The First Outstanding 50 Years of “Università Politecnica delle Marche” Sauro Longhi,Andrea Monteriù,Alessandro Freddi,Lucia Aquilanti,Maria Gabriella Ceravolo,Oliana Carnevali,Mario Giordano,Gianluca

Moroncini,2020-01-02 The book describes the significant multidisciplinary research findings at the Università Politecnica delle Marche and the expected future advances. It addresses some of the most dramatic challenges posed by today’s fast-growing, global society and the changes it has caused. It also discusses solutions to improve the wellbeing of human beings. The book covers the main research achievements in the various disciplines of the life sciences, and includes chapters that highlight mechanisms relevant to all aspects of human diseases, the molecular, cellular, and functional basis of therapy, and its translation into the management of people’s health needs. It also describes research on traditional and innovative foods to enhance quality, safety and functionality, and to develop bioactive/nutraceutical compounds. Further chapters address conservation and management of various environments, from the forests to the oceans, describing the studies on countermeasures against climate changes and terrestrial/aquatic pollutants, and on terrestrial/marine biodiversity, ecosystems and landscapes, erosion of genetic biodiversity, innovative aquaculture feed, sustainable crop production and management of forests. Lastly, the book reports the findings of research work on different classes of biomolecules, and on the molecular basis of antibiotic resistances and their diffusion.

Copahue Volcano Franco Tassi,Orlando Vaselli,Alberto Tomas Caselli,2015-09-21 This book provides a comprehensive description of the volcanological, petrological and geochemical features of the Copahue volcano, located at the border between Argentina and Chile. Scientific studies are limited for this volcanic system, due to its remote location and difficult access in winter. However, Copahue is one of the most active volcanic systems in the southern Andes. Monitoring the volcano's activity is of utter importance, as it provides means of existence for the nearby village of the same name, hosting the world's highest-located hot-springs resort. This book's aim is to present the current monitoring activities, and to describe future research programs that are planned in order to mitigate volcanic hazards. Special attention is therefore devoted to the social and industrial activities close to the volcano, such as health therapies and geothermal energy exploitation. In a special section, the Copahue volcano is presented as a terrestrial modern analog for early-Earth and Mars environments.

Stardom in Cinema, Television and the Web Vanni Codeluppi, 2021-03-01 In the last 50 years, the social importance of stars has steadily grown, to the point that stars have now become key role models who strongly influence people's behaviours. This book considers the connections between the three main media (cinema, television and the web) and each of the three phases into which the history of stardom can be divided. The first phase can largely be credited with the creation and codification of contemporary stardom, while the second is linked to the spread of television, which weakened the Hollywood stardom model and gradually transformed the figure of the star, making it more intimate and familiar. In the last of these phases, we have many 'outsiders' (personalities from a variety of professional domains and experiences) who are able to achieve considerable social visibility thanks to their skilful use of the web.
