Human-Computer Interaction. User Interface Design, Development and Multimodality Masaaki Kurosu, 2017-06-28 The two-volume set LNCS 10271 and 10272 constitutes the refereed proceedings of the 19th International Conference on Human-Computer Interaction, HCII 2017, held in Vancouver, BC, Canada, in July 2017. The total of 1228 papers presented at the 15 colocated HCII 2017 conferences was carefully reviewed and selected from 4340 submissions. The papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. They cover the entire field of Human-Computer Interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The papers included in this volume cover the following topics: HCI theory and education; HCI, innovation and technology acceptance; interaction design and evaluation methods; user interface development; methods, tools, and architectures; multimodal interaction; and emotions in HCI.

Fiber Optics Abdul Al-Azzawi, 2017-12-19 Since the invention of the laser, our fascination with the photon has led to one of the most dynamic and rapidly growing fields of technology. New advances in fiber optic devices, components, and materials make it more important than ever to stay current. Comprising chapters drawn from the author's highly anticipated book Photonics: Principles and Practices, Fiber Optics: Principles and Practices offers a detailed and focused treatment for anyone in need of authoritative information on this critical area underlying photonics. Using a consistent approach, the author leads you step-by-step through each topic. Each skillfully crafted chapter first explores the theoretical concepts of each topic, and then demonstrates how these principles apply to real-world applications by guiding you through experimental cases illuminated with numerous illustrations. The book works systematically through fiber optic cables, advanced fiber optic cables, light attenuation in optical components, fiber optic cable types and installations, fiber optic connectors, passive fiber optic devices, wavelength division multiplexing, optical amplifiers, optical receivers, opto-mechanical switches, and optical fiber communications. It also includes important chapters in fiber optic lighting, fiber optics testing, and laboratory safety. Containing several topics presented for the first time in book form, Fiber Optics: Principles and Practices is simply the most modern, detailed, and hands-on text in the field.

Sports Diplomacy Michał Marcin Kobierecki, 2020-05-19 This book analyzes the place and role of sport within public diplomacy, including theoretical conceptualizations of the category of sports diplomacy as a sub-category of public diplomacy and empirical research of selected examples of the use of sport within public diplomacy. The empirical part of the book refers to three approaches to sports diplomacy and concerns the utilization of sport by states in order to shape relations with other states, the role of sport in building the international image of a state and the diplomatic subjectivity of international sports organizations. In reference to the first two approaches, the book uses comparative case study in order to make observations and generalizations concerning sports diplomacy. Apart from that, the book includes a detailed study of the diplomatic subjectivity of the International Olympic Committee.

Photonics Abdul Al-Azzawi,2017-12-19 Since the invention of the laser, our fascination with the photon has led to one of the most dynamic and rapidly growing fields of technology. An explosion of new materials, devices, and applications makes it more important than ever to stay current with the latest advances. Surveying the field from fundamental concepts to state-of-the-art developments, *Photonics: Principles and Practices* builds a comprehensive understanding of the theoretical and practical aspects of photonics from the basics of light waves to fiber optics and lasers. Providing self-contained coverage and using a consistent approach, the author leads you step-by-step through each topic. Each skillfully crafted chapter first explores the theoretical concepts of each topic and then demonstrates how these principles apply to real-world applications by guiding you through experimental cases illuminated with numerous illustrations. Coverage is divided into six broad sections, systematically working through light, optics, waves and diffraction, optical fibers, fiber optics testing, and laboratory safety. A complete glossary, useful appendices, and a thorough list of references round out the presentation. The text also includes a 16-page insert containing 28 full-color illustrations. Containing several topics presented for the first time in book form, *Photonics: Principles and Practices* is simply the most modern, comprehensive, and hands-on text in the field.

Analysis of Multi-Temporal Remote Sensing Images Paul Smits,Lorenzo Bruzzone,2004-08-10 The development of effective methodologies for the analysis of multi-temporal data is one of the most important and challenging issues that the remote sensing community will face in the coming years. Its importance and timeliness are directly related to the ever-increasing quantity of multi-temporal data provided by the numerous remote sensing satellites that orbit our planet. The synergistic use of multi-temporal remote sensing data and advanced analysis methodologies results in the possibility of solving complex problems related to the monitoring of the Earth's surface and atmosphere at different scales. However, the advances in the methodologies for the analysis of multi-

temporal data have been significantly under-illuminated with respect to other remote sensing data analysis topics. In addition, the link between the end-users' needs and the scientific community needs to be strengthened. This volume of proceedings contains 43 contributions from researchers representing academia, industry and governmental organizations. It is organized into three thematic sections: Image Analysis and Algorithms; Analysis of Synthetic Aperture Radar Data; Monitoring and Management of Resources. Contents: Image Analysis and Algorithms: Extending Time-Series of Satellite Images by Radiometric Intercalibration (A Röder et al.) Trajectory of Dynamic Clusters in Image Time Series (P Heas et al.) Change Detection with ALI and Landsat Satellite Data (H Chen et al.) Analysis of Synthetic Aperture Radar Data: Multi-Temporal Interferometric Point Target Analysis (U Wegmüller et al.) Application of Multiple Baseline InSAR Data for DEM Generation (S Takeuchi) Joint Distributions for Multi-Temporal Series of Radar Images (B Storvik et al.) Monitoring and Management of Resources: Detection of Vegetation Changes in an Alpine Protected Area (M Maggi et al.) Monitoring Drought Stress in North-Eastern China by Means of Rainfall Data and Diachrone Indices Derived from Pathfinder AVHRR-Imagery (P Ozer et al.) Science for Society: Global Observations of Earth's Natural Resources in the 21st Century (R L King) and other papers Readership: Graduate students and researchers in computer science and environmental science. Keywords: Remote Sensing; Change Detection; Multi-Temporal Image Analysis; Pattern Recognition; Time Series Analysis; Environmental Monitoring; Environmental Management; Natural Resources; Earth Observation

Robot Intelligence Technology and Applications 6 Jinwhan Kim, Brendan Englot, Hae-Won Park, Han-Lim Choi, Hyun Myung, Junmo Kim, Jong-Hwan Kim, 2022-03-31 This book aims at serving the researchers and practitioners in related fields with a timely dissemination of the recent progress on robotics and artificial intelligence. This book is based on a collection of papers presented at the 9th International Conference on Robot Intelligence Technology and Applications (RiTA), held at KAIST in Daejeon, Korea, in a hybrid format, on December 16–17, 2021. Humankind is getting through the third year of COVID-19 pandemic. While this pandemic has made everyone's life so challenging, it has also expedited transition of our everyday lives into a new form, often called "the new normal." Although many people often use the terminology, perhaps we still do not have a consensus about what it is and what it should be like. One thing that is clear is that robotics and artificial intelligence technologies are playing critical roles in this phase transition of our everyday lives. We see last-mile delivery robots on the street, AI-embedded service robots in the restaurants, uninhabited shops, non-face-to-face medical services, conferences and talks in metaverses and AI-based online education programs. For better readability, the total of 53 papers are grouped into four chapters: Chapter I: Motion Planning and Control; Chapter II: Design and Robot Application; Chapter III: Sensing, Perception and Recognition; and Chapter IV: Cognition, Autonomy and Intelligence. For those who have research on robot intelligence technology, we believe this book will help them understand the recent robot technologies and applications and enhance their study.

Can America Remain Committed? David G. Haglund, 2019-04-02 The twelve months that spanned the period between the

early springtimes of 1991 and 1992 may well turn out to constitute the most important year for American foreign and security policy in half a century. Encasing the dawning of a new and different security era, like macabre parentheses, were two columns of black smoke-that of 1991 over the newly liberated Kuwait, and that of 1992 over the embattled district of South-Central Los Angeles. Within these acrid temporal brackets unfolded a set of developments of utmost significance for American foreign and security policy and for the very meaning of the country's external commitments.
