions for which smoking, alcohol and human papillomavirus (HPV) are documented risk factors. The survival of HNC patients has only improved marginally during the last decade. The most important prognostic factors are tumor size, local spread and distant metastases, tumor node metastasis (TNM) staging. Prognostic biomarkers are needed as a complement to TNM staging. The aim for this thesis was to investigate rapid and low cost blood based biomarkers which could indicate the risk of HNC, recurrence of the disease or the survival of HNC patients. Furthermore, the aim was to examine how cigarette smoking influences the levels of biomarkers. In paper I, a possible role of plasma cytokines or proteins associated with immune response or inflammation, as biomarkers for the survival of HNC patients was investigated. Higher levels of C-reactive protein (CRP) and tumor necrosis factor alpha (TNF-?) were detected in plasma of the patients compared with the levels in the controls. The elevated levels of these two biomarkers detected in patients were associated with decreased survival. In paper II, the influence of 45 single nucleotide polymorphisms (SNPs) located in 41 genes associated with cell cycle progression, cell death, DNA repair or immune response on cancer risk, tumor recurrence and survival in HNC patients were investigated. SNPs in immune response genes were associated with risk for HNC, an elevated risk for recurrence and a decreased survival in HNC patients. In paper III, the influence of cigarette smoking on levels of inflammatory cells, proteins or cytokines/chemokines, microRNAs (miRNAs) and SNPs was analysed in healthy smokers and non-smokers. Higher levels of total white blood cells (WBCs), neutrophils, monocytes, lymphocytes, neutrophil to lymphocyte ratio (NLR), CRP, monocyte chemoattractant protein- 1 (MCP-1) and interferon gamma (IFN-?) were detected in smokers compared to non-smokers and indicate an inflammatory response. Also, a lower level of oncomiRNA miR-21 was detected in smokers. This alteration, in combination with the elevated levels of IFN-? in smokers could be a protective response to cigarette smoke. The higher levels of IFN-? in smokers compared to non-smokers were however only detected in individuals with SNP rs2069705 genotype AG/GG. This indicates a genetic association of the levels of IFN-?. In paper IV, the separate effects of cigarette smoking and HNC on inflammatory or immune biomarkers and the impact of high risk human papillomavirus, age and gender were investigated. Comparisons of circulating levels of WBCs and its subpopulations, plasma proteins or cytokines/chemokines between smoking and non-smoking patients, smoking and non-smoking controls and between the patient and control groups were analysed. Smoking had highest impact on elevated levels of WBCs, IFN-? and MCP-1, and HNC had highest impact on elevated levels of neutrophils, monocytes, NLR, CRP, macrophage inflammatory protein 1 beta and TNF-?. In conclusion, host immune response associated parameters could be suitable as biomarkers for the risk of HNC, risk of recurrence or in predicting survival of HNC patients. This thesis show that HNC are associated with systemic inflammatory response and upregulated CRP and TNF-? is related to shorter survival in HNC patients. Additionally, SNPs in immune response genes such as rs1800629 in the TNF-? gene indicates a risk for HNC or an elevated risk for recurrence and a decreased survival in HNC patients. These rapid and low cost blood based biomarkers could be used in combination or as a supplement to established biomarkers in the clinic for a more personalized treatment modality.

Huvud- och halscancer (HH-cancer) innefattar tumörer belägna i huvud och halsområdet. Tobaksrökning ökar risken dramatiskt för olika sjukdomar. Knappt hälften av rökande patienter dör i de av rökning orsakade sjukdomarna. Cancer är orsaken till en tredjedel av de rökrelaterade dödsfallen av vilka HH-cancer är en. En andel av patienterna med HH-cancer dör på grund av att tumören varit för stor redan vid diagnos eller att tumören har spridit sig till övriga delar av kroppen. Men för många patienter är det mycket oklart vad som bestämmer behandlingsresultatet. Tumörerna är till synes lika och behandlingen standardiserad. Målet med denna doktorsavhandling var att undersöka billiga och lättillgängliga biologiska markörer som kan indikera risk för att drabbas av HH-cancer eller om dessa markörer kan förutspå behandlingsresultat och överlevnad hos de drabbade patienterna. Dessutom undersöktes hur cigarettrökning påverkade nivåerna av markörerna. I studie I, undersöktes om molekyler i blodet (biomarkörer), förknippade med immunförsvaret, kunde förutsäga överlevnaden hos HH-cancerpatienter. I jämförelse med friska individer sågs högre nivåer av molekylerna TNF-? och CRP hos patienterna och dessa förhöjningar var relaterade till förkortad överlevnad hos patienterna. I studie II, var målet att undersöka om variationer i gener, förknippade med immunförsvaret, celldelning, celldöd eller enzymer som reparerar skadat DNA, kunde påverka risk och prognos för HH-cancer. Resultatet visade framför allt att små ärftliga variationer i gener som reglerar immunförsvaret kunde påverka risk för HH-cancer, risk för återfall i sjukdomen samt överlevnaden hos patienterna. I studie III, jämfördes inflammatoriska och immunförknippade biomarkörer som kunde påverkas av cigarettrökning mellan friska rökare och friska icke-rökare. Rökarna hade en högre inflammatorisk aktivitet med högre nivåer av totalt antal vita blodkroppar och tre av dess olika undergrupper (neutrofiler, monocyter och lymfocyter) samt av biomarkörerna CRP, MCP-1 och IFN-?. De

funna lägre nivåerna av den cancerförknippade biomarkören miR-21 och högre nivåer av den förmodat skyddande biomarkören IFN- γ hos rökarna, kan vara ett uttryck för kroppens försvar mot den cancerframkallade cigarettroken. Ärftliga faktorer tycks kunna påverka de högre nivåerna av IFN- γ hos rökarna, eftersom ökningen endast fanns i en grupp individer med viss typ av genetisk uppsättning. Eftersom både rökning och HH-cancer ger upphov till inflammation, undersöktes i studie IV hur dessa var för sig påverkade nivåerna av inflammatoriska biomarkörer. Detta för en bättre förståelse hur immunförsvaret reagerar på rökning och HH-cancer. Jämförelser av inflammatoriska markörer från rökande och icke-rökande patienter, och rökande och ickerökande friska individer genomfördes. Rökning hade störst påverkan på de högre nivåerna av totalt antal vita blodkroppar och signalmolekylerna MCP-1 och IFN- γ . HH-cancer hade störst påverkan på högre nivåerna av neutrofiler, monocyter, kvoten mellan neutrofiler och lymfocyter, CRP, MIP-1b och TNF- α . Uppkomsten av HH-cancer, behandlingsresultat och överlevnad bland patienterna kan antas inte bara bero på tumörens egenskaper, utan även på värdfaktorer hos patienten. Dessa kan vara ärftliga, eller bero på reglering av gener eller tumörens omgivning av t.ex. immunceller och inflammatoriska molekyler och hur dessa samverkar med miljöfaktorer som tobaksrökning. I denna avhandling presenteras biomarkörer som kan bidra med information om risk och prognos för HH-cancer samt hur tobaksrökning påverkar dessa markörer.

Practical Transfusion Medicine Michael F. Murphy, Derwood H. Pamphilon, 2013-07-03 Highly Commended - 2010 BMA Medical Book Awards An essential, practical manual for all those working in transfusion medicine Concise and user-friendly guide to transfusion medicine Focuses on clinical aspects but also covers background science and organizational issues Complications encountered in transfusion are addressed throughout Highlights controversial issues and provides advice for everyday clinical questions in transfusion medicine This comprehensive guide to transfusion medicine takes a practical and didactic approach. The third edition of this text includes many new contributions and has expanded to seven sections. The first of these takes the reader systematically through the principles of transfusion medicine. The second deals with the complications which can arise in transfusion and is followed by a section on the practice of transfusion in blood centres and hospitals. The fourth section covers clinical transfusion practice and the fifth looks at alternatives to transfusion. Section six addresses cellular and tissue therapy and organ transplantation and the final section of the book examines the development of the evidence base for transfusion. As with previous editions; the final section includes a visionary chapter on future advances in the field. This new edition of Practical Transfusion Medicine benefits from even more international authorship than the previous two editions and is an invaluable resource for trainee doctors, scientists, technicians and other staff in haematology and transfusion and as a reference book for clinical staff in haematology and other disciplines faced with specific problems.

Mastering Arabic 2 Jane Wightwick, Mahmoud Gaafar, 2020-02-12 This full colour text comes with free audio and video online through an accompanying website. It is a modern, engaging, intermediate Arabic course offering lively conversations, varied texts and exercises, and fascinating cultural insights. The course is highly illustrated in full colour with photos and cartoons and includes an abundance of exercises to aid learning and encourage practice in listening, speaking, reading and writing. It is backed up by online exercises including a link to interactive flashcards, and is supported by a range of additional activity, grammar and handwriting books. The course follows on from the best-selling Mastering Arabic 1 but is suitable for any learner with some prior knowledge of Arabic. The Mastering Arabic series is widely used in universities, schools, community colleges, adult evening classes and for self-study.

Stripe Rust Xianming Chen, Zhensheng Kang, 2017-07-11 This book comprehensively introduces stripe rust disease, its development and its integral control. Covering the biology, genetics, genome, and functional genomics of the pathogen, it also discusses host and non-host resistance, their interactions and the epidemiology of the disease. It is intended for scientists, postgraduates and undergraduate studying stripe rust, plant pathology, crop breeding, crop protection and agricultural science, but is also a valuable reference book for consultants and administrators in agricultural businesses and education.

The Deanna Protocol(r) Vincent M Tedone M D, Vincent Tedone, Deanna Tedone-Gage, Chara Tedone, 2015-09-10 The authors are in a life and death struggle against a terrible disease, Amyotrophic Lateral Sclerosis, which is referred to as ALS or Lou Gehrig's disease. If you or a loved one have been diagnosed with ALS, then you need to read this book. The Deanna Protocol(r) program was discovered by Dr. Tedone, Deanna's father, only after failing, again and again, with everything that he tried. The massage, non-exhausting exercise and core supplements are inexpensive and available without prescription from many suppliers. The program works for many ALS patients. It is not a cure; however, it provides a better quality of life and has been shown in ALS mice to extend life and improve motor skills. The rate of progression of ALS symptoms reported in ALSFRS scores, is markedly reduced in those adhering to the Deanna Protocol(r) program. There are few side effects reported, and those are manageable for most, if the program is phased in, gradually, over time. The main stream pharmaceutical giants and neurologists have taken little notice or remain skeptical about any program targeting metabolic support of motor neurons. However, we are winning over some of the skeptics, when they see, first-hand, how much their own patients are benefiting from the Deanna Protocol(r) program. An investigation at the University of South Florida has shown that SOD1-G93A mice live longer and better when on the core supplements of the Deanna Protocol(r) program. To our knowledge, the Deanna Protocol(r) program is the only program tested on these particular mice that has ever shown a statistically significant extension of life compared to controls. We were not surprised, because the program already showed effectiveness in Deanna and many other patients with ALS (PALS). More surprising to us is the anecdotal evidence that the core supplements of the Deanna Protocol(r) program helps patients with other neurological conditions, such as Alzheimer's. An investigation of these other conditions is beyond our foundation's capability. We don't have sufficient assets to meet the needs for research into ALS. Much of the costs of the progress made to date have been borne by the Tedone's and a short list of donors to Winning the Fight, Inc., a foundation established by the Tedone family. If the foundation had more money, the research could progress much faster in ALS and other neurological conditions could be included, which have shown benefits to patients from taking the core supplements of the Deanna Protocol(r) program. The authors are convinced that there is a common denominator among many neurological conditions that could, potentially, benefit from the Deanna Protocol(r) program or some program based on the core supplements of the Deanna Protocol(r) program. Possibly, Alzheimer's, Parkinson's, stroke, traumatic brain injury and other neurological conditions could all share a common pathway for neuron cell death, a lack of energy in the cells. The authors believe that one of the supplements taken as part of the Deanna Protocol(r) program provides energy to distressed cells in which normal cellular metabolism has been disrupted. From research completed after the manuscript for this book was written, Dr. Tedone believes that many of these neurological conditions could benefit from a program tailored toward keeping more of the neurons from dying. This Preface and an Afterword have been added to the soft cover edition of this book. If you are interested in our efforts to discover a metabolic program for benefiting the health of patients with neurological conditions resulting in neuron cell death, then turn to the Afterword for a discussion on our evolving hypothesis. Also, the Deanna Protocol(r) program continues to evolve over time as more research is conducted and more PALS report their results to us. Breast Cancer Diagnosis Gerald S. Johnston, 1975-11 Breast carcinoma is a dreaded disease. The incidence of breast cancer, which appears to be increasing, is 1 in 1500 women with an annual death rate of 4,000 from this disease in the United States (1). It is a cancer which threatens its victims with mutilation as well as early death. Although response to therapy has not been good, improved methods for earlier and more complete diagnosis are providing hope for better results. When a woman presents herself for routine breast examination, what diagnostic procedures are indicated? If a breast mass is present, what diagnostic and therapeutic methods are employed? When the mass proves to be malignant, what then? Should biopsy and

mastectomy be a combined procedure? Should a positive biopsy be followed by a complete diagnostic work-up before definitive therapy is undertaken? While some answers may seem obvious and others less obvious, common medical practices vary considerably in response to all of these situations. No easy formula exists. Each patient must be given individual consideration and her* treatment carefully planned to incorporate all the diagnostic findings. Experience to date indicates that some diagnostic and therapeutic procedures have established efficacy while others are not very helpful and still others need more evaluation before their usefulness can be . assessed fully. Traditionally, treatment of breast cancer has been surgical. Through the years poor results from surgery, along with acquisition of knowledge of the lymphatic spread of this malignancy, prompted more and more extensive surgical procedures.

Easy Arabic Reader Jane Wightwick,Mahmoud Gaafar,2011-04-15 The bestselling Easy Reader series, with its distinctive three-part structure that leads beginners to intermediate-level comprehension, now offers Arabic - and aids learners with audio recordings of selected readings from the book freely accessible online. About the Book The highly successful Easy Reader series is based on the distinctive approach that the best way to build language skills is to start reading it. Suitable for beginners to intermediate-level learners, this book features engaging readings of progressive difficulty that allow readers to rapidly build comprehension. Review sections and comprehension questions are integrated throughout the text to reinforce what is learned through the readings. This book, divided into three parts, begins with a series of stories about an Arab-American as he takes a tour of the Middle East as a graduation present. In the second part, readers are introduced to key figures of Arab History, from Saladin, who fought the Crusades, to Said Ouita, the Moroccan Olympic runner. Finally, learners encounter adapted stories from tradition sources like the 1001 Arabian Nights, with a humorous modern slant. Complementing this bestselling series is an online component that provides a tremendous new dimension for beginning learners. A free-access website provides recordings of many of the readings contained in the book - providing learners with a perfect way to recognize unknown words and improve their pronunciation. Features Easy Reader series has excellent track record: 140,000+ copies sold of all editions. No other book on the market offers beginner-level Arabic readings. Convenient audio format allows listening online. Growing audience: study of Arabic has grown since 2000, but there are limited materials to progress beyond beginner.
