Innovative ICT Industrial Architecture in East Asia Hitoshi Hirakawa, Nobuhiro Takahashi, Ferdinand C. Maquito, Norio Tokumaru, 2016-11-21 This book aims to shed light on the potentially innovative ICT (information and communication technology) architectures from an East Asian regional perspective. The business environment brought about by the development of ICT intensified global competition and caused dramatic changes in the industrial architecture. Firms that are involved in manufacturing and maintenance of ICT hardware and that offer services for software development are continuously being created, giving rise to the provision of new and diverse services to an increasingly growing East Asian regional market. Such industrial activities are advancing the shift from an old to a new industrial architecture. Some parts of emerging economies have grasped this edge on economic globalization and informatization and have adopted business models that enable them to enter the world economy. Entering this century, China, the Philippines, and Vietnam in East Asia have been rapidly expanding their ICT-BPO (Business Process Outsourcing) businesses as destinations of offshoring of service activities by firms in the advanced economies, following India's example. Policy makers and firms in those countries are also meeting the challenge of catching up with advanced economies through the development of such industries. It has enabled those economies to exploit new possibilities of further development, which may mean a new stage of manufacturing cum services in an ICT- and knowledge-based economy.

SmartMedia Tools: Bridging the Gap Between Generic Applications and Domain-Oriented Systems, 1995 Our intuitions regarding the usability and utility of generic versus domain-specific applications may be too simplistic. Empirical studies indicate that professional practitioners need both: (1) the rich, flexible formatting and editing features associated with generic tools, and (2) the supportive functionality offered by domain-specific tools. The problem is that today's tools are either generic (and flexible) or domain-specific (and supportive), but not both. SmartMedia Tools change this situation by supporting practitioners to bridge this gap and work at different points along the flexibility/support continuum. SmartMedia Tools enable practitioners to begin with generic graphic elements and to gradually enrich SmartMedia with domain-specific vocabularies and relationships using graphical refinement, naming, prototype definition, and attribute refinement.

Living in Smart Cities Thomas Menkhoff, Siew Ning Kan, Hans-Dieter Evers, Yue Wah Chay, 2017-12-28 Cities around the world are becoming increasingly popular as economic powerhouses and magnets for migrants from rural and suburban areas. All big cities in First and Third World countries as well as emerging markets such as New York, London, Tokyo, Paris, Shanghai, Hong Kong, Singapore, New Dehli, Jakarta etc. have to cope with high population density and serious challenges such as air pollution or traffic congestion. How do we pack more people into big cities and yet continue to realise a high quality of life? How do we plan, create and manage 'good cities' which are safe, spacious, green, connected, fair and resilient? How can cities create economic wealth while still fulfilling the vision of sustaining our Green Planet? What are best practice designs and innovative technical smart city solutions which could be leveraged to tackle these challenges and how can they be successfully commercialised? These are some of the questions the reader addresses from a multi-disciplinary perspective with special reference to Singapore whose development from regional entrepôt to First World Metropolis continues to impress business and societal leaders around the world.
