Introductory Experiments on Biomolecules and their Interactions Robert K. Delong,Qiongqiong Zhou,2015-03-06 Introductory Experiments on Biomolecules and their Interactions provides a novel approach to teaching biomolecules in the lab. While featuring the requisite fundamentals, it also captures the author's experience in industry, thus providing unique, up-to-date experiments which take the learning experience one-step further. The text parallels lectures using a standard biochemistry undergraduate text. Unlike most current lab manuals available in the market which simply emphasize an introduction of techniques, this lab manual provides students with opportunities to demonstrate and prove the knowledge and theories they learn from class. Features quantitative analysis of RNA degradation by RNase Contains problem sets, calculations, and references for each lab fully immersing students in the learning process Includes instruction on how to maintain a lab notebook and write a formal lab report Provides hands-on engagement with the four major types of biomolecules and "real-life and better applied examples of molecular interactions

Molecular Biology Techniques Walt Ream,Katharine G. Field,1998-11-17 This manual is designed as an intensive introduction to the various tools of molecular biology. It introduces all the basic methods of molecular biology including cloning, PCR, Southern (DNA) blotting, Northern (RNA) blotting, Western blotting, DNA sequencing, oligo-directed mutagenesis, and protein expression. Key Features * Provides well-tested experimental protocols for each technique * Lists the reagents and preparation of each experiment separately * Contains a complete schedule of experiments and the preparation required * Includes study questions at the end of each chapter

Laboratory Investigations in Cell Biology Allyn A. Bregman,1987 Contained in this text are 18 laboratory projects that explore the structural, biochemical and physiological nature of eukaryotic cells. Topics are largely traditional; however, several investigations employ new methodologies. Extended coverage of biochemistry is offered, and materials have been selected for availability and ease of handling: eg. extraction of DNA and RNA done with calf liver; succinate dehydrogenase activity studied in mitochondria isolate from cauliflower.
