**Renewable and Scalable Energy Storage Materials Derived from Quinones in Biomass** Lianlian Liu, 2020-08-31 Currently there is an urgent need to reduce the use of fossil fuels, and efficient sustainable energy harvesters from sun and wind have been developed and are widely used for electricity generation. Storage of electrical energy is accordingly necessary to accommodate the time

varying supply of wind and solar electricity. Quinones (Q) are attractive as energy storage materials due to their high theoretical charge density and the renewable and abundant source – biomass. Plant-based biomass materials – such as lignin and humic acids – contain redox active Q-groups that potentially could be used for electricity storage instead of simply burning the biomass, which releases CO<sub>2</sub>, CH<sub>4</sub>, NO<sub>x</sub>, and SO<sub>x</sub>. Lignin accounts for 20-30% of the biomass weight and contains a sizable fraction of Q-structures. However, utilization of lignin for large scale energy storage is still a challenging task, as lignin is electrically insulating and conductive materials are required to get access to the generated electrons in the bulk. Various relatively expensive materials, such as conductive polymers and various carbon materials (carbon nanotubes, active carbon, graphene, etc.) have been combined with lignin, resulting in hybrid materials for energy storage. However, as the scale required for production of charge storage devices is huge it is of outmost importance to reduce the cost and therefore investigate low-cost conductive materials. In this thesis, common graphite flakes are combined with the lignin derivative liginosulphonate (LS) via a solvent free ball-milling process, followed

by treatment with water and resulting in a paste that can be processed into electrodes. Similarly, humic acid derived from peat, lignite that contains a large amount of Q-groups is also fabricated into electrode with graphite via the ball-milling process. In order to further reduce the impact on environment during the extraction of Q-materials from biomass, barks that contain as much as 30% of lignin are directly used for energy storage via co-milling with pristine graphite to generate the biomass/graphite hybrid material electrodes. However, larger weight fraction of Q are required to further improve the electrochemical performance of these electrodes and Q chemicals (QCs) that also originate from biomass are introduced to fabricate the QCs/graphite electrodes with an increased capacity. Additionally, self-discharge mechanism is studied on the LS/graphite hybrid material electrodes, which provides instructions to achieve a low self-discharge rate. Overall, this study has brought us one step forward on the establishing of scalable, sustainable, and cost-effective energy storage systems using aqueous electrolytes.

**Proceedings of the International Field Exploration and Development Conference 2018 Jia'en**

Lin,2019-10-02 This book gathers selected papers from the 8th International Field Exploration and Development Conference (IFEDC 2018) and addresses a broad range of topics, including: Reservoir Surveillance and Management, Reservoir Evaluation and Dynamic Description, Reservoir Production Stimulation and EOR, Ultra-Tight Reservoirs, Unconventional Oil and Gas Resources Technology, Oil and Gas Well Production Testing, and Geomechanics. In brief, the papers introduce readers to upstream technologies used in oil & gas development, the main principles of the process, and various related design technologies. The conference not only provided a platform to exchange experiences, but also promoted the advancement of scientific research in oil & gas exploration and production. The book is chiefly intended for industry experts, professors, researchers, senior engineers, and enterprise managers.

**Mineral Matter and Trace Elements in Coal** Shifeng Dai,Xibo Wang,Lei Zhao,2018-07-04 This

book is a printed edition of the Special Issue Minerals in Coal that was published in Minerals

Coal Geology of China Shifeng Dai, Robert B. Finkelman, 2020-04-28 ‘Coal’ and ‘China’ to some extent have become synonymous. China is by far the largest user of coal in the world. In 2016, coal production in China amounted to 3.21 billion tons, about half of the total global coal production. Coal consumption accounts for more than 65% of primary energy consumption in China. The Chinese coal industry greatly contributes to the economic development in China, the second largest economy in the world. However, periodically, ubiquitous images of smog blanketing major Chinese cities are viewed all over the world. Coal combustion is one of the important contributors to smog, which is considered to be a major environmental and human health problem for China and other countries. News stories also highlight the periodic coal mine disasters that kill hundreds of Chinese coal miners annually. The need to address these and other human health, environmental, and mine safety issues and to maximize resource recovery and use justifies a vigorous coal research effort. This book brings together experts on almost every aspect of coal geology, coal production, composition and use of the coal and its by-

products, and coal's environmental and human health impacts. The chapters in this book were originally published in a special issue of the International Geology Review.

*Young Rebels in Contemporary Chinese Cinema* Zhou Xuelin,2007-09-01 In the 1980s, a new type of central character emerged in contemporary Chinese films - angry and alienated youth. Filmmakers treated youth as a separate category and showed them in urban situations behaving in unconventional and socially rebellious ways. *Young Rebels in Contemporary Chinese Cinema* looks for evidence in films that exemplify this trend.

**The Oxford Handbook of Modern Chinese Literatures** Carlos Rojas, Andrea Bachner, 2016 Abstract:

Rather than attempt to offer a definition of modern Chinese literature or provide a comprehensive survey of all that the category might entail, this volume instead uses a series of strategic interventions to illustrate the structural conditions out of which modern Chinese literature has emerged, how it is viewed, and how it may be interpreted. Our goal, in other words, is to showcase a set of methodologies that one may use to approach modern Chinese literature, while in the process offering different ways of reassessing what modern Chinese literature is in the first place. We contend that modern Chinese literature is not a static category but rather it is a dynamic entity whose significance and limits are continually being reshaped through the process of interpretation itself. Similarly, modern Chinese literature is not a singular, unitary category, but rather a plurality of overlapping categories--of modern Chinese literatures. Divided into three parts, on structure, taxonomy, and methodology, this volume contains 46 original articles that examine unfamiliar texts and literary phenomena and offer new perspectives on more familiar ones

Payment schemes for forest ecosystem services in China J.F. Liang, 2023-09-04 Faced with intensified ecological crisis, the Chinese government has sought policy interventions to reverse its forest degradation. Among the policy instruments is the Payment for Ecosystem Services (PES) that aims to transform the pattern of traditional forest management and protection and to encourage forest sustainable use by financial incentive. This book provides a policy evaluation on the payment schemes for forest ecosystem services in China. It examines PES schemes with respect to ecological effectiveness, economic and livelihood impacts, participation of local people, and the interlinkages with forest tenure reform. The evaluation is based on different cases across China's main forested regions. The implementation of payment schemes in China shows improvements in forest management and protection and an incentive-based governance method is employed instead of 'command and control'. New forest use practices are also created to couple local livelihood requirements with ecological conservation. In addition, local farmers are more and more involved in the implementation of payment schemes. Providing a comprehensive assessment of payment policies for ecosystem services in

China, this book will be of great interest to policy-makers and government advisers in China, international donor agencies, and academics and students with an interest in PES and forest governance.
